iBoxx EUR Sovereigns Eurozone Yield Plus Interest Rate Hedged Index

The iBoxx EUR Sovereigns Eurozone Yield Plus Interest Rate Hedged Index aims to track the performance of a portfolio comprised of EUR-denominated investment grade government bonds issued by the five highest yielding countries chosen among the member countries of the Eurozone while minimising the effect of changes in market interest rates as represented by German government bond yields. The Index aims to achieve a zero duration by taking a long position in the iBoxx EUR Sovereigns Eurozone Yield Plus Index (“Underlying Index”) and short positions in German government bond futures contracts. Duration herein refers to the sensitivity of bond prices to movements in interest rates.

The Underlying Index is a total return index designed to track the performance of a portfolio comprised of EUR-denominated investment grade government bonds issued by the five highest yielding countries chosen among the member countries of the Eurozone.

The eligible contracts for the short position include: Euro-Schatz Futures, Euro-Bobl Futures and the EuroBund Futures.

The iBoxx EUR Sovereigns Eurozone Yield Plus Interest Rate Hedged Index is rebalanced once a month at the month-end (the “rebalancing date”).

Additionally, the index rules and their application will be governed by two Index Advisory Committees.

This document covers the index family structure, rules and calculation methodology.

Selection Criteria

Hedged Index

The index has long positions in the iBoxx EUR Sovereigns Eurozone Yield Plus Index and short positions in the Euro-Schatz, Euro-Bobl and Euro-Bund front month quarterly futures contracts.

Long Position

iBoxx EUR Sovereigns Eurozone Yield Plus Index is a total return index designed to track the performance of a portfolio comprised of EUR-denominated investment grade government bonds issued by the five highest yielding countries chosen among the member countries of the Eurozone. Detailed methodology for the iBoxx EUR Sovereigns Eurozone Yield Plus Index is available on www.spglobal.com/spdji.

Short Position

The eligible front month contracts for the short position include the Euro-Schatz, Euro-Bobl and Euro-Bund futures. The contracts follow a quarterly cycle and expire in March, June, September and December.

The “Cheapest-To-Deliver” bonds (“CTD”) for each futures contract are determined at every rebalancing.

Index Calculation

Bond and Futures Prices

The closing prices from Eurex from 5:15 CET are used for the futures.

The iBoxx EUR Sovereigns Eurozone Yield Plus indices are priced based on multiple data inputs.

For more details on the bond prices, please refer to the *iBoxx Pricing Methodology* document, available at www.spglobal.com/spdji.

Index Rebalancing

The iBoxx EUR Sovereigns Eurozone Yield Plus Interest Rate Hedged Index is rebalanced monthly on the last business day of the month after the close of business.

The iBoxx EUR Sovereigns Eurozone Yield Plus Interest Rate Hedged Index uses futures contracts to fully hedge the duration of the Underlying Index. The hedge positions are reset to achieve zero duration at each monthly rebalancing day.

On the last business day of each month, S&P DJI publishes the final membership.

Rebalancing Procedure

At each rebalancing day the notional of each futures contract is determined using the following steps:

- Determine the Cheapest-To-Deliver bond (“CTD”) of each futures contract
- Associate each bond with futures contract based on the annual modified duration of the bonds
- Calculate the notional of each futures contract

Index Data

The calculation of the index is based on bid prices. New securities are included in the index at their respective ask prices when they enter the index family. If no price can be established for a particular security, the index continues to be calculated based on the last available price. This might be the case in periods of market stress, or disruption as well as in illiquid or fragmented markets. If the required inputs become impossible to obtain, S&P DJI may consult market participants prior to the next rebalancing date. Decisions are made publicly available on a timely basis and S&P DJI may refer back to previous cases.

The rebalancing takes place after close of market on the last trading day of a rebalancing month.

Determination of Cheapest-To-Deliver Bond

The CTD bond is the least expensive bond that can be delivered upon expiry to satisfy the requirements of a futures contract.

The CTD bond is used as the proxy of a futures contract in determining the number of contracts required to fully hedge the index.

Underlying Bond Assignment

All bonds are associated with one of the futures contract as follows:

- Bonds from, but excluding, 0 years to and including 3 years' annual modified duration are hedged using the Euro-Schatz futures contract.
- Bonds from, but excluding, 3 years to and including 7 years' annual modified duration are hedged using the Euro-Bobl futures contract.
- Bonds with more than 7 years' annual modified duration are hedged using the Euro-Bund futures contract.

Calculation of the Notional of the Futures Contracts

The notional of the *j*-th futures contract on the rebalancing day is calculated as below:

$$N_{j,t-s}^F = \frac{CF_{j,t-s}^{CTD} \sum_{i=1}^n \delta_{i,j,t-s} BMV_{i,t-s} MD_{i,t-s}}{P_{j,t-s}^{CTD} MD_{j,t-s}^{CTD} FCS_j}$$

where:	
$N_{j,t-s}^F$	denotes the notional of the <i>j</i> -th futures contract on the rebalancing day
CF_j^{CTD}	denotes the conversion factor of the <i>j</i> -th CTD bond
FCS_j	denotes the contract size (EUR face value) of the <i>j</i> -th futures*
$P_{j,t-s}^{CTD}$	denotes the price of the CTD of the <i>j</i> -th futures contract on the rebalancing day
$MD_{j,t-s}^{CTD}$	denotes the annual modified duration of the <i>j</i> -th CTD bond on the rebalancing day
$MD_{i,t-s}$	denotes the annual modified duration of the <i>i</i> -th bond on the rebalancing day
$\delta_{i,j,t-s}$	is equal to 1 for bond <i>i</i> , if the bond is assigned to the associated <i>j</i> -th futures contract, otherwise 0
<i>i</i>	denotes the <i>i</i> -th bond on rebalancing day
<i>j</i>	denotes the <i>j</i> -th futures contract on rebalancing day

*The contract size is EUR100,000 for the Euro-Bund Futures, Euro-Bobl and Euro-Schatz Futures contracts.

Weight of Futures Contracts

The weight of futures contract in the overall short position on rebalancing day *t-s* is calculated as below:

$$W_{j,t-s}^S = \frac{N_{j,t-s}^F}{\frac{\sum_{i=1}^n BMV_{i,t-s}}{FCS_j}}$$

where:	
$W_{j,t-s}^S$	denotes the weight of the <i>j</i> -th futures contract in short position on the rebalancing day
$N_{j,t-s}^F$	denotes the notional of the <i>j</i> -th futures contract on the rebalancing day
	denotes the contract size (EUR face value) of the <i>j</i> -th futures*

FCS_j	
i	denotes the i -th bond on rebalancing day
j	denotes the j -th futures contract on rebalancing day

*The contract size is EUR100,000 for the Euro-Bund Futures, Euro-Bobl and Euro-Schatz Futures contracts.

Index Calculation

The index is calculated on every index business day.

The index level on index day t is:

$$IL_t = IL_{t-s} \times (1 - u_{t-s}^{roll} \times rollcost) \times (1 + ((IL_t^{long} / IL_{t-s}^{long}) - 1) - \sum_{j=1}^3 W_{j,t-s}^S \times (P_{j,t}^F - P_{j,t-s}^F))$$

where:	
IL_t	denotes the index level on day
IL_{t-s}	denotes the index level on rebalancing day
u_{t-s}^{roll}	denotes the roll cost indicator. The indicator will be 1 if t is the month following the roll date, otherwise 0
IL_t^{long}	denotes the index level of the long position on day
IL_{t-s}^{long}	denotes the index level of the long position on rebalancing day
$W_{j,t-s}^S$	denotes the weight of the j -th futures contract in short position on the rebalancing day
$P_{j,t}^F$	denotes the price of the j -th futures contract on day t
$P_{j,t-s}^F$	denotes the price of the j -th futures on the rebalancing day
$rollcost$	denotes the actual rollcost; it is assumed to be 1bp

For specific index formulae, please refer to the *iBoxx Bond Calculus* document, available at www.spglobal.com/spdji.

Roll Process

At the rebalancing day prior to the delivery month the futures contract is rolled into the new front month quarterly futures contract. The roll cost is assumed to be 1bp.

Monthly Re-investment

Cash from the long position and positive P/L from the short futures positions is reinvested in the Underlying Index. Negative P/L from the short futures positions is deducted from the long position.

Index History

The Index history starts on 31 December 2004. The index has a base value of 100 on that date.

Settlement Conventions

All iBoxx indices calculate using the assumption of T+0 settlement days.

Calendar

S&P DJI publishes an index calculation calendar available on <https://www.spglobal.com/spdji/en/>. This calendar provides an overview of the index calculation holidays of the iBoxx bond index families each year.

Publication of the Index

The iBoxx EUR Sovereigns Eurozone Yield Plus Interest Rate Hedged Index is calculated as end-of-day index and distributed once daily after market close.

Bond and index analytical values are calculated end of day Monday to Friday using that day's closing prices. In addition, bond and index analytical values are calculated using the previous trading day's closing prices on the last calendar day of each month if that day is not a regular trading day as well as on common bank holidays as published in the iBoxx index calculation calendar. This index calculation calendar is available at <https://www.spglobal.com/spdji/en/> under *iBoxx Indices Calendars*. Index data is also available from the main information vendors.

Closing index values and key statistics are published at the end of each calculation day in the *Indices* section of the website for registered users.

Data Publication and Access

The table below summarizes the publication of the index at www.spglobal.com/spdji for registered users and on the FTP server.

In addition to the indices detailed in this methodology, other indices covered by this document may be available. For a list of available indices, please refer [here](#).

Frequency, File type and Access

Frequency	File Type	Access
Daily	Underlying file – Bond level	FTP Server
	Indices file – Index level	FTP Server / website / BBG for index levels only
Daily from the sixth calendar day of the month (or the next index publication day if the sixth calendar day falls on a non-business day)	Forwards	FTP Server
Monthly	End of Month Components	FTP Server / website

Below is a summary of the identifiers for each publication channel:

Index Name	iBoxx EUR Sovereigns Eurozone Yield Plus Interest Rate Hedged Index
Return Type	TRi
SEDOL	BGJZKP2
ISIN	GB00BGJZKP29
Ticker	IBXXH7EU
RIC	.IBXXH7EU

Index Governance

Index Committee

An Index Committee maintains the indices. All committee members are full-time professionals at S&P Dow Jones Indices. Meetings are held regularly. The Index Committee oversees the management of the indices, including determinations of intra-rebalancing changes, maintenance and inclusion policies, and other matters affecting the maintenance and calculation of the indices.

In fulfilling its responsibilities, the Index Committee has full and complete discretion to (i) amend, apply, or exempt the application of index rules and policies as circumstances may require and (ii) add, remove, or by-pass any bond in determining the composition of an index.

The Index Committee may rely on any information or documentation submitted to it or gathered by it that the Index Committee believes to be accurate. The Index Committee reserves the right to reinterpret publicly available information and to make changes to the indices based on a new interpretation of that information at its sole discretion. All Index Committee discussions are confidential.

The Index Committee is separate from and independent of other analytical groups at S&P Global. In particular, the Index Committee has no access to or influence on decisions by S&P Global Ratings analysts.

S&P Dow Jones Indices' Index Committees reserve the right to make exceptions when applying the methodology if the need arises. In any scenario where the treatment differs from the general rules stated in this document or supplemental documents, clients will receive sufficient notice, whenever possible.

In addition to the daily governance of indices and maintenance of index methodologies, at least once within any 12-month period, the Index Committee reviews the methodology to ensure the indices continue to achieve the stated objectives, and that the data and methodology remain effective. In certain instances, S&P Dow Jones Indices may publish a consultation inviting comments from external parties.

For more information on index governance policies, please refer [here](#).

1. The information contained in this Appendix is intended to meet the requirements of the European Union Commission Delegated Regulation (EU) 2020/1817 supplementing Regulation (EU) 2016/1011 of the European Parliament and of the Council as regards the minimum content of the explanation of how environmental, social and governance factors are reflected in the benchmark methodology and the retained EU law in the UK (The Benchmarks (amendment and Transitional Provision) (EU Exit) Regulations 2019).

2. The 'underlying assets' are defined in European Union Commission Delegated Regulation (EU) 2020/1816 supplementing Regulation (EU) 2016/1011 of the European Parliament and of the Council as regards the explanation in the benchmark statement of how environmental, social and governance factors are reflected in each benchmark provided and published.

Disclaimer

Performance Disclosure/Back-Tested Data

Where applicable, S&P Dow Jones Indices and its index-related affiliates (“S&P DJI”) defines various dates to assist our clients by providing transparency. The First Value Date is the first day for which there is a calculated value (either live or back-tested) for a given index. The Base Date is the date at which the index is set to a fixed value for calculation purposes. The Launch Date designates the date when the values of an index are first considered live: index values provided for any date or time period prior to the index’s Launch Date are considered back-tested. S&P DJI defines the Launch Date as the date by which the values of an index are known to have been released to the public, for example via the company’s public website or its data feed to external parties. For Dow Jones-branded indices introduced prior to May 31, 2013, the Launch Date (which prior to May 31, 2013, was termed “Date of introduction”) is set at a date upon which no further changes were permitted to be made to the index methodology, but that may have been prior to the Index’s public release date.

Please refer to the methodology for the Index for more details about the index, including the manner in which it is rebalanced, the timing of such rebalancing, criteria for additions and deletions, as well as all index calculations.

Information presented prior to an index’s launch date is hypothetical back-tested performance, not actual performance, and is based on the index methodology in effect on the launch date. However, when creating back-tested history for periods of market anomalies or other periods that do not reflect the general current market environment, index methodology rules may be relaxed to capture a large enough universe of securities to simulate the target market the index is designed to measure or strategy the index is designed to capture. For example, market capitalization and liquidity thresholds may be reduced. In addition, forks have not been factored into the back-test data with respect to the S&P Cryptocurrency Indices. For the S&P Cryptocurrency Top 5 & 10 Equal Weight Indices, the custody element of the methodology was not considered; the back-test history is based on the index constituents that meet the custody element as of the Launch Date. Also, the treatment of corporate actions in back-tested performance may differ from treatment for live indices due to limitations in replicating index management decisions. Back-tested performance reflects application of an index methodology and selection of index constituents with the benefit of hindsight and knowledge of factors that may have positively affected its performance, cannot account for all financial risk that may affect results and may be considered to reflect survivor/look ahead bias. Actual returns may differ significantly from, and be lower than, back-tested returns. Past performance is not an indication or guarantee of future results.

Typically, when S&P DJI creates back-tested index data, S&P DJI uses actual historical constituent-level data (e.g., historical price, market capitalization, and corporate action data) in its calculations. As ESG investing is still in early stages of development, certain datapoints used to calculate certain ESG indices may not be available for the entire desired period of back-tested history. The same data availability issue could be true for other indices as well. In cases when actual data is not available for all relevant historical periods, S&P DJI may employ a process of using “Backward Data Assumption” (or pulling back) of ESG data for the calculation of back-tested historical performance. “Backward Data Assumption” is a process that applies the earliest actual live data point available for an index constituent company to all prior historical instances in the index performance. For example, Backward Data Assumption inherently assumes that companies currently not involved in a specific business activity (also known as “product involvement”) were never involved historically and similarly also assumes that companies currently involved in a specific business activity were involved historically too. The Backward Data Assumption allows the hypothetical back-test to be extended over more historical years than would be feasible using only actual data. For more information on “Backward Data Assumption” please refer to the FAQ. The methodology and factsheets of any index that employs backward assumption in the back-tested history will explicitly state so. The methodology will include an Appendix with a table setting forth the specific data points and relevant time period for which backward projected data was used. Index returns shown do not

represent the results of actual trading of investable assets/securities. S&P DJI maintains the index and calculates the index levels and performance shown or discussed but does not manage any assets.

Index returns do not reflect payment of any sales charges or fees an investor may pay to purchase the securities underlying the Index or investment funds that are intended to track the performance of the Index. The imposition of these fees and charges would cause actual and back-tested performance of the securities/fund to be lower than the Index performance shown. As a simple example, if an index returned 10% on a US \$100,000 investment for a 12-month period (or US \$10,000) and an actual asset-based fee of 1.5% was imposed at the end of the period on the investment plus accrued interest (or US \$1,650), the net return would be 8.35% (or US \$8,350) for the year. Over a three-year period, an annual 1.5% fee taken at year end with an assumed 10% return per year would result in a cumulative gross return of 33.10%, a total fee of US \$5,375, and a cumulative net return of 27.2% (or US \$27,200).

ESG Indices Disclaimer

S&P DJI provides indices that seek to select, exclude, and/or weight index constituents based on, but not limited to, certain environmental, social or governance (ESG) indicators, or a combination of those indicators, including the following: environmental indicators (including the efficient use of natural resources, the production of waste, greenhouse gas emissions, or impact on biodiversity); social indicators (such as, inequality and investment in human capital); governance indicators (such as sound management structures, employee relations, remuneration of staff, tax compliance, respect for human rights, anti-corruption and anti-bribery matters), specific sustainability or values-related company involvement indicators (for example, production/distribution of controversial weapons, tobacco products, or thermal coal), or controversies monitoring (including research of media outlets to identify companies involved in ESG-related incidents).

S&P DJI ESG indices use ESG metrics and scores in the selection and/or weighting of index constituents. ESG scores or ratings seek to measure or evaluate a company's, or an asset's, performance with respect to environmental, social and corporate governance issues.

The ESG scores, ratings, and other data used in S&P DJI ESG indices is supplied directly or indirectly by third parties (note these parties can be independent affiliates of S&P Global or unaffiliated entities) so an S&P DJI ESG index's ability to reflect ESG factors depends on these third parties' data accuracy and availability.

ESG scores, ratings, and other data may be reported (meaning that the data is provided as disclosed by companies, or an asset, or as made publicly available), modelled (meaning that the data is derived using a proprietary modelling process with only proxies used in the creation of the data), or reported and modelled (meaning that the data is either a mix of reported and modelled data or is derived from the vendor using reported data /information in a proprietary scoring or determination process).

ESG scores, ratings, and other data, whether from an external and/or internal source, is based on a qualitative and judgmental assessment, especially in the absence of well-defined market standards, and due to the existence of multiple approaches and methodologies to assess ESG factors and considerations. An element of subjectivity and discretion is therefore inherent in any ESG score, rating, or other data and different ESG scoring, rating, and/or data sources may use different ESG assessment or estimation methodologies. Different persons (including ESG data ratings, or scoring providers, index administrators or users) may arrive at different conclusions regarding the sustainability or impact of a particular company, asset, or index.

Where an index uses ESG scores, ratings or other data supplied directly or indirectly by third parties, S&P DJI does not accept responsibility for the accuracy or completeness of such ESG scores, ratings, or data.

No single clear, definitive test or framework (legal, regulatory, or otherwise) exists to determine 'ESG', 'sustainable', 'good governance', 'no adverse environmental, social and/or other impacts', or other equivalently labelled objectives. In the absence of well-defined market standards and due to the existence of multitude approaches, the exercise of judgment is necessary. Accordingly, different persons may classify the same investment, product and/or strategy differently regarding 'ESG', 'sustainable', 'good governance', 'no adverse environmental, social and/or other impacts', or other equivalently labelled objectives. Furthermore, the legal and/or market position on what constitutes an 'ESG', 'sustainable', 'good governance', 'no adverse environmental, social and/or other impacts', or other equivalently labelled objectives may change over time, especially as further regulatory or industry rules and guidance are issued and the ESG sustainable finance framework becomes more sophisticated.

Prospective users of an S&P DJI ESG Index are encouraged to read the relevant index methodology and related disclosures carefully to determine whether the index is suitable for their potential use case or investment objective.
