Introduction

Index Objective

The Dow Jones Sustainability Indices (DJSI) are float-adjusted market capitalization weighted indices that measure the performance of companies selected with economic, environmental, and social criteria using a best-in-class approach.

Highlights

S&P Dow Jones Indices partners with RobecoSAM, a specialist in sustainability investing, to provide investors with objective benchmarks for managing their sustainability investment portfolios. The DJSI allow the creation of portfolios of companies that fulfill certain sustainability criteria better than the majority of their peers within a given industry.

To address specific investor requirements, the DJSI index family includes sub-indices that exclude companies engaged in certain activities widely considered as unsustainable (see *Ethical Exclusion Sub-Indices* for details). Finally, the DJSI Blue Chip Indices comprise a sub-family within the DJSI, but maintain their own selection and weighting criteria (see *Constituent Selection* and *Constituent Weighting* for details).

Index Family

The DJSI benchmarks are comprised of three geographical breakdowns: DJSI World (including DJSI Emerging Markets), DJSI Regions, and DJSI Countries. Indices within these geographical divisions use different starting universes and different percentiles to mark the “cut off” point in selecting the most sustainable companies (see *Constituent Selection* for details). This means that the emerging markets, country and regional indices are not simply sub-indices of the DJSI World, and there is no “roll up” of indices from country, to region, to world.

The Dow Jones Sustainability Indices benchmark family consists of the following indices:

Geographical Breakdown	Index
DJSI World	Dow Jones Sustainability World Dow Jones Sustainability World Enlarged Dow Jones Sustainability Emerging Markets
DJSI Regions	Dow Jones Sustainability Asia/Pacific Dow Jones Sustainability Europe Dow Jones Sustainability North America
DJSI Countries	Dow Jones Sustainability Australia Dow Jones Sustainability Canada Select 25 Dow Jones Sustainability Korea Dow Jones Sustainability Korea Capped 25% Dow Jones Sustainability Chile ¹

All other indices are subsets of the above benchmarks.

Please refer to *Appendix II* for a full outline of country allocations by benchmark.

¹ For detailed information on the Dow Jones Sustainability Chile Index, please refer to the Dow Jones Sustainability Chile Index Methodology document available at www.spdji.com.

The Dow Jones Sustainability Blue-Chip Index family consists of the following indices:

- DJSI World 80
- DJSI World ex-U.S. 80
- DJSI Asia/Pacific 40
- DJSI Europe 40
- DJSI Eurozone 40
- DJSI Korea 20
- DJSI Japan 40
- DJSI North America 40
- DJSI U.S. 40

Supporting Documents

This methodology is meant to be read in conjunction with supporting documents providing greater detail with respect to the policies, procedures and calculations described herein. References throughout the methodology direct the reader to the relevant supporting document for further information on a specific topic. The list of the main supplemental documents for this methodology and the hyperlinks to those documents is as follows:

Supporting Document	URL
S&P Dow Jones Indices' Equity Indices Policies & Practices Methodology	Equity Indices Policies & Practices
S&P Dow Jones Indices' Index Mathematics Methodology	Index Mathematics Methodology
S&P Dow Jones Indices' Float Adjustment Methodology	Float Adjustment Methodology
S&P Dow Jones Indices' Global Industry Classification Standard (GICS) Methodology	GICS Methodology

This methodology was created by S&P Dow Jones Indices to achieve the aforementioned objective of measuring the underlying interest of each index governed by this methodology document. Any changes to or deviations from this methodology are made in the sole judgment and discretion of S&P Dow Jones Indices so that the index continues to achieve its objective.

Eligibility Criteria

Sustainability Scoring

The key factor in selecting constituents for any DJSI index is a company's Total Sustainability Score (TSS), calculated under RobecoSAM's annual Corporate Sustainability Assessment (CSA). The annual CSA process begins in March each year, with new scores released in September.

The first step in the CSA process is the definition of the companies to be invited to participate in the CSA (the "Invited Universe"). The Invited Universe varies among the different DJSI sub-families (DJSI World, DJSI Emerging Markets, etc.) and is designed to ensure that each sub-family index tracks the larger market, as represented by a relevant broad market benchmark.

The result of the annual CSA process is the creation of an "Assessed Universe" for each member of the DJSI family. This is the universe of companies for which Total Sustainability Scores are calculated based on the CSA questionnaire, either through the participation of the companies, or through the use of publically available information. See *The Assessed Universe* for details of this process.

Please see *Appendix I* for a more detailed description of the sustainability scoring process.

Change of Industry and Domicile

Companies are assessed based on their CSA industry classification at the end of March. If a company is reclassified to a new industry during the assessment process, the March classification is used during the September annual rebalancing. This is to ensure that the industry methodology applied to it remains valid and that the company is accurately compared against its peers. The company will be eligible under its new industry classification starting with the subsequent assessment cycle.

In addition, companies are considered for one or more regional indices based on their domicile as of the end of March. Companies that change their domicile during the assessment process will become eligible for the new domicile's respective indices. In the event of a domicile change during the assessment process, the initial invited universe sizes will not be updated upon constituent selection as to preserve the targeted constituent counts for each impacted index.

Multiple Classes of Stock

Some companies have more than one class of common stock outstanding. In the Dow Jones Sustainability Indices, each company is represented only once. Only the stock with the largest float-adjusted market capitalization is considered. In exceptional cases, the most liquid stock, based on 12 month average daily trading volume, may be considered instead. For companies with multiple dual listings (e.g. Unilever PLC and Unilever N.V.) both stocks are considered and have identical scores.

Index Construction

The DJSI use a transparent, rules-based constituent selection process based on the companies' TSS and the CSA industry classifications resulting from the annual RobecoSAM CSA.

While the selection of constituents for the DJSI reflects the use of the TSS, the weighting of constituents within each of the DJSI benchmark sub-families (World, Regions, and Countries) is in accordance with their market capitalization, based on their float-adjusted shares outstanding in S&P Global BMI, and subject to a maximum weight of 10%.² The DJSI Korea Capped 25% is an exception as it uses a 25% stock cap at rebalancing, instead of the standard 10%. The DJSI Blue-Chip indices are weighted by sustainability score. The Dow Jones Sustainability Canada Select 25 Index is not capped. The DJSI also follow the methodology and maintenance procedures for the S&P Global BMI with respect to quarterly rebalancing and the treatment of corporate actions.

The composition of each of the DJSI sub-families is reviewed each year in September based on the TSS resulting from that year's CSA. To reduce turnover, a standard buffer rule is applied to the constituent selection process (see *Constituent Selection* for details).

Companies may also be deleted from the DJSI between annual reviews, if, through the Media & Stakeholder Analysis (MSA) component of the CSA, or by other means, the DJSI Index Committee determines that a company is no longer behaving in a manner that is consistent with its current TSS.

For more information on the Media & Stakeholder Analysis (MSA), please refer to Appendix I.

The Invited Universe

The Invited Universe consists of all companies invited to participate in the annual RobecoSAM CSA. Each DJSI Index is based on an Invited Universe that includes the largest companies by float-adjusted market capitalization within the S&P Global BMI, plus any existing index constituents whose free-float market capitalization as of the prior year end is above a pre-defined threshold as defined in the table below. There are nine unique DJSI invited universes, including DJSI Chile.³

Index	Companies Invited	Existing Constituent Threshold
DJSI World	2500 largest companies in the S&P Global BMI	Above US\$ 500 million
DJSI World Enlarged		
DJSI Emerging Markets	800 largest emerging markets companies in the S&P Global BMI	
DJSI Asia/Pacific	600 largest developed Asia/Pacific markets companies in the S&P Global BMI	
DJSI Europe	600 largest developed European markets companies in the S&P Global BMI	
DJSI North America	600 largest US & Canadian companies in the S&P Global BMI	
DJSI Australia	Entire S&P ASX 200	Above A\$ 100 million
DJSI Canada Select 25	Canadian companies invited to the DJSI World and DJSI North America	--
DJSI Korea	200 largest South Korean companies in the S&P Global BMI	Above US\$ 100 million
DJSI Korea Capped 25%		

² For detailed information on the S&P Global BMI (Broad Market Index), please refer to the S&P Global BMI Methodology available at www.spdji.com.

³ For detailed information on the Dow Jones Sustainability Chile Index, please refer to the Dow Jones Sustainability Chile Index Methodology document available at www.spdji.com.

The Assessed Universe

The Assessed Universe consists of those companies from the Invited Universe with a TSS. It is determined in the following steps:

1. List all companies of the Invited Universe who chose to participate in the CSA process by completing the CSA Questionnaire.
2. List all other existing constituents of the relevant index who have a float-adjusted market capitalization greater than the relevant threshold.
3. Group the companies identified in Steps 1 and 2 by region⁴ and industry, and sum their total float-adjusted market caps.
4. Express each of the regional market cap totals from Step 3 as a percentage of the actual market caps of each region, and each of the industry market cap totals from Step 3 as a percentage of the actual market caps of each industry in the S&P Global BMI as of the prior year end.
5. If the percentage from Step 4 is less than 50% for a region and industry, add companies from the Invited Universe for that industry and that region that did not respond to the CSA Questionnaire, starting with the largest by market cap, until the 50% target is achieved or exceeded. These companies must have a score assigned by RobecoSAM based on publicly available information to be eligible.
6. Once the targeted 50% market capitalization coverage target is reached for each region and industry, no further companies are added to the Assessed Universe.

DJSI Blue-Chips. The DJSI Blue-Chip Indices do not have their own Assessed Universe. In constructing the indices, the DJSI Blue-Chips use the Eligible Universe as discussed in *The Eligible Universe*.

The Eligible Universe

The creation of the Eligible Universe from the Assessed Universe for the DJSI benchmark indices is as follows:

1. Within the Assessed Universe, disqualify companies with a TSS that is less than 40% of the TSS of the highest scoring company in the Assessed Universe of the respective index.
2. Ensure that there are sufficient companies within each industry with a TSS to select at least one company in each industry according to the relevant selection rules for each index. In the event that there are insufficient companies available from a specific industry, industries may be combined within a GICS[®] Industry Group. Industries are combined considering comparability of scores and sustainability issues addressed; the resulting industries are referred to as Eligible Industries. As the number of companies in each industry with a TSS can vary from year to year, the industry combinations are subject to review on an annual basis.
3. The remaining companies form the Eligible Universe.

DJSI Canada Select 25. In addition to the three steps explained above, all companies are excluded from the Eligible Universe if they do not have a float-adjusted market capitalization of at least C\$ 3 billion and a 90-day average trading volume of at least C\$ 10 million.

The remaining companies form the Eligible Universe for the DJSI Canada Select 25. If the Eligible Universe consists of fewer than 25 companies, the index will have less than 25 constituents.

DJSI Blue-Chips. The Eligible Universe for the annual review of the DJSI Blue-Chip Indices is the constituents of the reviewed respective main DJSI Index.

⁴ Regions for the Assessed Universe of the DJSI World include North America, Europe, and Asia Pacific.

Constituent Selection

The constituents of the DJSI indices (with the exception of constituents of the DJSI Canada Select 25 and DJSI Blue-Chips) are selected from the Eligible Universe to meet the Target % of Eligible Companies in each Eligible Industry, subject to buffer rules to reduce turnover:

1. Within each Eligible Industry, rank all Invited Companies in descending order by their TSS.
2. Within each Eligible Industry, select those companies that are both in the Eligible Universe and in the top Target % of the ranked Invited Universe.
3. From the remaining companies, select those in the Eligible Universe that are within 0.3 score points of the last selected company in step (2), even if this means that the Target % is exceeded.
4. Select from the remaining Eligible Companies by descending order of TSS that meet the following two criteria:
 - a. Existing constituents of the respective DJSI index.
 - b. In the top Buffer % of all Invited Companies in the given Eligible Industry.

The Target and Buffer percentages vary by DJSI benchmark index. Please refer to the table below for each specific benchmark:

Index	Target %*	Buffer %*
DJSI World	10	15
DJSI World Enlarged	20	30
DJSI Emerging Markets	10	15
Regions:	20	30
<ul style="list-style-type: none"> • DJSI Europe • DJSI North America • DJSI Asia/Pacific 		
DJSI Australia	30	45
DJSI Korea	30	45

* Target % and Buffer % based on Total Sustainability Score.

DJSI Canada Select 25. Constituents for the DJSI Canada Select 25 are selected from the Eligible Universe as follows, with the overall goal of selecting the 25 largest Eligible Companies by GICS® Industry Groups:

1. Within each GICS® Industry Group of the Eligible Universe, rank the Eligible Companies in descending order by their float-adjusted market capitalization.
2. Select the top ranked company in each GICS® Industry Group.
3. Select additional companies among the remaining companies by descending order of float-adjusted market capitalization, so that no more than five companies are selected from each GICS® Industry Group.
4. If the target number of 25 companies has not been reached, select additional companies by descending order of float-adjusted market capitalization, irrespective of GICS® Industry Group, until the total target number of constituents has been reached or all eligible companies have been selected.

DJSI Blue-Chips. Constituent selection is as follows:

1. Rank each company in the respective Eligible Universe according to its float-adjusted market capitalization as of the last business day of July.
2. Select the largest companies by float-adjusted market capitalization according to each index's Top Rank criteria.

3. Select all current constituents ranked within the Buffer Rank until the Total number of constituents has been reached.
4. If the Total number of constituents has not been reached, select additional constituents in descending order until the Total number of constituents is reached.
5. For Steps 2 and 3, the selections must comply with each index's maximum number of companies allowed per GICS® Industry Group, as listed in the following table:

Index	Benchmark Universe	Top Rank	Buffer Rank	Total	No. of Cos per GICS Industry Group
DJSI World 80	DJSI World	60	61-100	80	10
DJSI World ex-U.S. 80	DJSI World excluding U.S.	60	61-100	80	10
DJSI North America 40	DJSI North America	30	31-50	40	5
DJSI US 40	U.S. constituents of the DJSI North America	30	31-50	40	5
DJSI Europe 40	DJSI Europe	30	31-50	40	5
DJSI Eurozone 40	Eurozone constituents of the DJSI Europe	30	31-50	40	5
DJSI Asia/Pacific 40	DJSI Asia/Pacific	30	31-50	40	5
DJSI Japan 40	Japanese constituents of the DJSI Asia/Pacific	30	31-50	40	5
DJSI Korea 20	DJSI Korea	15	16-25	20	3

Ethical Exclusion Sub-Indices

Ethical Exclusion sub-indices are constructed according to the following steps:

1. The entire selected universe (i.e. all companies selected for the DJSI) is screened by Sustainalytics, a provider of ethical investment research services, for exposure to the following: alcohol, tobacco, gambling, armaments, cluster bombs, firearms, landmines, adult entertainment, nuclear weapons, nuclear power generation and nuclear power sales. Refer to *Appendix IV* for criteria definitions.
2. RobecoSAM determines exposure to uranium mining for the selected universe.
3. Information obtained in Steps 1 and 2 is combined to determine the relevant exclusion tag(s) for each company:
 - a. If more than 5% of a company's sales are derived from armaments, the company receives an Armaments exclusion tag in order to prevent the exclusion of companies classified under the Electronic Equipment & Instruments or Heavy Electrical Equipment Industries. All other exclusions are based on 0% exposure.
 - b. Exposure to armaments, cluster bombs, firearms, land mines, or nuclear weapons is also indicated with an armaments tag.

Constituent Weighting

The Dow Jones Sustainability Benchmark Indices are weighted by float-adjusted market capitalization. On a quarterly basis, the maximum weight of any index constituent is capped at 10% of the index. The DJSI Korea Capped 25% limits the weights of any stock to 25% at rebalancing. The Dow Jones Sustainability Canada Select 25 Index is not capped.

The Dow Jones Sustainability Blue-Chip Indices are weighted by Relative Sustainability Score. A Relative Sustainability Score for each constituent is created based on the best score that a company in the same industry has achieved. For example, if the constituent is assigned to the chemicals industry and has a score of 60 and the best company in the chemicals industry has achieved a score of 80, then the Relative Sustainability Score is $60/80 = 75\%$. The weighting of each constituent at the annual review date reflects the Relative Sustainability Score of the company divided by the total sum of the Relative Sustainability Scores of all constituents. As the weighting for the DJSI Blue Chip Indices are based on a stock's

Relative Sustainability Score, a weight factor is introduced that reflects the initial stock's weighting at the annual review.

Index Calculations

The index is calculated by means of the divisor methodology used in all S&P Dow Jones Indices' equity indices.

For more information on the index calculation methodology, please refer to the Capped Market Capitalization Indices section of S&P Dow Jones Indices' Index Mathematics Methodology.

For more information on the index calculation methodology for the DJSI Blue-Chip Indices, please refer to the Non-Market Capitalization Weighted Indices section of S&P Dow Jones Indices' Index Mathematics Methodology.

Index Maintenance

Rebalancing

Each index is rebalanced once a year in September. Constituent changes as a result of the annual rebalancing are announced after the close of trading on the second Friday in September and take effect at the open of trading on the Monday following the third Friday in September.

In addition to the scheduled annual rebalancing, the indices are reviewed on an ongoing basis to account for corporate actions. A change to the index composition and a related weight adjustment is necessary whenever there is an extraordinary event (e.g. delisting, bankruptcy, merger, takeover, etc.) involving an index constituent. In these cases, each event is accounted for as soon as it is effective. Such changes in an index's constituents are announced, whenever possible, two days prior to their implementation.

Quarterly Updates

The constituent shares outstanding and capping factors are reviewed and updated quarterly.

Changes to a constituent's shares and cap factors as a result of the quarterly updates are implemented after the closing values have been established on the third Friday in March, June, September and December, and are effective at the open of trading on the Monday following the third Friday.

Additions and Deletions

Additions. Generally no companies are added to an index between annual rebalancings unless as a result of a spin off or demerger from an existing constituent.

Deletions. Between annual rebalancings, a company can be deleted from the Dow Jones Sustainability Indices due to corporate events such as mergers, acquisitions, takeovers, and delistings. In addition, at the discretion of the Index Committee, a deletion may occur if an MSA case is raised by RobecoSAM.

Corporate Actions

Corporate actions (such as stock splits, stock dividends, spin-offs, and rights offerings) are applied after the close of trading on the day prior to the ex-date. Share changes resulting from exchange offers are applied on the ex-date.

For more information on Corporate Actions, please refer to S&P Dow Jones Indices' Equity Indices Policies & Practices document.

Spin-offs and Demergers. A newly spun-off or demerged company qualifies for index inclusion if it fulfills all of the respective DJSI index constituent selection criteria and the float-adjusted market capitalization of the spun-off company is greater than US\$ 500 million. If a spun-off company is deemed ineligible for inclusion, the stock is added to the indices on the ex-date of the action and removed after at least one day of regular way trading. All spin-offs are ineligible for the DJSI Blue Chip indices.

A company added following a spin-off or demerger retains the total sustainability score of its parent company for selection purposes at the subsequent annual rebalancing.

Furthermore, the spun-off company takes on the exclusion flag of the parent company until the subsequent quarterly update, effective after the close of trading on the third Friday of March, June,

September, and December, at which point the exclusion flags of both the parent and the child companies is reviewed.

The cutoff for spin-off activity is the last business day of the month prior to the rebalancing month (e.g. February 28 for the March rebalance). Any spin-offs that become effective after that date are reviewed at the following rebalance.

Mergers and Acquisitions. If two DJSI constituents merge or if a DJSI constituent takes over another DJSI constituent, the merged company remains in the index. If a DJSI constituent takes over a non-DJSI constituent, the DJSI constituent remains in the index. Exclusion flag updates as a result of merger and acquisition activity are updated with the subsequent quarterly rebalance.

The cutoff for assessing the continuing eligibility for the acquirer or merged entity is the last business day of the month prior to the rebalancing month (e.g. February 28 for the March rebalance); any corporate events effective after that date are reviewed at the following rebalance.

Investable Weight Factor (IWF)

All issues in the Dow Jones Sustainability Indices are assigned a float factor, called an Investable Weight Factor (IWF). The IWF ranges between 0 and 1 and is an adjustment factor that accounts for the publicly available shares of a company. The company's adjusted market capitalization determines an equity issue's relative weight in the index.

Please refer to S&P Dow Jones Indices' Float Adjustment Methodology for details.

Other Adjustments

In cases where there is no achievable market price for a stock being deleted, it may be removed at a zero or minimal price at the Index Committee's discretion, in recognition of the constraints faced by investors in trading bankrupt or suspended stocks.

Currency of Calculation and Additional Index Return Series

The DJSI indices are calculated in U.S. dollars and euros, except as noted in the table below.

Index	Currencies
Dow Jones Sustainability World Index	USD, EUR, CHF, GBP
Dow Jones Sustainability World Developed Index	USD, EUR, CHF
Dow Jones Sustainability Australia Index	USD, AUD
Dow Jones Sustainability Canada Select 25 Index	USD, CAD
Dow Jones Sustainability Chile Index	USD, CLP
Dow Jones Sustainability Korea Index	USD, KRW
Dow Jones Sustainability Korea 20 Index	USD, KRW
Dow Jones Sustainability Korea Capped 25% Index	USD, KRW
Dow Jones Sustainability Japan 40 Index	USD, JPY
Dow Jones Sustainability U.S. Index	USD

Real-time spot Forex rates, as supplied by Reuters, are used for ongoing index calculation of real-time indices.

WM/Reuters foreign exchange rates are taken daily at 4:00 PM London Time and used in the end-of-day calculation of the indices. These mid-market fixings are calculated by The WM Company based on Reuters data and appear on Reuters pages WMRA.

In addition to the indices detailed in this methodology, additional return series versions of the indices may be available, including, but not limited to: currency, currency hedged, decrement, fair value, inverse, leveraged, and risk control versions. For a list of available indices, please refer to [S&P DJI's All Indices by Methodology Report](#).

For information on the calculation of different types of indices, please refer to S&P Dow Jones Indices' Index Mathematics Methodology.

Base Dates and History Availability

Index history availability, base dates and base values are shown in the table below.

Index	Launch Date	First Value Date	Base Date	Base Value
Dow Jones Sustainability World Index	09/08/1999	12/31/1993	12/31/1993	440.11
Dow Jones Sustainability World Index ex Alcohol, Tobacco, Gambling, Armaments & Firearms	09/08/1999	12/31/1993	12/31/1993	434.70
Dow Jones Sustainability World Index ex Alcohol, Tobacco, Gambling, Armaments & Firearms and Adult Entertainment	07/01/2008	06/30/2008	06/30/2008	1000

Index Data

Calculation Return Types

S&P Dow Jones Indices calculates multiple return types which vary based on the treatment of regular cash dividends. The classification of regular cash dividends is determined by S&P Dow Jones Indices.

- Price Return (PR) versions are calculated without adjustments for regular cash dividends.
- Gross Total Return (TR) versions reinvest regular cash dividends at the close on the ex-date without consideration for withholding taxes.
- Net Total Return (NTR) versions, if available, reinvest regular cash dividends at the close on the ex-date after the deduction of applicable withholding taxes.

In the event there are no regular cash dividends on the ex-date, the daily performance of all three indices will be identical.

For a complete list of indices available, please refer to the daily index levels file (“.SDL”).

For more information on the classification of regular versus special cash dividends as well as the tax rates used in the calculation of net return, please refer to S&P Dow Jones Indices’ Equity Indices Policies & Practices Methodology.

For more information on the calculation of return types, please refer to S&P Dow Jones Indices’ Index Mathematics Methodology.

Index Governance

Index Committee

The indices are governed by the DJSI Index Committee consisting of an equal number of S&P Dow Jones Indices and RobecoSAM representatives. The Committee is responsible for overseeing the management of all changes affecting the DJSI Indices that are related to the Total Sustainability Scores, in accordance with the index rules, including any additions or deletions of companies, or changes to the weights of companies, arising from (i) a change in the Total Sustainability Score of an existing index constituent; or (ii) either a change in, or a newly created, Total Sustainability Score of a company that, at the time of the decision, is not a constituent of any DJSI index.

The DJSI Index Committee also is responsible for monitoring overall policy guidelines and index methodologies, as well as additions to and deletions from these indices and treatment of corporate actions. It is the sole responsibility of the Index Committee to decide on all matters relating to methodology, maintenance, constituent selection in accordance with the index rules and index procedures. The Index Committee makes decisions based on all publicly available information and discussions are kept confidential to avoid any unnecessary impact on market trading.

S&P Dow Jones Indices' Index Committees reserve the right to make exceptions when applying the methodology if the need arises. In any scenario where the treatment differs from the general rules stated in this document or supplemental documents, clients will receive sufficient notice, whenever possible.

In addition to the daily governance of indices and maintenance of index methodologies, at least once within any 12-month period, the Index Committee reviews the methodology to ensure the indices continue to achieve the stated objectives, and that the data and methodology remain effective. In certain instances, S&P Dow Jones Indices may publish a consultation inviting comments from external parties.

For information on Quality Assurance and Internal Reviews of Methodology, please refer to S&P Dow Jones Indices' Equity Indices Policies & Practices Methodology.

Index Policy

Announcements

All index constituents are evaluated daily for data needed to calculate index levels and returns. All events affecting the daily index calculation are typically announced in advance via the Index Corporate Events report (.SDE), delivered daily to all clients. Any unusual treatment of a corporate action or short notice of an event may be communicated via email to clients.

Press releases are posted on our Web site, www.spdji.com, and are released to major news services.

Pro-forma Files

In addition to the corporate events file (.SDE), S&P Dow Jones Indices provides constituent pro-forma files each time the indices rebalance. The pro-forma file is typically provided daily in advance of the rebalancing date and contains all constituents and their corresponding weights and index shares effective for the upcoming rebalancing. Since index shares are assigned based on prices seven business days prior to the rebalancing, the actual weight of each stock at the rebalancing differs from these weights due to market movements.

Please visit www.spdji.com for a complete schedule of rebalancing timelines and pro-forma delivery times.

Holiday Schedule

The indices are calculated daily, throughout the calendar year. The only days an index is not calculated are on days when all exchanges where an index's constituents are listed are officially closed or if WM Reuters' exchange rates services are not published.

A complete holiday schedule for the year is available at www.spdji.com.

Rebalancing

The Index Committee may change the date of a given rebalancing for reasons including market holidays occurring on or around the scheduled rebalancing date. Any such change will be announced with proper advance notice where possible.

Unexpected Exchange Closures

For information on Unexpected Exchange Closures, please refer to S&P Dow Jones Indices' Equity Indices Policies & Practices Methodology.

Recalculation Policy

For information on the recalculation policy, please refer to S&P Dow Jones Indices' Equity Indices Policies & Practices Methodology.

Real-Time Calculation

Real-time, intra-day, index calculations are executed for certain indices whenever any of their primary exchanges are open. Real-time indices are not restated.

For information on Calculations and Pricing Disruptions, Expert Judgment and Data Hierarchy, please refer to S&P Dow Jones Indices' Equity Indices Policies & Practices Methodology.

Contact Information

For questions regarding an index, please contact: index_services@spglobal.com.

Index Dissemination

Index levels are available through S&P Dow Jones Indices' Web site at www.spdji.com, major quote vendors (see codes below), numerous investment-oriented Web sites, and various print and electronic media.

Tickers

The table below lists headline indices covered by this document. All versions of the below indices that may exist are also covered by this document. Please refer to [S&P DJI's All Indices by Methodology Report](#) for a complete list of indices covered by this document.

Appendix I

Sustainability Scoring

The key factor in selecting constituents for any DJSI index is a company's Total Sustainability Score (TSS), calculated under RobecoSAM's annual Corporate Sustainability Assessment (CSA). The first CSA was undertaken in 1999, with the launch of the original family of DJSI indices.

The annual CSA process begins in March each year, with new scores released in September.

The first step in the CSA process is the definition of the companies to be invited to participate in the CSA (the "Invited Universe"). The Invited Universe varies among the different DJSI sub-families (DJSI World, DJSI Emerging Markets, etc.) and is designed to ensure that each sub-family index tracks the larger market, as represented by a relevant broad market benchmark.

Companies in each Invited Universe are asked to respond to an extensive industry-specific CSA questionnaire. The CSA invitations are sent out each March, and a current list is available at www.robecosam.com.⁵

Not all companies in a given Invited Universe choose to respond to the CSA questionnaire. Where such non-participating companies meet certain size criteria, RobecoSAM completes the CSA questionnaire, to the extent possible, based on publically available information to ensure that certain minimum representativeness requirements are met. The minimum requirements also vary among the DJSI index sub-families, as described in *The Assessed Universe*. RobecoSAM assigns a zero score to any question in the CSA questionnaire where no information is available, as it is unknown whether the company has the applicable measure in place.

The result of the annual CSA process is the creation of an "Assessed Universe" for each member of the DJSI family. This is the universe of companies for which Total Sustainability Scores are calculated based on the CSA questionnaire, either through the participation of the companies, or through the use of publically available information. See *The Assessed Universe* for details of this process.

An integral component of the Corporate Sustainability Assessment is the ongoing monitoring of media and stakeholder commentaries, and other publicly available information from consumer organizations, NGOs, governments and international organizations, to identify companies' involvement and response to environmental, economic and social crisis situations that may have a damaging effect on their reputation and core business. Throughout the year, RobecoSAM monitors news coverage of companies in the universe on a daily basis using media stories compiled and pre-screened by RepRisk, a leading provider of business intelligence on environmental, social and governance (ESG) risks. On a daily basis, RepRisk screens, captures, filters and analyzes ESG risks related to companies in 14 languages. This information helps identify a company's involvement with ESG issues that may have a damaging effect on its reputation and core business, and aids in assessing whether a company's policies, processes, management systems and commitments translate into positive performance. News stories covered by the Media and Stakeholder Analysis (MSA) include a range of issues such as economic crime and corruption, fraud, illegal commercial practices, human rights issues, labor disputes, workplace safety, catastrophic accidents, and environmental disasters. The Assessed Universe for each DJSI index serves as the starting point for the selection of companies included in the index.

⁵ For a more detailed review of the CSA methodology and the CSA Questionnaires, refer to *RobecoSAM's Corporate Sustainability Assessment Methodology* document available at www.robecosam.com/images/Measuring_Intangibles_CSA_methodology_e.pdf

In the course of the CSA process, companies are assigned to one of the industries defined by RobecoSAM (the “RobecoSAM Industries”). RobecoSAM uses the Global Industry Classification System (GICS®) as its starting point for determining industry classification.⁶ At the industry group and sector levels, the RobecoSAM Industries match the standard GICS classifications, but some non-standard aggregations are done at the industry level. Please see *Appendix III* for a list of RobecoSAM Industries.

Not all RobecoSAM Industries are necessarily represented in every DJSI index, due to the minimum eligibility thresholds as described in *The Eligible Universe*.

⁶ For more information about GICS®, please refer to the Global Industry Classification Standard (GICS®) Methodology available at www.spdji.com.

Appendix IV

Exclusion Criteria Definitions

Ethical Exclusion criteria definitions are as follows:

Adult Entertainment. Companies that publish or wholesale pornographic magazines or newspapers and/or produce adult entertainment services, including those who produce adult entertainment services via mobile telecommunications networks.

Alcohol. Companies that produce alcoholic beverages.

Armaments. Companies that sell military goods, services or intellectual property (including technology) internationally; or the supply of goods, services or intellectual property to a state which is not the state of the parent company, or the exhibition or advertisement of these goods or services in internationally available military related publications, or at international defense exhibitions, evidence of military related strategic level exporting activity to oppressive regimes. Companies that sell strategic parts for weapons systems like combat and communications equipment, training equipment, and arming devices for missile warheads. Companies that sell strategic services like computing, communications services and flight simulation training. Companies that sell strategic products or services that are essential to modern weapon systems or military operations like combat and communications equipment, training equipment, armor and machine tools. Companies that sell strategic services like computing, communications services and civil engineering or that are essential to running of a military or nuclear base. An example of a strategic service for military or nuclear bases would include major civil engineering projects at bases such as the Devonport Royal Navy Dockyards or Aldermaston Atomic Weapons Establishment.

Cluster Bombs. Companies that produce cluster munitions systems and or cluster bombs key parts.

Firearms. Companies that produce ammunition, air guns, civilian small arms including revolvers and pistols (hand guns), sporting and hunting rifles and shotguns and firearms used by law enforcement agencies.

Gambling. Companies that operate betting shops, horse and greyhound racing tracks, licensed bingo halls, casinos, gaming clubs, or provide on-line betting services.

Landmines. Companies that have had allegations or indications of involvement with anti-personnel landmines (10 years' time limit) and which have not addressed the allegations.

Nuclear Power. Companies that operate nuclear power plants sell nuclear generated energy and/or generate revenues from uranium mining.

Nuclear Weapons. Companies that produce nuclear weapons systems and/or platforms for nuclear weapons (ships, planes, or other vehicles from which weapons can be deployed), produce strategic parts, and/or offer strategic services.

Tobacco. Companies that produce tobacco or tobacco products.

Exclusion Tag	Description

Appendix V

Methodology Changes

Methodology changes since January 1, 2015 are as follows:

Change	Effective Date (After Close)	Previous	Methodology Updated
Change to Merger/ Acquisition Treatment	06/16/2017	<p>If the target company is a DJSI constituent, the following rules apply:</p> <p>If the DJSI constituent represents less than 33% of the total float-adjusted market capitalization of the new entity, the DJSI constituent is removed from the indices.</p> <p>If the DJSI constituent represents between 33% and 66% of the total float-adjusted market capitalization of the new entity, the Total Sustainability Scores of the two companies are merged, based on the proportional float-adjusted market cap weightings of both entities compared to the new float-adjusted market capitalization of the new consolidated entity.</p> <p>In all other cases, the merged company is included in the index if the float-adjusted market capitalization weighted average Total Sustainability Score of the merged entities is equal to or above the index's Buffer % (see Constituent Selection) and no MSA case warranting exclusion is flagged.</p>	If a DJSI constituent takes over a non-DJSI constituent, the DJSI constituent remains in the index.
Change of Ethical Exclusion Provider	09/16/2016	Ethical exclusion research provided by EIRIS.	Ethical exclusion research provided by Sustainalytics.
Changes to Exclusion Criteria	07/01/2015	Companies dealing in nuclear weapons were excluded under the Armaments exclusion flag, which uses a 5% threshold for exclusion.	Nuclear Weapons is now separate from Nuclear (now Nuclear Power) and uses a 0% threshold for exclusion.
Changes to Corporate Action Treatment	10/01/2015	Constituent and exclusion flag changes were applied to the indices shortly following the effective date of the corporate action.	Constituent and exclusion flag changes will be applied on a quarterly basis after the close of trading on the third Friday of March, June, September, and December.

These trademarks together with others have been licensed to S&P Dow Jones Indices LLC. Redistribution or reproduction in whole or in part are prohibited without written permission of S&P Dow Jones Indices LLC. This document does not constitute an offer of services in jurisdictions where S&P Dow Jones Indices LLC, S&P, Dow Jones or their respective affiliates (collectively "S&P Dow Jones Indices") do not have the necessary licenses. Except for certain custom index calculation services, all information provided by S&P Dow Jones Indices is impersonal and not tailored to the needs of any person, entity or group of persons. S&P Dow Jones Indices receives compensation in connection with licensing its indices to third parties and providing custom calculation services. Past performance of an index is not an indication or guarantee of future results.

It is not possible to invest directly in an index. Exposure to an asset class represented by an index may be available through investable instruments based on that index. S&P Dow Jones Indices does not sponsor, endorse, sell, promote or manage any investment fund or other investment vehicle that is offered by third parties and that seeks to provide an investment return based on the performance of any index. S&P Dow Jones Indices makes no assurance that investment products based on the index will accurately track index performance or provide positive investment returns. S&P Dow Jones Indices LLC is not an investment advisor, and S&P Dow Jones Indices makes no representation regarding the advisability of investing in any such investment fund or other investment vehicle. A decision to invest in any such investment fund or other investment vehicle should not be made in reliance on any of the statements set forth in this document. Prospective investors are advised to make an investment in any such fund or other vehicle only after carefully considering the risks associated with investing in such funds, as detailed in an offering memorandum or similar document that is prepared by or on behalf of the issuer of the investment fund or other investment product or vehicle. S&P Dow Jones Indices LLC is not a tax advisor. A tax advisor should be consulted to evaluate the impact of any tax-exempt securities on portfolios and the tax consequences of making any particular investment decision. Inclusion of a security within an index is not a recommendation by S&P Dow Jones Indices to buy, sell, or hold such security, nor is it considered to be investment advice.

In no event shall S&P Dow Jones Indices Parties be

liable to any party for any direct, indirect, incidental, exemplary, compensatory, punitive, special or consequential damages, costs, expenses, legal fees, or losses (including, without limitation, lost income or lost profits and opportunity costs) in connection with any use of the Content even if advised of the possibility of such damages.

S&P Global keeps certain activities of its various divisions and business units separate from each other in order to preserve the independence and objectivity of their respective activities. As a result, certain divisions and business units of S&P Global may have information that is not available to other business units. S&P Global has established policies and procedures to maintain the confidentiality of certain non-public information received in connection with each analytical process.

In addition, S&P Dow Jones Indices provides a wide range of services to, or relating to, many organizations, including issuers of securities, investment advisers, broker-dealers, investment banks, other financial institutions and financial intermediaries, and accordingly may receive fees or other economic benefits from those organizations, including organizations whose securities or services they may recommend, rate, include in model portfolios, evaluate or otherwise address.

The Global Industry Classification Standard (GICS®) was developed by and is the exclusive property and a trademark of S&P and MSCI. Neither MSCI, S&P nor any other party involved in making or compiling any GICS classifications makes any express or implied warranties or representations with respect to such standard or classification (or the results to be obtained by the use thereof), and all such parties hereby expressly disclaim all warranties of originality, accuracy, completeness, merchantability or fitness for a particular purpose with respect to any of such standard or classification. Without limiting any of the foregoing, in no event shall MSCI, S&P, any of their affiliates or any third party involved in making or compiling any GICS classifications have any liability for any direct, indirect, special, punitive, consequential or any other damages (including lost profits) even if notified of the possibility of such damages.
