Introduction

Index Objective

The S&P Net Zero 2050 Climate Transition ESG Index Series and S&P Net Zero 2050 Paris-Aligned Climate ESG Index Series measure the performance of eligible equity securities from an underlying parent index selected and weighted to be collectively compatible with a 1.5°C global warming climate scenario¹ at the index level. The S&P Net Zero 2050 Paris-Aligned Climate ESG Index Series encompasses all the elements of the S&P Net Zero 2050 Climate Transition ESG Index Series, but are differentiated by their additional restrictiveness and ambition, seen through their additional constraints and eligibility requirements. The indices apply exclusions based on companies' involvement in specific business activities, violations of the principles of the United Nations' Global Compact (UNG), and involvement in relevant ESG controversies, all outlined in *Eligibility Criteria*.

Highlights

The indices aim to meet the minimum standards for EU Climate Transition Benchmarks (EU CTBs) and EU Paris-aligned Benchmarks (EU PABs) under Regulation (EU) 2019/2089 amending Regulation (EU) 2016/1011². The law proposes the definitions of minimum standards for the methodology of any 'EU Climate Transition' and 'EU Paris-Aligned' benchmark indices that would be aligned with the objectives of the Paris Agreement³, and addresses the risk of greenwashing. The indices also incorporate factors that seek to manage transition risk and climate change opportunities in a way that aligns them with the recommendations of the Financial Stability Board's Task Force on Climate-related Financial Disclosures' (TCFD) 2017 *Final Report*⁴, covering transition risk, climate change opportunities, and, for the S&P Net Zero 2050 Paris-Aligned Climate ESG Index Series, stranded asset, and physical risk.

Should a material change to the methodology be required as a consequence of any change made by the EU to the minimum standards for EU CTBs and/or EU PABs, S&P Dow Jones Indices will issue an announcement before the change is implemented (and in these circumstances, S&P Dow Jones Indices would not conduct a formal consultation). For clarity, any other methodology change will follow S&P Dow Jones Indices' standard processes, which may include a consultation.

Both index series' weighting strategies aim to minimize the difference in constituent weights to the underlying parent index. In addition, the indices incorporate a variety of specified decarbonization targets and align with certain specified criteria through the use of optimization with multiple model constraints, including:

- alignment to a 1.5°C climate scenario using Trucost's Transition Pathway Model
- reduced overall greenhouse gas (GHG expressed in CO₂ equivalents) emissions intensity compared to their respective underlying parent index by at least 30% and 50% for the S&P Net Zero 2050 Climate Transition ESG Index Series and S&P Net Zero 2050 Paris-Aligned Climate ESG Index Series respectively

¹ A climate scenario of 1.5°C above preindustrial levels has been deemed important by the IPCC: Masson-Delmotte, V., Zhai, P., Pörtner, H. O., Roberts, D., Skea, J., Shukla, P. R. Waterfield, T. (2018). Global warming of 1.5°C. An IPCC Special Report on the impacts of global warming of 1.5°C. IPCC, available at www.ipcc.ch/sr15.

² Pursuant to Articles 19(a)(2) and 19(b)(1) of Regulation (EU) 2019/2089, Commission Delegated Regulation (EU) 2020/1818 lays down the minimum standards for EU CTBs and EU PABs <https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=CELEX:32020R1818>.

³ UNFCCC. (2015). The Paris Agreement: <https://unfccc.int/process-and-meetings/the-paris-agreement/the-paris-agreement>.

⁴ Financial Stability Board's Task Force on Climate-related Financial Disclosures' (TCFD). (2017). *Final Report: Recommendations of the Task Force on Climate-related Financial Disclosures*, available at www.fsb-tcfd.org/wp-content/uploads/2017/06/FINAL-2017-TCFD-Report-11052018.pdf.

- minimum self-decarbonization rate of GHG emissions intensity in accordance with the trajectory implied by Intergovernmental Panel on Climate Change's (IPCC) most ambitious 1.5°C scenario, equating to at least 7% GHG intensity reduction on average per annum
- increased exposure to companies with Science Based Targets from the Science Based Target Initiative (SBTI) that are credible and consistent with the above decarbonization trajectory
- improved S&P Global ESG Score compared to the parent index
- exposure to sectors with high impact on climate change at least equivalent to the parent index
- managed exposure to potential climate change opportunities through controlled green-to-brown revenue share in order to align with the recommendations of the TCFD
- capped exposure to non-disclosing carbon companies
- constituent-level weight capping to address liquidity and diversification

In addition to those listed above, the S&P Net Zero 2050 Paris-Aligned Climate ESG Index Series incorporates further constraints to target:

- reduced exposure to physical risks from climate change using Trucost's Physical Risk dataset
- improved exposure to potential climate change opportunities through substantially higher green-to-brown revenue share compared to the parent index
- reduced exposure to fossil fuel reserves compared to the parent index

All indices in the series feature the exclusion of companies from the underlying parent index with:

- involvement in specific business activities
- non-compliant United Nations Global Compact (UNG) principle violations
- involvement in relevant ESG controversies

In addition to those listed above, the S&P Net Zero 2050 Paris-Aligned Climate ESG Index Series incorporates the further exclusion of companies whose revenues from coal, oil, or natural gas exploration or processing activities exceed defined thresholds, and electricity generation companies that exceed a stated revenues threshold.

Climate-Related Data

Trucost's Transition Pathway Model

The Trucost Transition Pathway approach is based on two models: the Sectoral Decarbonization Approach ("SDA") (Krabbe, et al., 2015)⁵, and the Greenhouse Gas Emissions per unit of Value Added Approach ("GEVA") (Randers, 2012)⁶, which are both recommended by the Science Based Targets Initiative (Science Based Targets Initiative, 2019).⁷

The approach allows for a forward-looking perspective on likely future greenhouse gas emissions, and uses a carbon budget allocation method to allocate each company a total amount of carbon emissions per year. These allocations allow companies, as a collective, to be 1.5°C aligned provided their emissions remain within the allocation budgets.

⁵ Krabbe, O., Linthorst, G., Blok, K., Crijns-Graus, W., van Vuuren, D., Höhne, N., Pineda, A. C. (2015). Aligning Corporate Greenhouse-Gas Emissions Targets with Climate Goals. *Nature Climate Change*.

⁶ Randers, J. (2012). Greenhouse gas emissions per unit of value added ("GEVA") – A corporate guide to voluntary climate action. *Journal Energy Policy*.

⁷ Science Based Targets Initiative. (2019, April). Science-Based Target Setting Manual, available at <https://sciencebasedtargets.org/wp-content/uploads/2017/04/SBTi-manual.pdf>.

The SDA approach is sector specific and is used for high emitting sectors.⁸ The SDA uses carbon intensity based on sector specific measures of output. For example, the unit of output for iron and steel companies is “tCO₂ per ton crude steel”. This allows an understanding of how carbon efficient companies are per unit of output. The SDA approach also sets carbon budgets for specific sectors as a whole, which allows some sectors to decarbonize more slowly where the opportunities for decarbonization are far lower. This is allowed by setting more aggressive targets for sectors with greater scope for decarbonization.

GEVA is applied to lower emitting or heterogeneous business activities. For GEVA, the unit of output used is gross profit. Companies have diverse business activities, most of which do not have distinct transition pathways defined in climate scenarios. For these companies, the methodology applies a contraction in carbon intensity principle under which a company should make emissions reductions. This is consistent with rates required for the overall economy, but from each company’s unique base year emissions intensity.

Trucost’s Physical Risk Data

Trucost’s Physical Risk dataset⁹ allows users to understand the risk and sensitivity of company assets to the physical risks of climate change. Climate modelling datasets and hazard models are overlaid with the asset locations of companies. Sensitivity analysis is carried out for each asset, to assess whether the company’s operations would be affected by each specific physical risk, based on the asset type.¹⁰

These climate modelling datasets and hazard models have been created for each specific physical risk. Physical risk is judged by a score ranging between 1 and 100. The physical risks covered include wildfire, cold wave, heatwave, water stress, sea level rise, flood, and hurricanes. The index methodology uses a composite physical risk score that is an average of all physical risk indicators, weighted for company specific sensitivity to each physical risk type.

Other Trucost Data Used: GHG Emissions, Emissions Disclosure Status, Green-to-Brown Share, Fossil Fuel Reserves, and Sector Revenues.

The indices are generated and published under agreements between S&P Dow Jones Indices and Trucost.

Any Trucost data with a financial year five years or more prior to the rebalancing reference date’s year is considered as not covered.¹¹

For information on Trucost’s methodology, please refer [here](#).

Science Based Target Initiative (SBTI)

The Science Based Targets initiative champions science-based target setting as a powerful way of boosting companies’ competitive advantage in the transition to a low-carbon economy. The initiative is a collaboration between CDP, World Resources Institute (WRI), the World Wide Fund for Nature (WWF), and the United Nations Global Compact (UNGC).

Targets adopted by companies to reduce greenhouse gas (GHG) emissions are considered “science-based” if they are in line with what the latest climate science says is necessary to meet the goals of the Paris Agreement—to limit global warming to well-below 2°C above pre-industrial levels and pursue efforts to limit warming to 1.5°C.

⁸ As referenced in section 5.7.2. of The EU Technical Expert Group on Sustainable Finance. (2019). *TEG Final Report on Climate Benchmarks and Benchmarks’ ESG Disclosures*, available at https://ec.europa.eu/info/files/190930-sustainable-finance-teg-final-report-climate-benchmarks-and-disclosures_en.

⁹ The 2050 High Climate Scenario is used.

¹¹ For more details, please see Appendix C.

For more information on the initiative, please refer to <https://sciencebasedtargets.org/>.

The S&P Global ESG Score

The indices use S&P Global ESG Scores. S&P Global Sustainable1 calculates these scores and derives them from the 'Corporate Sustainability Assessment' (CSA). A company's CSA score is derived using either company-provided data, publicly available information, or a combination thereof.

For more information on the CSA Process, please refer to www.spglobal.com/esg/csa.

For more information on S&P Global ESG Scores, please refer [here](#).

For the purposes of ESG assessment, companies are assigned to industries defined by S&P Global, and the assessment is largely specific to each industry. S&P Global uses the Global Industry Classification Standard (GICS®) as its starting point for determining industry classification. At the industry group and sector levels, the S&P Global CSA Industries match the standard GICS classifications, but some non-standard aggregations are done at the industry level.

For information on S&P Global CSA Industry-GICS Sub-Industry Mapping, please refer [here](#).

China Investor Perspective

Subject to S&P Dow Jones Indices' compliance with the applicable law (including, without limitation, sanctions law), the following indices are maintained from a China based investor perspective and may include securities that would not be eligible for inclusion if maintained from a U.S./U.K./EU investor perspective.

- S&P China A 300 Net Zero 2050 Climate Transition Index (NS Series)
- S&P China A 300 Net Zero 2050 Paris Aligned Index (NS Series)

Supporting Documents

This methodology is meant to be read in conjunction with supporting documents providing greater detail with respect to the policies, procedures and calculations described herein. References throughout the methodology direct the reader to the relevant supporting document for further information on a specific topic. The list of the main supplemental documents for this methodology and the hyperlinks to those documents is as follows:

Supporting Document	URL
S&P Dow Jones Indices' Equity Indices Policies & Practices Methodology	Equity Indices Policies & Practices
S&P Dow Jones Indices' Index Mathematics Methodology	Index Mathematics Methodology
S&P Dow Jones Indices' Float Adjustment Methodology	Float Adjustment Methodology
S&P Dow Jones Indices' Global Industry Classification Standard (GICS) Methodology	GICS Methodology

The methodology is created by S&P Dow Jones Indices to achieve the aforementioned objective of measuring the underlying interest of each index governed by this methodology document. Any changes to or deviations from this methodology are made in the sole judgment and discretion of S&P Dow Jones Indices so that the index continues to achieve its objective.

The Benchmark Administrator for the indices under this methodology is S&P DJI Netherlands B.V.

Eligibility Criteria

Index Universe

At each rebalancing reference date, the index universe for each index is all constituents of an underlying index:

S&P Net Zero 2050 Climate Transition ESG Index Series		Underlying Index
S&P 500 Net Zero 2050 Climate Transition ESG Index		S&P 500
S&P China LargeMidCap Net Zero 2050 Climate Transition ESG Index		S&P China LargeMidCap
S&P World Net Zero 2050 Climate Transition ESG Index		S&P World Index
S&P Emerging Plus LargeMidCap Net Zero 2050 Climate Transition ESG Index		S&P Emerging Plus LargeMidCap
S&P Europe LargeMidCap Net Zero 2050 Climate Transition ESG Index		S&P Europe LargeMidCap
S&P Eurozone LargeMidCap Net Zero 2050 Climate Transition ESG Index		S&P Eurozone LargeMidCap
S&P Global LargeMidCap Net Zero 2050 Climate Transition ESG Index		S&P Global LargeMidCap
S&P Japan LargeMidCap Net Zero 2050 Climate Transition ESG Index		S&P Japan LargeMidCap
S&P UK Net Zero 2050 Climate Transition ESG Index		S&P United Kingdom BMI
S&P/ASX 300 Net Zero 2050 Climate Transition ESG Index		S&P/ASX 300
S&P China A 300 Net Zero 2050 Climate Transition Index		S&P China A 300
S&P China A 300 Net Zero 2050 Climate Transition Index (NS Series)		S&P China A 300 (NS Series)

S&P Net Zero 2050 Paris-Aligned Climate ESG Index Series		Underlying Index
S&P 500 Net Zero 2050 Paris-Aligned ESG Index		S&P 500
S&P China LargeMidCap Net Zero 2050 Paris-Aligned ESG Index		S&P China LargeMidCap
S&P World Net Zero 2050 Paris-Aligned ESG Index		S&P World Index
S&P World Net Zero 2050 Paris-Aligned ESG Ex-Non-Pharma Animal Testing Index		
S&P Emerging Plus LargeMidCap Net Zero 2050 Paris-Aligned ESG Index		S&P Emerging Plus LargeMidCap
S&P Europe LargeMidCap Net Zero 2050 Paris-Aligned ESG Index		S&P Europe LargeMidCap
S&P Eurozone LargeMidCap Net Zero 2050 Paris-Aligned ESG Index		S&P Eurozone LargeMidCap
S&P Global LargeMidCap Net Zero 2050 Paris-Aligned ESG Index		S&P Global LargeMidCap
S&P Japan LargeMidCap Net Zero 2050 Paris-Aligned ESG Index		S&P Japan LargeMidCap
S&P UK Net Zero 2050 Paris-Aligned ESG Index		S&P United Kingdom BMI
S&P/ASX 300 Net Zero 2050 Paris-Aligned ESG Index		S&P/ASX 300
S&P China A 300 Net Zero 2050 Paris Aligned Index		S&P China A 300
S&P China A 300 Net Zero 2050 Paris Aligned Index (NS Series)		S&P China A 300 (NS Series)

For information on an underlying index, please refer to the respective index methodology, available at www.spglobal.com/spdji.

Eligibility Factors

Carbon Emissions Coverage. Companies must have Scopes 1, 2, and 3 (upstream and downstream) GHG emissions data, as provided by Trucost. Any Trucost data with financial year five years or more prior to the rebalancing reference date's year is considered as not covered.

Listing. For the indices listed below, constituents of the respective underlying index must be listed on an exchange in Europe or North America:

- S&P Europe LargeMidCap Net Zero 2050 Climate Transition ESG Index
- S&P Europe LargeMidCap Net Zero 2050 Paris-Aligned ESG Index
- S&P Eurozone LargeMidCap Net Zero 2050 Climate Transition ESG Index

- S&P Eurozone LargeMidCap Net Zero 2050 Paris-Aligned ESG Index

Index Exclusions

At each rebalancing reference date, the indices exclude companies from the eligible universe as described below:

Exclusion Type	S&P Climate Transition	S&P Paris-Aligned Climate
Exclusions Based on Business Activities ¹²	Applicable	Applicable
UNGC Principle Violations	Applicable	Applicable
Fossil Fuel Operations and Power Generation	Not Applicable	Applicable
Controversies: Media and Stakeholder Analysis	Applicable	Applicable

Exclusions Based on Business Activities

As of each rebalancing reference date, as relevant for each index family¹³, exclude the following:

- companies without coverage
- companies with the following specific business activities, using revenue as a proxy for all categories.

CT	PA	S&P Global Business Involvement	S&P Global Category of Involvement and Description	S&P DJI Level of Involvement Threshold	S&P DJI Significant Ownership Threshold
X	X	Controversial Weapons	Customized Weapons: The screen covers companies involved in the manufacturing of the components of a weapon. These components are intended solely for use in the production and are essential for the functioning of Anti-Personnel Mines, Biological and Chemical Weapons, Blinding Laser Weapons, Cluster Munitions, Depleted Uranium, Incendiary Weapons, and Nuclear Weapons.	>0%	≥25%
X	X	Tobacco	Production: The screen covers companies involved in the manufacturing of tobacco.	>0%	≥25%
X	X		Related Products and Services: The screen covers companies that supply essential products/services for the tobacco industry.	≥10%	N/A
X	X		Retail and Distribution: The screen covers companies involved in the retail and/or distribution of tobacco as part of their offerings.	≥5% for PA ≥10% for CT	N/A
	X	Small Arms	Production of Small Arms Weapons for Civilian Use: The screen covers the companies involved in the manufacturing of small arms weapons for civilian use.	>0%	N/A
	X		Production of Small Arms Weapons for Non-Civilian Use: The screen covers the companies involved that are involved in the manufacturing of small arms weapon for non-civilian use.	>0%	N/A
	X		Production of Key Components: The screen covers the companies involved in the manufacturing of key components for assault weapons.	>0%	N/A
	X		Retail and Distribution of Small Arms Weapons: The screen covers companies involved in the retail or distribution of small arms weapons for civilian customers.	>0%	N/A
	X	Military Contracting	Integral Military Weapons: The screen covers companies engaged in the manufacturing, assembling, sale and transportation of integral military weapons.	>0%	N/A
	X		Weapon Related: This screen covers companies engaged in the manufacturing and sales of weapon related products.	≥5%	N/A
X		Thermal Coal	Generation: The screen involves companies involved in the electricity generation using coal power plants.	≥5%	N/A

¹² The specific exclusions differ for each index family.

¹³ "CT" refers to the S&P Climate Transition Indices and "PA" to the S&P Paris-Aligned Climate Indices. An "X" indicates an active exclusion for that family.

S&P Global Business Involvement			S&P Global Category of Involvement and Description	S&P DJI Level of Involvement Threshold	S&P DJI Significant Ownership Threshold
CT	PA				
	X	Oil Sands or Tar Sands	Extraction and/or Production: The screen involves companies involved in the extraction and/or production of fossil fuels from Oil Sands/Tar Sands.	≥5%	N/A
	X	Shale Oil & Gas	Extraction and/or Production: The screen involves companies involved in the extraction and/or production of Shale oil and gas.	≥5%	N/A
	X	Gambling	Operations: The screen covers companies that own and/or operate a gambling establishment.	≥10%	N/A
	X	Alcohol	Production: The screen covers companies involved in the production of alcoholic beverages.	≥5%	N/A
	X		Related Products/Services: The screen covers companies that supply essential products/services for the alcoholic beverage industry.	≥10%	N/A
	X		Retail: The screen covers companies involved in the retail and/or distribution of alcoholic beverages as part of their offerings.	≥10%	N/A

Additional Index-Specific Business Activity Exclusions

S&P World Net Zero 2050 Paris-Aligned ESG Ex-Non-Pharma Animal Testing Index. In addition to the above, exclude companies with the following specific business activities, using revenues as a proxy:

S&P Global Business Involvement		S&P Global Category of Involvement and Description	S&P DJI Level of Involvement Threshold	S&P DJI Significant Ownership Threshold
Animal Welfare (Non-Pharmaceutical)		Household, Cosmetics and Personal Care Animal Testing: The screen covers companies that conducts or commissions animal testing for the final product or ingredients of household, cosmetic and personal care products.	>0%	≥25%
		Food and Beverage Animal Testing: The screen covers companies that conducts or commissions animal testing for the final product or ingredients of food and beverages	>0%	≥25%
		Chemicals Animal Testing: The screen covers companies that conducts or commissions animal testing for the final product or ingredients of chemicals.	>0%	≥25%
		Animal Testers and Breeders: The screen covers companies that conduct animal testing on behalf of other companies, and/or operates animal breeding facilities for animal testing.	>0%	≥25%
		Animal Testing Suspected: The screen covers companies that are suspected to be involved in animal testing due to their product offering.	>0%	N/A

Level of Involvement refers to the company's direct exposure to such products, while Significant Ownership indicates where the company has indirect involvement via some specified level of ownership of a subsidiary company with involvement.

For more information on the S&P Global Business Involvement Screens data set, please refer [here](#).

Exclusions Based on Sustainalytics' Global Standards Screening

Sustainalytics' Global Standards Screening (GSS) provides an assessment of a company's impact on stakeholders and the extent to which a company causes, contributes, or is linked to violations of international norms and standards. The basis of the GSS assessments is the UNGC Principles. Information regarding related standards is also provided in the screening, including the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, as well as their underlying conventions. Sustainalytics classifies companies into the following three statuses:

- **Non-Compliant.** Classification given to companies that do not act in accordance with the UNGC principles and its associated standards, conventions, and treaties.

- **Watchlist.** Classification given to companies that are at risk of violating one or more principles, for which all dimensions for Non-Compliant status could not be established or confirmed.
- **Compliant.** Classification given to companies that act in accordance with the UNGC principles and its associated standards, conventions, and treaties.

As of each rebalancing reference date, exclude the following:

- companies without coverage
- companies classified as Non-Compliant

Please refer to www.sustainalytics.com for more information.

Exclusions Based on Revenue Thresholds in Fossil Fuel Operations and Power Generation

As of each rebalancing reference date, exclude companies whose sum of revenues derived from the relevant sectors breach the below revenue thresholds:

Exclusion Type	Trucost Revenue Sectors	Revenue Threshold
Coal Exploration or Processing	Bituminous Coal and Lignite Surface Mining Bituminous Coal Underground Mining All Other Petroleum and Coal Products Manufacturing Pipeline Transportation	≥ 1%
Oil Exploration or Processing	All Other Petroleum and Coal Products Manufacturing Crude Petroleum and Natural Gas Extraction Drilling Oil and Gas Wells Support Activities for Oil and Gas Operations Petroleum Lubricating Oil and Grease Manufacturing Mining and Oil and Gas Field Machinery Manufacturing Tar Sands Extraction Petroleum Refineries Petrochemical Manufacturing Pipeline Transportation	≥ 10%
Natural Gas Exploration or Processing	Crude Petroleum and Natural Gas Extraction Drilling Oil and Gas Wells Support Activities for Oil and Gas Operations Mining and Oil and Gas Field Machinery Manufacturing Natural Gas Liquid Extraction Natural Gas Distribution Industrial Gas Manufacturing Pipeline Transportation	≥ 50%
Power Generation	Coal Power Generation Petroleum Power Generation Natural Gas Power Generation Biomass Power Generation	≥ 50%

These exclusions use a sector revenues dataset from Trucost.

Controversies Monitoring: Media and Stakeholder Analysis Overlay

In addition to the above, S&P Global uses RepRisk for daily filtering, screening, and analysis of ESG risk incidents and controversial activities related to companies within the indices.¹⁴ In cases where risks are presented, S&P Global releases a Media and Stakeholder Analysis (MSA), which includes a range of issues such as economic crime and corruption, fraud, illegal commercial practices, human rights issues, labor disputes, workplace safety, catastrophic accidents, and environmental disasters.

The Index Committee reviews constituents flagged by S&P Global's MSA to evaluate the potential impact of controversial company activities on the composition of the indices. If the Index Committee decides to

¹⁴ RepRisk, an ESG data science company, leverages the combination of AI and machine learning with human intelligence to systematically analyze public information in 23 languages and identify material ESG risks. With daily data updates across 100+ ESG risk factors, RepRisk provides consistent, timely, and actionable data for risk management and ESG integration across a company's operations, business relationships, and investments.

remove a company in question, the company is ineligible for re-entry into the index for at least one full calendar year, beginning with the subsequent rebalancing.

For more information on RepRisk, please refer to www.reprisk.com. This service is not considered a direct contribution to the index construction process.

Multiple Classes of Stock

All publicly listed multiple share class lines are eligible for index inclusion subject to meeting the eligibility criteria. For more information regarding the treatment of multiple share classes, please refer to Approach A within the Multiple Share Classes section of S&P Dow Jones Indices' Equity Indices Policies & Practices Methodology. All publicly listed multiple share class lines of a company are assigned and assessed using the same S&P Global ESG score.

Index Construction

Constituent Selection

At each rebalancing, select the eligible constituents of each underlying index and form each index, subject to the optimization constraints below.

Constituent Weighting

At each rebalancing reference date, weights are determined to minimize the sum of the squared difference between the parent weight for each constituent (i) and its optimized weight, divided by its parent weight, subject to constraints. The objective function is as follows:

$$\text{Minimize} \left(\frac{1}{n} \sum \left[\frac{(\text{Optimized Weight}_i - \text{Parent Weight}_i)^2}{\text{Parent Weight}_i} \right] + \frac{1}{k} \sum \left[\frac{(\text{Optimized Sector Weight}_i - \text{Parent Sector Weight}_i)^2}{\text{Parent Sector Weight}_i} \right] + \frac{1}{m} \sum \left[\frac{(\text{Optimized Country Weight}_i - \text{Parent Country Weight}_i)^2}{\text{Parent Country Weight}_i} \right] \right)$$

For the indices listed below, the underlying index used as a reference for the optimization process has the weight of stocks not listed on European or North American exchanges transferred to other eligible share class lines from the same company (if available):

- S&P Europe LargeMidCap Net Zero 2050 Climate Transition ESG Index
- S&P Europe LargeMidCap Net Zero 2050 Paris-Aligned ESG Index
- S&P Eurozone LargeMidCap Net Zero 2050 Climate Transition ESG Index
- S&P Eurozone LargeMidCap Net Zero 2050 Paris-Aligned ESG Index

Optimization Constraints

As of each rebalancing reference date, the optimizer seeks to minimize the above objective function for each index in the series while satisfying the below constraints.

Table 1. Transition Risk Constraints

Constraint*	S&P Climate Transition Index Series	S&P Paris-Aligned Climate Index Series	Data Source
1.5°C Climate Scenario Transition Pathway Budget Index Alignment	See Table 2 for index specific constraint values.		Trucost
Weighted-average Carbon Intensity (WACI) Target	$\leq \text{underlying WACI} \times 70\% \times \text{Buffer}^{**}$	$\leq \text{underlying WACI} \times 50\% \times \text{Buffer}$	Trucost
7% Decarbonization Trajectory WACI Target	$\leq \text{AnchorWACI}^{***} \times \frac{(1-7\%)^{(q/4)}}{1+Inf} \times \text{Buffer}$ where: q = number of rebalances since index anchor date Inf = Enterprise Value Including Cash (EVIC) growth of parent index since index Anchor Date ¹⁵		Trucost
Weight of Eligible Science Based Targets Companies	$\geq 120\% \times \text{weight of group in underlying index}$		Trucost / Science Based

¹⁵ The index 'Anchor Date' is the date of the reference index composition and base carbon intensity calculation used to determine the index's decarbonization trajectory. Please see *Appendix E* for more details.

Constraint*	S&P Climate Transition Index Series	S&P Paris-Aligned Climate Index Series	Data Source
			Targets Initiative
Weighted-average S&P Global ESG Score (waESG) ^{16****}	≥ of eligible index waESG	≥ underlying index waESG after 20% of the lowest ESG scoring stocks by count are removed and their weight redistributed****	S&P Global
High Climate Impact Sectors Revenue Proportion (HCISRP)	≥ HCISRP of underlying index		Trucost
Weight of Non-Disclosing Carbon Companies	≤ 110% × weight in underlying index		Trucost
Fossil Fuel Reserves (FFR)	≤ FFR of underlying index	≤ 20% × FFR of underlying index	Trucost

* Constraints are defined in *Constraint-Related Definitions* below.

** Where Buffer = 95% to represent a 5% margin to allow for drift between targeted and realized WACI.

*** WACI of index on the index's Anchor Date. Prior to the index's anchor date, the 7% decarbonization Trajectory WACI Target was calculated based on the index Inception Date.

**** For details about treatment of companies without a S&P Global ESG Score, please see *Appendix C*.

***** The calculation of the lowest 20% of stocks by ESG Score selects stocks with ESG scores less than the ESG score associated with the 20th percentile of ESG scores among all stocks in the underlying index.

Table 2. Transition Pathway Constraint Alignment Value

Index	1.5°C Climate Scenario Transition Pathway Budget Index Alignment Constraint
S&P 500 Net Zero 2050 Climate Transition ESG Index

	USD	1 billion
	EUR	

¹⁷ Constraints relating to existing constituents do not apply to the historical rebalance on the index 'Anchor Date'. Please see Appendix E for more details on the 'Anchor Date'.

Index	Liquidity Currency	Notional Portfolio Size
S&P UK Net Zero 2050 Climate Transition ESG Index	GBP	500 million
S&P UK Net Zero 2050 Paris-Aligned ESG Index		
S&P/ASX 300 Net Zero 2050 Climate Transition ESG Index	AUD	1 billion
S&P/ASX 300 Net Zero 2050 Paris-Aligned ESG Index		
S&P Japan LargeMidCap Net Zero 2050 Climate Transition ESG Index	JPY	100 billion

Constraint Relaxation Hierarchy

If the optimization fails to find a solution, the optimizer partially relaxes each constraint in the order listed below, and repeats, if necessary, until a solution is found. In each attempt at optimization the constraints are further relaxed in the stated order, however, the Index Committee may revise the order of relaxation hierarchy if a particular constraint prevents the optimizer from finding a solution.

- Weighted-average S&P Global ESG Score
- Weighted-average Physical Risk Score
- Weight of Non-Disclosing Carbon Companies
- Diversification Absolute Max Stock Weight
- Diversification Relative Stock Weight
- Liquidity Max Stock Weight
- Fossil Fuel Reserves
- Physical Risk Max Stock Weight
- Green-to-Brown Revenue Share
- 1.5°C Climate Scenario Transition Pathway Budget Index Alignment

The following constraints are considered hard constraints and do not relax:

- Weighted-average Carbon Intensity (WACI) Target
- 7% Decarbonization Trajectory WACI Target
- High Climate Impact Sectors Revenue Proportion
- Weight of Eligible Science Based Targets Companies

Constraint-Related Definitions

1.5°C Climate Scenario Transition Pathway Budget Index Alignment

The alignment of the index¹⁸ is calculated as follows:

$$\sum w_i \times \frac{\text{Winsorized TPBA}_i}{\text{EVIC}_i}$$

where:

w_i = weight of the company i in the index

Winsorized TPBA_i = max (2.5 percentile of the TPBA of underlying index, TPBA_i)

EVIC_i = enterprise value including cash of the company i

The Transition Pathway Budget Alignment (TPBA) of each company i is calculated as the sum of the difference between a company's carbon budget and emissions (either realized or predicted) both using

¹⁸ For history prior to November 2018, only the realized GHG data available at that point-in-time was used in the calculation of the Transition Pathway Budget Alignment (i.e., Predicted GHG was included from December 2018 onwards).

history and future projections. A TPBA of 0 would be compatible with a 1.5°C climate scenario, a budget below 0 would be compatible with better than a 1.5°C climate scenario and a budget above 0 would not be compatible with a 1.5°C climate scenario.

This metric is calculated using the GHG emissions dataset and the 1.5°C Climate Transition Pathway Model Scenario dataset provided by Trucost.

Weighted-Average Carbon Intensity (WACI)¹⁹

$$\sum w_i \times \frac{GHG1_i + GHG2_i + GHG3_i}{EVIC_i}$$

where:

w_i = weight of the company i in the index

$GHG1_i$ = Scope 1 GHG emissions in tCO₂e for the company i

$GHG2_i$ = Scope 2 GHG emissions in tCO₂e for the company i

$GHG3_i$ = Scope 3²⁰ (upstream and downstream) GHG emissions in tCO₂e for the company i

$EVIC_i$ = enterprise value including cash of the company i

This metric is calculated using the GHG emissions dataset provided by Trucost.

Eligible Science Based Targets

Eligible Science Based Targets Companies are those companies with publicly disclosed near-term targets from the Science Based Targets Initiative (SBTI), subject to the following conditions:

1. The target is publicly disclosed and is 1.5°C aligned
2. The targets set include all scope 1, scope 2 and scope 3 (upstream and downstream) emissions
3. The company discloses their scope 1, scope 2 and scope 3 emissions sufficiently
4. Companies must show a 7% decarbonization year-on-year, for the past 3 years
5. Companies' targets must represent an annualized decarbonization rate of 7% when accounting for scopes 1, 2 and 3 (upstream and downstream) targets assuming the companies' current composition of emissions.

This metric is calculated using the GHG emissions dataset and the 1.5°C Climate Transition Pathway Model Scenario dataset provided by Trucost, and the register of approved science-based company targets from the SBTI.

High Climate Impact Sectors Revenue Proportion (HCISRP)

$$\frac{\sum w_i \times \frac{HCISR_i}{EVIC_i}}{\sum w_i \times \frac{TR_i}{EVIC_i}}$$

where:

w_i = weight of the company i in the index

$HCISR_i$ = revenue of the company i derived from High Climate Impact Sectors

TR_i = total revenue of the company i

¹⁹ Exclude companies without full GHG emissions coverage from the calculation.

²⁰ For history prior to February 2020 the WACI calculation for the S&P China A 300 Net Zero 2050 Climate Transition Index, S&P China A 300 Net Zero 2050 Paris-Aligned Index, S&P China A 300 Net Zero 2050 Climate Transition Index (NS Series), and S&P China A 300 Net Zero 2050 Paris-Aligned Index (NS Series) only used Scopes 1 and 2.

$EVIC_i$ = enterprise value including cash of the company i

High Climate Impact Sectors are defined by the follow NACE sections:

- Agriculture, Forestry and Fishing
- Mining and Quarrying
- Manufacturing
- Electricity, Gas, Steam and Air Conditioning Supply
- Water Supply; Sewerage, Waste Management and Remediation Activities
- Construction
- Wholesale and Retail Trade, Repair of Motor Vehicles and Motorcycles
- Transportation and Storage
- Real Estate Activities

NACE sections have been mapped to Trucost Sectors. This metric is calculated using the sector revenues dataset provided by Trucost.

For more information on High Climate Impact Sectors, including the classification of Trucost revenue sectors as either 'high' or 'low' climate impact sectors, please refer to the [Trucost Climate Impact Sectors Classification](#).

Non-Disclosing Carbon Companies

Non-disclosing carbon companies are those companies identified by Trucost as having insufficiently disclosed their GHG emissions (expressed in CO₂ equivalents). A 'Disclosed' status is achieved when Trucost identifies companies as having full or partial disclosure in its largest GHG emissions scope in absolute emissions terms (between scope 1 and 2).

This metric is calculated using the GHG emissions disclosure level dataset provided by Trucost.

Fossil Fuel Reserves (FFR)

$$\sum w_i \times \frac{\text{Fossil Fuel Reserves}_i}{EVIC_i}$$

where:

w_i = weight of the company i in the index

$Fossil Fuel Reserves_i$ = the embedded emissions (tCO₂) within the fossil fuel reserves owned by company i

$EVIC_i$ = enterprise value including cash of the company i

This metric is calculated using the fossil fuel reserves dataset provided by Trucost.

Green-to-Brown Revenue Share (GBR)

$$\frac{\sum w_i \times \frac{GR_i}{EVIC_i}}{\sum w_i \times \frac{BR_i}{EVIC_i}}$$

where:

w_i = weight of the company i in the index

GR_i = revenue of the company i derived from Green Sectors

BR_i = revenue of the company i derived from Brown Sectors

$EVIC_i$ = enterprise value including cash of the company i

S&P DJI defines Green Sectors as the following Trucost Sectors:

- Nuclear Electric Power Generation
- Biomass Power Generation
- Geothermal Power Generation
- Hydroelectric Power Generation
- Solar Power Generation
- Wave & Tidal Power Generation
- Wind Power Generation

S&P DJI defines Brown Sectors as the following Trucost Sectors:

- Coal Power Generation
- Petroleum Power Generation
- Natural Gas Power Generation

This metric is calculated using the sector revenues dataset provided by Trucost.

Please refer to www.trucost.com for more information.

Index Calculations

The indices calculate by means of the divisor methodology used in all S&P Dow Jones Indices' equity indices.

For more information on the index calculation methodology, please refer to the Non-Market Capitalization Weighted Indices and Capped Market Capitalization Weighted Indices sections, respectively, of S&P Dow Jones Indices' Index Mathematics Methodology.

Index Maintenance

Rebalancing

The indices rebalance quarterly, effective after the close of the third Friday of March, June, September, and December. The rebalancing reference date for each rebalance is the third Friday of the prior month. As part of the rebalancing process, constituent stock weights are updated. Weights calculated as a result of the reference date data are implemented in the indices using closing prices seven business days prior to the rebalancing effective date.

S&P Dow Jones Indices monitors UNGC compliance on a best-efforts basis until the initial announcement of the rebalancing results. If a company's UNGC compliance status changes any time prior to the rebalancing results announcement and no longer qualifies for the index, S&P Dow Jones Indices may, at its discretion, exclude the company in conjunction with the rebalancing.

Ongoing Maintenance

Index constituents are drawn from the underlying index or component indices. Specific changes to index constituents, such as share changes, Investable Weight Factor (IWF) changes, dividend distributions, and price adjustments, follow the policies of the underlying index.

For more information on Share Updates, Float Adjustment, and IWFs, please refer to S&P Dow Jones Indices' Equity Indices Policies & Practices Methodology and S&P Dow Jones Indices' Float Adjustment Methodology.

The indices are reviewed on an ongoing basis to account for corporate events such as mergers, takeovers, delistings, suspensions, spin-offs/demergers, or bankruptcies. Changes to index composition and related weight adjustments are made as soon as they are effective. These changes are typically announced prior to the implementation date.

Quarterly Updates

Changes to a constituent's shares and IWF as a result of the quarterly updates are effective after the close on the third Friday in March, June, September, and December.

Additions and Deletions

Additions. Except for spin-offs, no stocks are added to the indices between rebalance dates. Spinoffs are added to all indices where the parent security is a constituent at a zero price at the market close of the day before the ex-date (with no divisor adjustment) and are removed after at least one day of regular way trading (with a divisor adjustment).

Deletions. If a stock is dropped from an underlying index, it is also removed from the respective S&P Net Zero 2050 Climate Transition ESG Index Series and S&P Net Zero 2050 Paris-Aligned Climate ESG Index Series indices simultaneously. Between rebalancings, a stock can be deleted from an index due to corporate events such as mergers, takeovers, delistings, suspensions, spin-offs/demergers, or bankruptcies.

In addition, at the discretion of the Index Committee, a deletion may occur if an MSA is raised.

Corporate Actions

For more information on Corporate Actions, please refer to the Non-Market Capitalization Indices section of S&P Dow Jones Indices' Equity Indices Policies & Practices Methodology.

Currency of Calculation and Additional Index Return Series

The indices calculate in euros and U.S. dollars.

WMR foreign exchange rates are taken daily at 4:00 PM London Time and used in the calculation of the indices. These mid-market fixings are calculated by WMR based on LSEG data and appear on LSEG pages.

In addition to the indices detailed in this methodology, additional return series versions of the indices may be available, including, but not limited to the following: currency, currency hedged, decrement, fair value, inverse, leveraged, and risk control versions. For a list of available indices, please refer to the [S&P DJI Methodology & Regulatory Status Database](#).

For information on various index calculations, please refer to S&P Dow Jones Indices' Index Mathematics Methodology.

For the inputs necessary to calculate certain types of indices, including decrement, dynamic hedged, fair value, and risk control indices, please refer to the Parameters documents available at www.spglobal.com/spdji.

Base Dates and History Availability

Index Data

Calculation Return Types

S&P Dow Jones Indices calculates multiple return types which vary based on the treatment of regular cash dividends. The classification of regular cash dividends is determined by S&P Dow Jones Indices.

- Price Return (PR) versions are calculated without adjustments for regular cash dividends.
- Gross Total Return (TR) versions reinvest regular cash dividends at the close on the ex-date without consideration for withholding taxes.
- Net Total Return (NTR) versions, if available, reinvest regular cash dividends at the close on the ex-date after the deduction of applicable withholding taxes.

In the event there are no regular cash dividends on the ex-date, the daily performance of all three indices will be identical.

For a complete list of indices available, please refer to the daily index levels file (“.SDL”).

For more information on the classification of regular versus special cash dividends as well as the tax rates used in the calculation of net return, please refer to S&P Dow Jones Indices’ Equity Indices Policies & Practices Methodology.

For more information on the calculation of return types, please refer to S&P Dow Jones Indices’ Index Mathematics Methodology.

Index Governance

Index Committee

An S&P Dow Jones Indices Index Committee maintains the indices. The Index Committee meets regularly. At each meeting, the Index Committee reviews pending corporate actions that may affect index constituents, statistics comparing the composition of the index to the market, companies that are being considered as candidates for addition to the index, and any significant market events. In addition, the Index Committee may revise index policy covering rules for selecting companies, treatment of dividends, share counts or other matters.

S&P Dow Jones Indices considers information about changes to its indices and related matters to be potentially market moving and material. Therefore, all Index Committee discussions are confidential.

S&P Dow Jones Indices' Index Committees reserve the right to make exceptions when applying the methodology if the need arises. In any scenario where the treatment differs from the general rules stated in this document or supplemental documents, clients will receive sufficient notice, whenever possible.

In addition to the daily governance of indices and maintenance of index methodologies, at least once within any 12-month period, the Index Committee reviews the methodology to ensure the indices continue to achieve the stated objectives, and that the data and methodology remain effective. In certain instances, S&P Dow Jones Indices may publish a consultation inviting comments from external parties.

For information on Quality Assurance and Internal Reviews of Methodology, please refer to S&P Dow Jones Indices' Equity Indices Policies & Practices Methodology.

Index Policy

Announcements

All index constituents are evaluated daily for data needed to calculate index levels and returns. All events affecting the daily index calculation are typically announced in advance via the Index Corporate Events report (.SDE), delivered daily to all clients. Any unusual treatment of a corporate action or short notice of an event may be communicated via email to clients.

Pro-forma Files

In addition to the corporate events file (.SDE), S&P Dow Jones Indices provides constituent pro-forma files each time the indices rebalance. The pro-forma file is typically provided daily in advance of the rebalancing date and contains all constituents, and their corresponding weights and index shares effective for the upcoming rebalancing.

Please visit www.spglobal.com/spdji for a complete schedule of rebalancing timelines and pro-forma delivery times.

Holiday Schedule

The indices calculate daily, throughout the calendar year. The only days an index is not calculated are on days when all exchanges where an index's constituents are listed are officially closed or if WM/Reuters' exchange rates services are not published.

A complete holiday schedule for the year is available at www.spglobal.com/spdji.

Rebalancing

The Index Committee may change the date of a given rebalancing for reasons including market holidays occurring on or around the scheduled rebalancing date. Any such change will be announced with proper advance notice where possible.

Unexpected Exchange Closures

For information on Unexpected Exchange Closures, please refer to S&P Dow Jones Indices' Equity Indices Policies & Practices Methodology.

Recalculation Policy

For information on the recalculation policy, please refer to S&P Dow Jones Indices' Equity Indices Policies & Practices Methodology.

For information on Calculations and Pricing Disruptions, Expert Judgment and Data Hierarchy, please refer to S&P Dow Jones Indices' Equity Indices Policies & Practices Methodology.

Contact Information

For any questions regarding an index, please contact: index_services@spglobal.com.

Index Dissemination

Index levels are available through S&P Dow Jones Indices' Web site at www.spglobal.com/spdji, major quote vendors (see codes below), numerous investment-oriented Web sites, and various print and electronic media.

Tickers

The table below lists headline indices covered by this document. All versions of the below indices that may exist are also covered by this document. Please refer to the [S&P DJI Methodology & Regulatory Status Database](#) for a complete list of indices covered by this document.

Appendix A

Physical Risk Max Stock Weight Constraint

This constraint is designed to avoid excessively overweighting companies with high physical risk score. The constraint is applied in proportion to the weight in the parent index.

$$\text{Strategy Weight}_i \leq A_i * \text{Parent Weight}_i$$

where:

$$A_i = \rho * \frac{\text{Physical Risk Score}_i - 100}{\text{Physical Risk Score}_i - 10},$$

$$\text{and } \rho = \frac{\text{Physical Risk Score 95th percentile} - 10}{\text{Physical Risk Score 95th percentile} - 100}$$

where *Physical Risk Score 95th percentile* is the Physical Risk Score value greater than the 95% of the parent index

This constraint is only applied to companies that have a Physical Risk Score higher than 10 and such that $A_i \leq 4$.

Any stock with Physical Risk value greater than *Physical Risk Score 95th percentile* cannot have a weight greater than its parent index weight ($A_i \leq 1$). If the Physical Risk score is 100, A_i will be zero.

For example, for the indices where the 95th percentile Physical risk value for the stocks in the universe is 40, if a company has a Physical Score of 30 and a weight in the parent of 2%, the maximal allowed weight in the S&P Paris-Aligned and Climate Transition (PACT) Index Series is $2\% * 1.75 = 3.5\%$. If instead its Physical Risk Score were 70 the maximum allowed weight would be $2\% * 0.25 = 0.5\%$.

The following table shows the values of the multiplier A for each Physical Risk Score rounded to the third decimal point, for when the 95th percentile Physical risk value for the stocks in the universe is 40.

Physical Risk Score	A						
20	4.000	40	1.000	60	0.400	80	0.143
21	3.591	41	0.952	61	0.382	81	0.134

						100	0.000

Appendix B

1.5°C Climate Scenario Transition Pathway Budget Index Alignment Constraint

For the indices where the 1.5°C Climate Scenario Transition Pathway Budget Index Alignment constraint is not zero, the value of C is used as the constraint.

At each rebalancing reference date, C is defined as the Transition Pathway Budget Alignment (TPBA)²¹ of a specific underlying index stock that represents where the sum of Absolute Transition Pathway Budget Contributions for stocks with a TPBA below C is closest to 5% of the sum of Absolute Transition Pathway Budget Contributions for stocks with a TPBA above C.

The following steps describe the calculation of C in more detail:

1. Sort stocks by their TPBA values in ascending order (see *Table 7*).
2. Calculate the 'Transition Pathway Budget Contribution' for all stocks in the universe, by multiplying their TPBA by their weight in the underlying index as at the rebalancing reference date.
3. For each stock i calculate (S_i) as the sum of Absolute Transition Pathway Budget Contributions for all the stocks with a TPBA that is lower or equal than that of stock i .
4. For each stock i calculate (T_i) as the sum of Absolute Transition Pathway Budget Contributions for all the stocks with a TPBA that is higher than that of stock i .
5. The value C is the 1.5°C Climate Scenario Transition Pathway Budget Index Alignment constraint for the index and is defined as the TPBA of the stock whose $\frac{S_i}{T_i}$ ratio is closest to 5%. This can also be stated as the TPBA of the stock with the minimum absolute value of $\frac{S_i}{T_i}$ ratio minus 5% ($|\frac{S_i}{T_i} - 0.05|$).
 - If C is less than zero, zero is used instead.
 - If $C \geq [50\% \times (\text{weighted average TPBA of underlying index})]$ then C is set to equal $[50\% \times (\text{weighted average TPBA of underlying index})]$.

The following table illustrates an example of how to calculate the value C. The $\frac{S_i}{T_i}$ ratio value of 0.050575 (shown in bold in second-to-last column) is the closest $\frac{S_i}{T_i}$ ratio to 5%, just as the $|\frac{S_i}{T_i} - 0.05|$ value in that column is the lowest among all others. Therefore C will be taken to be equal to 10, as it is the Transition Pathway Budget Index Alignment constraint. It is also greater than 0 and less than half of the weighted average of the parent (40.89 \times 50%).

²¹ The Transition Pathway Budget Alignment (TPBA) of each company i is calculated as the sum of the difference between a company's carbon budget and emissions (either realized or predicted) both using history and future projections. A TPBA of 0 would be compatible with a 1.5°C climate scenario, a budget below 0 would be compatible with better than a 1.5°C climate scenario and a budget above 0 would not be compatible with a 1.5°C climate scenario.

Table 7. Transition Pathway Budget Alignment Value Calculation Example

Stock	Transition Pathway Budget Alignment (TPBA)	Underlying Index Weight	Transition Pathway Budget Contribution	Absolute Transition Pathway Budget Contribution	S_i	T_i	$\frac{S_i}{T_i}$	$ \frac{S_i}{T_i} - 0.05 $
Stock A	-24	3%	-0.72	0.72	0.72	43.11	0.016701	0.033299
Stock B	-3	25%	-0.75	0.75	1.47	42.36	0.034703	0.015297
Stock C	4	6%	0.24	0.24	1.71	42.12	0.040598	0.009402
Stock D	10	4%	0.40	0.40	2.11	41.72	0.050575	0.000575
Stock E	27	9%	2.43	2.43	4.54	39.29	0.115551	0.065551
Stock F	55	19%	10.45	10.45	14.99	28.84	0.519764	0.469764

TOTAL		100%	40.89	43.83				

Appendix C

Data Coverage Treatment

For companies without coverage for the data points described below, values are assigned according to the following table:

Data	Value Assigned
Transition Pathway	The index's 1.5°C Climate Scenario Transition Pathway Budget Index Alignment
Physical Risk	The underlying index's Weighted-average Physical Risk Score
Green-to-Brown Share	0
Fossil Fuel Reserves	0
Sector Revenues	0
S&P Global ESG Score	The underlying index's waESG after excluding companies without an S&P Global ESG Score from the calculation

Appendix D

Methodology Changes

Methodology changes since April 20, 2020, are as follows:

Change	Effective Date (After Close)	Previous	Methodology	Updated
ESG Score Data	06/21/2024	The index uses S&P DJI ESG Scores as part of the constituent selection process.	The indices use S&P Global ESG Scores as part of the constituent selection process.	
Exclusions Based on Business Activities:	06/21/2024	Sustainalytics provides the data for exclusions based on business activities	S&P Global provides the data for exclusions based on business activities.	
Data Provider				
Eligibility Factors:	03/15/2024	-	Carbon Emissions Coverage: Companies must have GHG emissions data, as provided by Trucost. Any Trucost data with a financial year five years or more prior to the rebalancing reference date's year is considered not covered.

Backward Data Assumption

The index employs a “Backward Data Assumption” method for some datapoints used in the derivation of historical index membership prior to the Live Data Effective Date (defined below). The “Backward Data Assumption” method involves applying the earliest available actual live data point for an index constituent to all prior, historical instances of that constituent in the index universe.

Backward Data Assumption affects only the historical, hypothetical constituents of any index back-test. Only actual live data is ever used in live index rebalancings and in the historical rebalancing calculation of an index after its Live Data Effective Date.

For more information on S&P DJI’s principles and processes for using Backward Data Assumption, please refer to the [FAQ](#).

Designated Datasets Subject to Backward Data Assumption

The Backward Data Assumption within the historical back-test, with respect to the indices identified above, applies only to designated datasets and associated time horizons as defined below. For each designated dataset, all historical rebalancing events prior to the Live Data Reference Date listed below are subject to use of the Backward Data Assumption.

Data Provider	Designated Dataset	Live Data Reference Date	Live Data Effective Date
Trucost	Physical Risk	2/28/2020	3/31/2020
Trucost	Scope 3 Emissions	2/28/2020	3/31/2020

The Live Data Reference Date refers to the first rebalancing reference date from which only actual live data is used.

The Live Data Effective Date refers to the first date from which index constituents are determined solely on actual live data for each respective dataset.

Historical Coverage Assessment per Designated Dataset

Appendix G

ESG Disclosures

EXPLANATION OF HOW ENVIRONMENTAL, SOCIAL & GOVERNANCE (ESG) FACTORS ARE REFLECTED IN THE KEY ELEMENTS OF THE BENCHMARK METHODOLOGY ²²			
1.	Name of the benchmark administrator.	S&P DJI Netherlands B.V.	
2.	Underlying asset class of the ESG benchmark. ²³	Equity	
3.	Name of the S&P Dow Jones Indices benchmark or family of benchmarks.	S&P Paris-Aligned & Climate Transition (PACT) Index Family Benchmark Statement	
4.	Do any of the indices maintained by this methodology take into account ESG factors?	Yes	
5.	If the response to (4) is "Yes," the indices stated here take into account ESG factors.	For a list of the benchmarks within this family that take in account ESG factors, please refer to the S&P DJI Methodology & Regulatory Database .	
6.	Where the response to (4) is 'Yes', the section below lists those ESG factors that are taken into account by the ESG indices governed by the methodology, including those ESG factors listed in Annex II to Delegated Regulation (EU) 2020/1816.		
6.a List of environmental factors considered	ESG Factor ²⁴	S&P DJI ESG Factor	Comment
	Exposure of the benchmark portfolio to climate-related physical risks, measuring the effects of extreme weather events on companies' operations and production or on the different stages of the supply chain (based on issuer exposure) (voluntary).	Physical Risk Constraint: <i>Weighted-average Physical Risk Score; Physical Risk Max Stock Weight</i>	Weighting. For more information, please refer to the 'Index Construction' section of the methodology.
	Weighted average ESG rating of the benchmark (voluntary).	<i>Weighted-average S&P Global ESG Score</i>	Weighting. For more information, please refer to the 'Index Construction' section of the methodology.
	Degree of exposure of the portfolio to the sectors listed in Sections A to H and Section L of Annex I to Regulation (EC) No 1893/2006 of the European	<u>Transition Risk Constraints: High Climate Impact Sectors Revenue Proportion (HCISRP)</u>	Weighting. For more information, please refer to the 'Index Construction' section of the methodology.

²² The information contained in this Appendix is intended to meet the requirements of the European Union Commission Delegated Regulation (EU) 2020/1817 supplementing Regulation (EU) 2016/1011 of the European Parliament and of the Council as regards the minimum content of the explanation of how environmental, social and governance factors are reflected in the benchmark methodology and the retained EU law in the UK [The Benchmarks (amendment and Transitional Provision) (EU Exit) Regulations 2019].

²³ The 'underlying assets' are defined in European Union Commission Delegated Regulation (EU) 2020/1816 supplementing Regulation (EU) 2016/1011 of the European Parliament and of the Council as regards the explanation in the benchmark statement of how environmental, social and governance factors are reflected in each benchmark provided and published.

²⁴ 'ESG factors' are defined in Annex II of European Union Commission Delegated Regulation (EU) 2020/1816 supplementing Regulation (EU) 2016/1011 of the European Parliament and of the Council as regards the explanation in the benchmark statement of how environmental, social and governance factors are reflected in each benchmark provided and published.

EXPLANATION OF HOW ENVIRONMENTAL, SOCIAL & GOVERNANCE (ESG) FACTORS ARE REFLECTED IN THE KEY ELEMENTS OF THE BENCHMARK METHODOLOGY ²²			
6.b List of social factors considered.	Parliament and of the Council as a percentage of the total weight in the portfolio.		
	Greenhouse gas (GHG) intensity of the benchmark.	Transition Risk Constraints: <i>Weighted-average Carbon Intensity (WACI) Target; 7% Decarbonization Trajectory WACI Target</i>	Weighting. For more information, please refer to the 'Index Construction' section of the methodology.
	Percentage of GHG emissions reported versus estimated.	Transition Risk Constraints: <i>Weight of Non-Disclosing Carbon Companies</i>	Weighting. For more information, please refer to the 'Index Construction' section of the methodology.
	N/A	Transition Risk Constraints: <i>Fossil Fuel Reserves</i>	Weighting. For more information, please refer to the 'Index Construction' section of the methodology.
	N/A	Transition Risk Constraints: <i>1.5°C Climate Scenario Transition Pathway Budget Index Alignment</i>	Weighting. For more information, please refer to the 'Index Construction' section of the methodology.
	N/A	Transition Risk Constraints: <i>Eligible Science Based Targets Companies</i>	Weighting. For more information, please refer to the 'Index Construction' section of the methodology.
	N/A	Climate Opportunities Constraints: <i>Green-to-Brown Revenue Share (GBR)</i>	Weighting. For more information, please refer to the 'Index Construction' section of the methodology.
	N/A	Fossil Fuel Operations and Power Generation	Exclusion. For more information, please refer to the 'Eligibility Criteria' section of the methodology.
	N/A	Controversies Monitoring: Media and Stakeholder Analysis	Exclusion. For more information, please refer to the 'Eligibility Criteria' section of the methodology.
	N/A	Business Activities: <i>Thermal Coal</i>	Exclusion. For more information, please refer to the 'Eligibility Criteria' section of the methodology.
	N/A	Business Activities: <i>Oil Sands or Tar Sands</i>	Exclusion. For more information, please refer to the 'Eligibility Criteria' section of the methodology.
	N/A	Business Activities: <i>Shale Oil & Gas</i>	Exclusion. For more information, please refer to the 'Eligibility Criteria' section of the methodology.
	International treaties and conventions, United Nations principles or, where applicable, national law used in order to determine what constitutes a 'controversial weapon'.	Business Activities: <i>Controversial Weapons</i>	Exclusion. For more information, please refer to the 'Eligibility Criteria' section of the methodology.
	Weighted average percentage of benchmark constituents in the controversial weapons sector.	Business Activities: <i>Controversial Weapons</i>	Exclusion. For more information, please refer to the 'Eligibility Criteria' section of the methodology.
	Weighted average percentage of benchmark constituents in the tobacco sector.	Business Activities: <i>Tobacco</i>	Exclusion. For more information, please refer to the 'Eligibility Criteria' section of the methodology.
	Number of benchmark constituents subject to social violations (absolute number and relative divided by all benchmark constituents), as referred to in international	UNGC Non-Compliant Companies	Exclusion. For more information, please refer to the 'Eligibility Criteria' section of the methodology.

EXPLANATION OF HOW ENVIRONMENTAL, SOCIAL & GOVERNANCE (ESG) FACTORS ARE REFLECTED IN THE KEY ELEMENTS OF THE BENCHMARK METHODOLOGY ²²			
	treaties and conventions, United Nations principles and, where applicable, national law.		
	Weighted average ESG rating of the benchmark (voluntary).	<i>Weighted-average S&P Global ESG Score</i>	Weighting. For more information, please refer to the ' <i>Index Construction</i> ' section of the methodology.
	N/A	Controversies Monitoring: Media and Stakeholder Analysis	Exclusion. For more information, please refer to the ' <i>Eligibility Criteria</i> ' section of the methodology.
	N/A	Business Activities: <i>Small Arms</i>	Exclusion. For more information, please refer to the ' <i>Eligibility Criteria</i> ' section of the methodology.
	N/A	Business Activities: <i>Military Contracting</i>	Exclusion. For more information, please refer to the ' <i>Eligibility Criteria</i> ' section of the methodology.
	N/A	Business Activities: <i>Gambling</i>	Exclusion. For more information, please refer to the ' <i>Eligibility Criteria</i> ' section of the methodology.
	N/A	Business Activities: <i>Alcohol</i>	Exclusion. For more information, please refer to the ' <i>Eligibility Criteria</i> ' section of the methodology.
6.c List of governance factors considered.	Weighted average ESG rating of the benchmark (voluntary).	<i>Weighted-average S&P Global ESG Score</i>	Weighting. For more information, please refer to the ' <i>Index Construction</i> ' section of the methodology.
	N/A	Controversies Monitoring: Media and Stakeholder Analysis	Exclusion. For more information, please refer to the ' <i>Eligibility Criteria</i> ' section of the methodology.
7.	Data and standards used.		
7.a	Data sources, verification and quality of data.	<p>The datasets are defined as either:</p> <ul style="list-style-type: none"> - Reported: All data in the dataset are provided as disclosed by companies, or as stated in the public domain. - Modeled: All data are derived using a proprietary modelling process with only proxies used in the creation of the dataset. - Reported and Modeled: The dataset is either a mix of reported and Modeled data or is derived by the vendor using reported data/information in a proprietary scoring or determination process. <p>The index methodology uses the following ESG datasets.</p>	
	Data Source.	Dataset.	
	S&P Trucost Limited (a part of S&P Global) (external data source)	<p>This methodology uses several datasets provided by S&P Trucost Limited:</p> <ul style="list-style-type: none"> • Transition pathway model (Reported and Modeled) • Physical risk scores dataset (Reported and Modeled) • Greenhouse gas emissions and emissions disclosure dataset (Reported and Modeled) • Green-to-brown share dataset (Reported and Modeled) • Fossil fuel reserves (Reported and Modeled) • Trucost sector revenues dataset (Reported and Modeled) <p><i>For information on Trucost's methodology, please refer here.</i></p>	
	S&P Global (external data source)	<p>Media & Stakeholder Analysis (Reported and Modeled) – S&P Global uses RepRisk, a leading provider of business intelligence on environmental, social, and governance risks, for daily filtering, screening, and analysis of controversies related to companies within the indices. In cases where risks are presented, S&P Global releases a Media and Stakeholder Analysis (MSA) which includes a range of issues such as economic crime and corruption, fraud, illegal commercial practices, human rights issues, labor disputes, workplace safety, catastrophic accidents, and environmental disasters. The Index Committee will review constituents that have been flagged by S&P Global's MSA to evaluate the potential impact of controversial company activities on the composition of the indices. If a company is removed due to an MSA,</p>	

EXPLANATION OF HOW ENVIRONMENTAL, SOCIAL & GOVERNANCE (ESG) FACTORS ARE REFLECTED IN THE KEY ELEMENTS OF THE BENCHMARK METHODOLOGY ²²		
		<p>that company is not eligible for re-entry into the index for one full calendar year, beginning with the subsequent rebalancing.</p> <p><i>For more information about S&P Global's Media and Stakeholder Analysis, please refer to the MSA Methodology Guidebook, available via www.spglobal.com/esg/csa/csa-resources/csa-methodology.</i></p> <p>ESG score (Reported and Modeled) – The indices use S&P Global ESG Scores. S&P Global Sustainable1 calculates these scores and derives them from their 'Corporate Sustainability Assessment' (CSA). A company's CSA score is derived using either company-provided data, publicly available information, or a combination thereof.</p> <p><i>For more information about the S&P Global ESG scores please refer here and www.spdji.com/en/landing/investment-themes/esg-scores.</i></p> <p>S&P Global Business Involvement Screens (Reported and Modeled) – The dataset tracks the business activities, products and services that companies are involved in. The S&P Global Business Involvement Screens provide detailed assessments of common areas of investor concern pinpointing the precise level of involvement, from production to operations and distribution, to inform values-based investment strategies.</p> <p><i>For more information about S&P Global's Business Involvement Screens, please refer to https://www.spglobal.com/esg/solutions/portfolio-analytics-businessinvolvement-analytics.</i></p>
	Sustainalytics (external data source)	<p>This methodology uses the following datasets provided by Sustainalytics, a global leader in sustainability research and analytics:</p> <ul style="list-style-type: none"> • Global Standards Screening (Reported and Modeled) <p><i>For more information, please refer to www.sustainalytics.com.</i></p>
7.b	Verification and quality of data.	<p>The data quality process involves regular reviews of new data received, and includes comparison with previous data, outlier and error checks and escalation of suspect data to data vendors. S&P DJI also holds regular feedback sessions with data partners and vendors to share any quality concerns and to remedy any issues that are observed during data validations performed by the Global Data Management Team. In addition, all users of third-party data perform their own review of data used in the maintenance of indices. Many of the third-party data used by S&P DJI is reviewed against secondary and tertiary data sources for cross comparison and validation. Some more thematic or specific datasets may not have a comparable data source that can be used for comparison, but these datasets are still reviewed for internal consistency and self-comparison over time.</p>
7.c	Reference standards.	<p>Data is sourced from Trucost, which uses the following standards:</p> <ul style="list-style-type: none"> • <i>Scopes 1 and 2: the GHG Protocol Corporate Standard.</i> • <i>Scope 3 (upstream & downstream): The Corporate Value Chain Standard, which is a supplement to the GHG Protocol specific to Scope 3.</i>
Appendix latest update:		May 2024 – Changes to reflect methodology updates, effective June 2024
Appendix updates:		June 2023 – Added section 7c. June 2021 – Updated disclosures to account for June 2021 methodology changes (see <i>Appendix E</i>).
Appendix first publication:		December 2020

Disclaimer

Performance Disclosure/Back-Tested Data

Where applicable, S&P Dow Jones Indices and its index-related affiliates ("S&P DJI") defines various dates to assist our clients by providing transparency. The First Value Date is the first day for which there is a calculated value (either live or back-tested) for a given index. The Base Date is the date at which the index is set to a fixed value for calculation purposes. The Launch Date designates the date when the values of an index are first considered live: index values provided for any date or time period prior to the index's Launch Date are considered back-tested. S&P DJI defines the Launch Date as the date by which the values of an index are known to have been released to the public, for example via the company's public website or its data feed to external parties. For Dow Jones-branded indices introduced prior to May 31, 2013, the Launch Date (which prior to May 31, 2013, was termed "Date of introduction") is set at a date upon which no further changes were permitted to be made to the index methodology, but that may have been prior to the Index's public release date.

Please refer to the methodology for the Index for more details about the index, including the manner in which it is rebalanced, the timing of such rebalancing, criteria for additions and deletions, as well as all index calculations.

Information presented prior to an index's launch date is hypothetical back-tested performance, not actual performance, and is based on the index methodology in effect on the launch date. However, when creating back-tested history for periods of market anomalies or other periods that do not reflect the general current market environment, index methodology rules may be relaxed to capture a large enough universe of securities to simulate the target market the index is designed to measure or strategy the index is designed to capture. For example, market capitalization and liquidity thresholds may be reduced. In addition, forks have not been factored into the back-test data with respect to the S&P Cryptocurrency Indices. For the S&P Cryptocurrency Top 5 & 10 Equal Weight Indices, the custody element of the methodology was not considered; the back-test history is based on the index constituents that meet the custody element as of the Launch Date. Also, the treatment of corporate actions in back-tested performance may differ from treatment for live indices due to limitations in replicating index management decisions. Back-tested performance reflects application of an index methodology and selection of index constituents with the benefit of hindsight and knowledge of factors that may have positively affected its performance, cannot account for all financial risk that may affect results and may be considered to reflect survivor/look ahead bias. Actual returns may differ significantly from, and be lower than, back-tested returns. Past performance is not an indication or guarantee of future results.

Typically, when S&P DJI creates back-tested index data, S&P DJI uses actual historical constituent-level data (e.g., historical price, market capitalization, and corporate action data) in its calculations. As ESG investing is still in early stages of development, certain datapoints used to calculate certain ESG indices may not be available for the entire desired period of back-tested history. The same data availability issue could be true for other indices as well. In cases when actual data is not available for all relevant historical periods, S&P DJI may employ a process of using "Backward Data Assumption" (or pulling back) of ESG data for the calculation of back-tested historical performance. "Backward Data Assumption" is a process that applies the earliest actual live data point available for an index constituent company to all prior historical instances in the index performance. For example, Backward Data Assumption inherently assumes that companies currently not involved in a specific business activity (also known as "product involvement") were never involved historically and similarly also assumes that companies currently involved in a specific business activity were involved historically too. The Backward Data Assumption allows the hypothetical back-test to be extended over more historical years than would be feasible using only actual data. For more information on "Backward Data Assumption" please refer to the FAQ. The methodology and factsheets of any index that employs backward assumption in the back-tested history

will explicitly state so. The methodology will include an Appendix with a table setting forth the specific data points and relevant time period for which backward projected data was used. Index returns shown do not represent the results of actual trading of investable assets/securities. S&P DJI maintains the index and calculates the index levels and performance shown or discussed but does not manage any assets.

Index returns do not reflect payment of any sales charges or fees an investor may pay to purchase the securities underlying the Index or investment funds that are intended to track the performance of the Index. The imposition of these fees and charges would cause actual and back-tested performance of the securities/fund to be lower than the Index performance shown. As a simple example, if an index returned 10% on a US \$100,000 investment for a 12-month period (or US \$10,000) and an actual asset-based fee of 1.5% was imposed at the end of the period on the investment plus accrued interest (or US \$1,650), the net return would be 8.35% (or US \$8,350) for the year. Over a three-year period, an annual 1.5% fee taken at year end with an assumed 10% return per year would result in a cumulative gross return of 33.10%, a total fee of US \$5,375, and a cumulative net return of 27.2% (or US \$27,200).

This document does not constitute an offer of services in jurisdictions where S&P DJI does not have the necessary licenses. Except for certain custom index calculation services, all information provided by S&P DJI is impersonal and not tailored to the needs of any person, entity, or group of persons. S&P DJI receives compensation in connection with licensing its indices to third parties and providing custom calculation services. Past performance of an index is not an indication or guarantee of future results.

It is not possible to invest directly in an index. Exposure to an asset class represented by an index may be available through investable instruments based on that index. S&P DJI does not sponsor, endorse, sell, promote or manage any investment fund or other investment vehicle that is offered by third parties and that seeks to provide an investment return based on the performance of any index. S&P DJI makes no assurance that investment products based on the index will accurately track index performance or provide positive investment returns. S&P DJI is not an investment advisor, commodity trading advisor, fiduciary, "promoter" (as defined in the Investment Company Act of 1940, as amended) or "expert" as enumerated within 15 U.S.C. § 77k(a), and S&P DJI makes no representation regarding the advisability of investing in any such investment fund or other investment vehicle. A decision to invest in any such investment fund or other investment vehicle should not be made in reliance on any of the statements set forth in this document. S&P DJI is not a tax advisor. Inclusion of a security, commodity, crypto currency, or other asset within an index is not a recommendation by S&P DJI to buy, sell, or hold such security, commodity, crypto currency, or other asset, nor is it considered to be investment or trading advice.

Credit-related information and other analyses, including ratings, research and valuations are generally provided by licensors and/or affiliates of S&P Dow Jones Indices, including but not limited to S&P Global's other divisions such as S&P Global Market Intelligence. Any credit-related information and other related analyses and statements in the Content are statements of opinion as of the date they are expressed and not statements of fact. Any opinion, analyses and rating acknowledgement decisions are not recommendations to purchase, hold, or sell any securities or to make any investment decisions, and do not address the suitability of any security. S&P Dow Jones Indices does not assume any obligation to update the Content following publication in any form or format. The Content should not be relied on and is not a substitute for the skill, judgment and experience of the user, its management, employees, advisors and/or clients when making investment and other business decisions. S&P DJI does not act as a fiduciary or an investment advisor. While S&P DJI has obtained information from sources it believes to be reliable, S&P DJI does not perform an audit or undertake independent verification of any information it receives. S&P DJI reserves the right to vary or discontinue any index at any time for regulatory or other reasons. Various factors, including external factors beyond S&P DJI's control might necessitate material changes to indices.

To the extent that regulatory authorities allow a rating agency to acknowledge in one jurisdiction a rating issued in another jurisdiction for certain regulatory purposes, S&P Global Ratings reserves the right to assign, withdraw or suspend such acknowledgement at any time and in its sole discretion. S&P Dow Jones Indices, including S&P Global Ratings, disclaim any duty whatsoever arising out of the assignment, withdrawal, or suspension of an acknowledgement as well as any liability for any damage alleged to have been suffered on account thereof. Affiliates of S&P Dow Jones Indices LLC, including S&P Global Ratings, may receive compensation for its ratings and certain credit-related analyses, normally from issuers or underwriters of securities or from obligors. Such affiliates of S&P Dow Jones Indices LLC, including S&P Global Ratings, reserve the right to disseminate its opinions and analyses. Public ratings and analyses from S&P Global Ratings are made available on its Web sites, www.standardandpoors.com (free of charge), and www.ratingsdirect.com and www.globalcreditportal.com (subscription), and may be distributed through other means, including via S&P Global Ratings publications and third-party redistributors. Additional information about our ratings fees is available at www.standardandpoors.com/usratingsfees.

S&P Global keeps certain activities of its various divisions and business units separate from each other to preserve the independence and objectivity of their respective activities. As a result, certain divisions and business units of S&P Global may have information that is not available to other business units. S&P Global has established policies and procedures to maintain the confidentiality of certain nonpublic information received in connection with each analytical process.

In addition, S&P Dow Jones Indices provides a wide range of services to, or relating to, many organizations, including issuers of securities, investment advisers, broker-dealers, investment banks, other financial institutions, and financial intermediaries, and accordingly may receive fees or other economic benefits from those organizations, including organizations whose securities or services they may recommend, rate, include in model portfolios, evaluate, or otherwise address.

Some indices use the Global Industry Classification Standard (GICS®), which was developed by, and is the exclusive property and a trademark of, S&P Global and MSCI. Neither MSCI, S&P DJI nor any other party involved in making or compiling any GICS classifications makes any express or implied warranties or representations with respect to such standard or classification (or the results to be obtained by the use

thereof), and all such parties hereby expressly disclaim all warranties of originality, accuracy, completeness, merchantability, or fitness for a particular purpose with respect to any of such standard or classification. Without limiting any of the foregoing, in no event shall MSCI, S&P DJI, any of their affiliates or any third party involved in making or compiling any GICS classifications have any liability for any direct, indirect, special, punitive, consequential or any other damages (including lost profits) even if notified of the possibility of such damages.

S&P Dow Jones Indices products are governed by the terms and conditions of the agreements under which they may be provided. A license is required from S&P Dow Jones Indices to display, create derivative works of and/or distribute any product or service that uses, is based upon and/or refers to any S&P Dow Jones Indices and/or index data.

ESG Indices Disclaimer

S&P DJI provides indices that seek to select, exclude, and/or weight index constituents based on, but not limited to, certain environmental, social or governance (ESG) indicators, or a combination of those indicators, including the following: environmental indicators (including the efficient use of natural resources, the production of waste, greenhouse gas emissions, or impact on biodiversity); social indicators (such as, inequality and investment in human capital); governance indicators (such as sound management structures, employee relations, remuneration of staff, tax compliance, respect for human rights, anti-corruption and anti-bribery matters), specific sustainability or values-related company involvement indicators (for example, production/distribution of controversial weapons, tobacco products, or thermal coal), or controversies monitoring (including research of media outlets to identify companies involved in ESG-related incidents).

S&P DJI ESG indices use ESG metrics and scores in the selection and/or weighting of index constituents. ESG scores or ratings seek to measure or evaluate a company's, or an asset's, performance with respect to environmental, social and corporate governance issues.

The ESG scores, ratings, and other data used in S&P DJI ESG indices is supplied directly or indirectly by third parties (note these parties can be independent affiliates of S&P Global or unaffiliated entities) so an S&P DJI ESG index's ability to reflect ESG factors depends on these third parties' data accuracy and availability.

ESG scores, ratings, and other data may be reported (meaning that the data is provided as disclosed by companies, or an asset, or as made publicly available), modelled (meaning that the data is derived using a proprietary modelling process with only proxies used in the creation of the data), or reported and modelled (meaning that the data is either a mix of reported and modelled data or is derived from the vendor using reported data /information in a proprietary scoring or determination process).

ESG scores, ratings, and other data, whether from an external and/or internal source, is based on a qualitative and judgmental assessment, especially in the absence of well-defined market standards, and due to the existence of multiple approaches and methodologies to assess ESG factors and considerations. An element of subjectivity and discretion is therefore inherent in any ESG score, rating, or other data and different ESG scoring, rating, and/or data sources may use different ESG assessment or estimation methodologies. Different persons (including ESG data ratings, or scoring providers, index administrators or users) may arrive at different conclusions regarding the sustainability or impact of a particular company, asset, or index.

Where an index uses ESG scores, ratings or other data supplied directly or indirectly by third parties, S&P DJI does not accept responsibility for the accuracy of completeness of such ESG scores, ratings, or data. No single clear, definitive test or framework (legal, regulatory, or otherwise) exists to determine 'ESG', 'sustainable', 'good governance', 'no adverse environmental, social and/or other impacts', or other equivalently labelled objectives. In the absence of well-defined market standards and due to the existence of multitude approaches, the exercise of judgment is necessary. Accordingly, different persons may classify the same investment, product and/or strategy differently regarding 'ESG', 'sustainable', 'good governance', 'no adverse environmental, social and/or other impacts', or other equivalently labelled

objectives. Furthermore, the legal and/or market position on what constitutes an 'ESG', 'sustainable', 'good governance', 'no adverse environmental, social and/or other impacts', or other equivalently labelled objectives may change over time, especially as further regulatory or industry rules and guidance are issued and the ESG sustainable finance framework becomes more sophisticated.

Prospective users of an S&P DJI ESG Index are encouraged to read the relevant index methodology and related disclosures carefully to determine whether the index is suitable for their potential use case or investment objective.
