

# Understand what you could recover with LossStats™ Model.

Having an exposure to a distressed firm, and a potential default is a real possibility. Your concern drives not only from the possibility of that default, but what you can expect to recover, or lose, if default occurs. Understanding potential recovery and a potential default can be hard to accomplish, with many approaches relying on standardized assumptions. Now, thanks to LossStats™ Model, a statistical model built upon world class default and recovery data, there is an alternative.

## Methodological Excellence

- Our powerful statistical models help you estimate the loss and recovery levels of US, and European fixed income and lending facilities, taking into account industry and instrument specific characteristics.
- Calculate losses across multiple exposures and seniorities with a full control over debt positioning.
- Broad coverage helps you better understand the impact of specific collateral types on recovery statistics from all assets, including Plant, Property & Equipment, Real Estate, Oil & Gas Reserves, Intellectual Property, and many more.
- Seamlessly integrate fundamental default risk models to understand expected loss on any given exposure amount.
- Understand the nuances in loss and recovery outputs in different regulatory, and legal frameworks with broad country coverage across the US and Europe.

## Flexible Delivery

- Access LossStats Model via across the US and Europe IQ platform, or embed the analytics into your internal platforms with our API solutions.

## Essential analytics

- Utilize probability distribution charting to understand the likelihood of ultimate recovery levels you define.
- Analyze minimum and maximum expected recovery and losses on any exposure size calculated at pre-defined confidence levels.
- Apply a rigorous analytical approach to loss and recovery analysis with our model methodology that incorporates both exposure-specific characteristics such as collateral type, debt structure/class or seniority, and certain macro-economic factors at the country, and industry level.

## Powerful data

- LossStats Model has been calibrated upon a proprietary database covering more than 4,000 US bond and loan recoveries spanning over 30 years and 1,000 European bond and loan recoveries spanning over 13 years.
- Evaluate the financial picture of public and private companies globally through one of the largest datasets of company financial information available, including standardized, transparent and analytically-enhanced data.

## Relevant insights to help you make critical decisions.
