Introduction

Index Objective

The JPX/S&P CAPEX & Human Capital Index measures the performance of companies in the Japanese equity market based on capital expenditure growth and efficiency, and investments in human capital. Constituents are weighted by the product of their float-adjusted market capitalization and composite capex and human capital score, subject to an individual company weight cap of 5%.

Capital expenditure growth and efficiency are assessed through a quantitative measure based on published data in public filings, while the human capital metric is assessed through scores provided by S&P Global Sustainable1.¹

Highlights

The index universe is drawn from the constituents of the Tokyo Stock Price Index (TOPIX)². Companies satisfying the liquidity, creditworthiness, profitability, and low beta eligibility factors form the selection universe. The 200 companies with the highest scores based on capex and R&D expense growth, capex revenue effect, and human capital scores are selected and form the JPX/S&P CAPEX & Human Capital Index.

Supporting Documents

This methodology is meant to be read in conjunction with supporting documents providing greater detail with respect to the policies, procedures and calculations described herein. References throughout the methodology direct the reader to the relevant supporting document for further information on a specific topic. The list of the main supplemental documents for this methodology and the hyperlinks to those documents is as follows:

Supporting Document	URL
S&P Dow Jones Indices' Equity Indices Policies & Practices Methodology	Equity Indices Policies & Practices
S&P Dow Jones Indices' Index Mathematics Methodology	Index Mathematics Methodology
S&P Dow Jones Indices' Float Adjustment Methodology	Float Adjustment Methodology

This methodology was created by S&P Dow Jones Indices to achieve the aforementioned objective of measuring the underlying interest of each index governed by this methodology document. Any changes to or deviations from this methodology are made in the sole judgment and discretion of S&P Dow Jones Indices so that the index continues to achieve its objective.

¹ Refer to *Appendix B* for more information.

² The TOPIX is calculated and published by the JPX Market Innovation & Research, Inc. For more information please refer to www.jpj.co.jp/english/.

Eligibility Criteria

Index Universe

At each rebalancing, the index universe is all constituents of the TOPIX.

Eligibility Factors

As of the rebalancing reference date, stocks in the index universe must satisfy the following criteria to be eligible for index inclusion:

- **Trading History:** have traded at least 200 active days over the past year.
- **Liquidity:** have JPY 100 billion of total value traded over the past year.
- **Creditworthiness:** satisfy the criteria described below:
 - Total assets greater than total liabilities in all of the three most recently reported fiscal years.
 - Positive operating income in at least one of the three most recently reported fiscal years.
 - Positive net income in at least one of the three most recently reported fiscal years.
- **Profitability:** have a non-negative
 - Three-year average operating income, defined as the average of the annual operating income figures from the three most recently reported fiscal years.
 - Three-year average net income, defined as the average of the annual net income figures from the three most recently reported fiscal years.
- **Listing:** be a constituent of the TOPIX as of the last business day of December, two years prior to the rebalancing reference date.

Low Beta Exclusions

After applying the above eligibility factors, stocks are sorted by beta (as defined in *Appendix A*) and the 70% of the stocks with the lowest betas are selected and form the eligible universe.

During the low beta screen, a 5% buffer is applied to current index constituents in order to reduce index turnover. A current constituent will remain eligible for index consideration at the annual reconstitution unless it is among the top 25% of float-adjusted weights when ranked by beta.

In cases where, after applying the above 5% buffer, the number of eligible companies is less than 200, the eligibility factors are relaxed as follows:

1. **Low Beta.** The low beta threshold is increased from 70% until the target count of 200 eligible companies is met.
2. **Profitability.** If after Step 1 the target count is still not met, the companies are sorted by their three-year average net income in descending order, and those with the smallest deficits are selected until the target count of 200 eligible companies is met.
3. **Profitability.** If after Step 2 the target count is still not met, companies are sorted by their three-year average operating income in descending order and those with the smallest operating deficits are selected until the target count of 200 eligible companies is met.

If after Step 3 the target count is still not met, all eligible companies are selected for index inclusion and the index will have less than 200 companies.

In extreme cases, if the number of eligible companies is less than 100, S&P Dow Jones Indices may relax the eligibility factors to ensure adequate index constituent representation. The decision to do so is at the sole discretion of the Index Committee.

Those companies passing the above eligibility factors form the selection universe.

Index Construction

Constituent Selection

Scores based on capex and R&D growth, capex revenue effect, and human capital are calculated for each company in the selection universe. Companies are then ranked based on their composite capex and human capital scores (see *Appendix B*) and selected as follows:

1. The top 180 companies are selected for index inclusion.
2. Existing constituent companies ranked 181-220 are selected in order of highest rank until the target constituent company count of 200 is reached.
3. If after Step 2 the target constituent company count is not met, non-constituent companies are selected in order of highest rank until the target constituent company count of 200 is reached.

Constituent Weightings

Each company is weighted by the product of its float-adjusted market capitalization and its composite capex and human capital score (see *Appendix B*), subject to an individual company weight cap of 5%. The capping algorithm redistributes the excess weight to other stocks in the index in proportion to their original modified market capitalization weight. Weight caps are applied twice a year during the annual reconstitution and mid-year review.

For more information on weighting schemes, please see S&P Dow Jones Indices' Index Mathematics Methodology.

Index Calculations

The index is calculated using the divisor methodology used in most S&P Dow Jones Indices' equity indices.

For more information on index level calculations please refer to the Non-Market Capitalization Weighted section of S&P Dow Jones Indices' Index Mathematics Methodology.

Index Maintenance

Rebalancing

Annual Reconstitution. The index undergoes a reconstitution, effective after the close of the third Friday of September. The reference date for data used in the annual reconstitution is after the close of the last trading day of August. Index shares are assigned based on prices seven business days prior to the rebalancing effective date.

Mid-Year Review. The index undergoes a mid-year reweighting, effective after the close of the third Friday of March. Constituent weights are updated based on each company's float-adjusted market capitalization as of the close of the last trading day of February, and the composite capex and human capital score computed during the annual reconstitution. The composite capex and human capital scores are not updated during the mid-year review.

Additions. No companies are added to the index between annual reconstitutions except for spin-offs as detailed in *Corporate Actions*.

Deletions. Deletions can occur due to acquisitions, mergers and spin-offs or due to bankruptcies or suspensions. A constituent is also removed from the index at the time when it is removed from the TOPIX.

Negative Screening

S&P Dow Jones Indices reviews the securities on the following JPX lists at the annual rebalancing. A stock that is under supervision, scheduled to delist, delisted, or designated as a trading alert security is not considered for index inclusion.

- <https://www.jpx.co.jp/english/listing/market-alerts/supervision/index.html> (Securities under supervision and securities to be delisted).
- <https://www.jpx.co.jp/english/listing/measures/alert/> (Designation of securities on special alert).
- <https://www.jpx.co.jp/english/listing/market-alerts/grace-period/index.html> (Issues in a grace period pertaining to delisting criteria).
- <https://www.jpx.co.jp/english/listing/stocks/delisted/index.html> (List of delisted companies).

Corporate Actions

Mergers and Acquisitions. Mergers and Acquisitions treatments are as follows:

- If two current index constituents merge, the combined company remains in the index at least until the next annual reconstitution, when it is reviewed for continuing eligibility. The merged company carries the combined weights.
- If a current index constituent acquires a non-constituent, the company remains in the index at its current weight.
- If a current index constituent is acquired by a non-constituent, the company is dropped from the index and its weight is redistributed proportionately to the remaining index constituents.

Spin-offs. A spin-off is added to the index at a zero price on the ex-date and is removed from the index after at least one day of regular way trading.

Delistings. If a company's shares are no longer available or are no longer trading, the company is deleted from the index as soon as reasonably practical, with every attempt to provide clients with advanced notice of two-to-five business days. In the event the delisting or bankruptcy information becomes public after the fact, the stock may be removed with advanced notice of one day. A company may be removed from the index at the discretion of the Index Committee.

For more information on Corporate Actions, please refer to the Non-Market Capitalization Weighted Indices section of S&P Dow Jones Indices' Equity Indices Policies & Practices Methodology.

Currency of Calculation and Additional Index Return Series

The index is calculated in Japanese yen and U.S. dollars.

Real-time spot Forex rates, as supplied by WMR, are used for ongoing index calculation. The end-of-day value of the index is calculated using the real-time spot exchange rate provided by WMR at the time the index is closed.

In addition to the indices detailed in this methodology, additional return series versions of the indices may be available, including, but not limited to the following: currency, currency hedged, decrement, fair value, inverse, leveraged, and risk control versions. For a list of available indices, please refer to the [S&P DJI Methodology & Regulatory Status Database](#).

For information on various index calculations, please refer to S&P Dow Jones Indices' Index Mathematics Methodology.

For the inputs necessary to calculate certain types of indices, including decrement, dynamic hedged, fair value, and risk control indices, please refer to the Parameters documents available at www.spglobal.com/spdji.

Base Dates and History Availability

Index history availability, base date, and base value for are shown in the table below.

Index	Launch Date	First Value Date	Base Date	Base Value
JPX/S&P CAPEX & Human Capital Index	04/27/2016	09/16/2005	09/16/2005	1000

Index Data

Calculation Return Types

S&P Dow Jones Indices calculates multiple return types which vary based on the treatment of regular cash dividends. The classification of regular cash dividends is determined by S&P Dow Jones Indices.

- Price Return (PR) versions are calculated without adjustments for regular cash dividends.
- Gross Total Return (TR) versions reinvest regular cash dividends at the close on the ex-date without consideration for withholding taxes.
- Net Total Return (NTR) versions, if available, reinvest regular cash dividends at the close on the ex-date after the deduction of applicable withholding taxes.

In the event there are no regular cash dividends on the ex-date, the daily performance of all three indices will be identical.

For a complete list of indices available, please refer to the daily index levels file (“SDL”).

For more information on the classification of regular versus special cash dividends as well as the tax rates used in the calculation of net return, please refer to S&P Dow Jones Indices' Equity Indices Policies & Practices Methodology.

For more information on the calculation of return types, please refer to S&P Dow Jones Indices' Index Mathematics Methodology.

Index Governance

Index Committee

An S&P Dow Jones Indices Index Committee maintains the index. The Index Committee meets regularly. At each meeting, the Index Committee reviews pending corporate actions that may affect index constituents, statistics comparing the composition of the index to the market, companies that are being considered as candidates for addition to the index, and any significant market events. In addition, the Index Committee may revise index policy covering rules for selecting companies, treatment of dividends, share counts or other matters.

S&P Dow Jones Indices considers information about changes to its indices and related matters to be potentially market moving and material. Therefore, all Index Committee discussions are confidential.

S&P Dow Jones Indices' Index Committees reserve the right to make exceptions when applying the methodology if the need arises. In any scenario where the treatment differs from the general rules stated in this document or supplemental documents, clients will receive sufficient notice, whenever possible.

In addition to the daily governance of indices and maintenance of index methodologies, at least once within any 12-month period, the Index Committee reviews the methodology to ensure the indices continue to achieve the stated objectives, and that the data and methodology remain effective. In certain instances, S&P Dow Jones Indices may publish a consultation inviting comments from external parties.

For information on Quality Assurance and Internal Reviews of Methodology, please refer to S&P Dow Jones Indices' Equity Indices Policies & Practices Methodology.

Index Policy

Announcements

All index constituents are evaluated daily for data needed to calculate index levels and returns. All events affecting the daily index calculation are typically announced in advance via the Index Corporate Events report (.SDE), delivered daily to all clients. Any unusual treatment of a corporate action or short notice of an event may be communicated via email to clients.

For more information, please refer to the Announcements section of S&P Dow Jones Indices' Equity Indices Policies & Practices Methodology.

Pro-forma Files

In addition to the corporate events file (.SDE), S&P Dow Jones Indices provides constituent pro-forma files each time the index rebalances. The pro-forma file is typically provided in advance of the rebalancing date and contains all constituents as well as their corresponding weights and index shares effective for the upcoming rebalancing. Since index shares are assigned based on prices prior to the rebalancing effective date, the actual weight of each stock at the rebalancing differs from these weights due to market movements.

Please visit www.spglobal.com/spdji for a complete schedule of rebalancing timelines and pro-forma delivery times.

Holiday Schedule

The index is calculated daily, throughout the calendar year. The only days the index is not calculated are on days when all exchanges where the index's constituents are listed are officially closed.

A complete holiday schedule for the year is available at www.spglobal.com/spdji.

Rebalancing

The Index Committee may change the date of a given rebalancing for reasons including market holidays occurring on or around the scheduled rebalancing date. Any such change will be announced with proper advance notice where possible.

Unexpected Exchange Closures

For information on Unexpected Exchange Closures, please refer to S&P Dow Jones Indices' Equity Indices Policies & Practices Methodology.

Recalculation Policy

For information on the recalculation policy, please refer to S&P Dow Jones Indices' Equity Indices Policies & Practices Methodology.

For information on Calculations and Pricing Disruptions, Expert Judgment and Data Hierarchy, please refer to S&P Dow Jones Indices' Equity Indices Policies & Practices Methodology.

Contact Information

For questions regarding an index, please contact: index_services@spglobal.com.

Index Dissemination

Index levels are available through S&P Dow Jones Indices' Web site at www.spglobal.com/spdji, major quote vendors (see codes below), numerous investment-oriented Web sites, and various print and electronic media.

Tickers

The table below lists headline indices covered by this document. All versions of the below indices that may exist are also covered by this document. Please refer to the [S&P DJI Methodology & Regulatory Status Database](#) for a complete list of indices covered by this document.

Index (Currency)	Return Type	BBG	RIC	QUICK
JPX/S&P CAPEX & Human Capital Index (JPY)	Price Return	SPCHCJP	.SPCHCJP	SSPCHCJP/SPJ
	Total Return	SPCHCJT	.SPCHCJT	SSPCHCJT/SPJ
	Net Total Return	SPCHCJN	.SPCHCJN	SSPCHCJN/SPJ

Index Data

Daily constituent and index level data are available via subscription.

For product information, please contact S&P Dow Jones Indices, www.spglobal.com/spdji/en/contact-us.

Web site

For further information, please refer to S&P Dow Jones Indices' Web site at www.spglobal.com/spdji.

Appendix A

Beta Calculation

A security's beta is used in order to refine the index's eligible universe.

Key characteristics of the beta calculations include:

Reference index:	TOPIX (published by JPXI)
Frequency of return data:	Daily
Estimation window / half-life:	Five-year (5) estimation window, two-and-one-half-year (2 ½) half-life.
Non-synchronous returns:	Scholes-Williams approach.
Estimation bias handling:	Shrink towards 1.0 using the Vasicek approach (i.e., shrink based on each beta's standard error).
Extreme beta estimates:	Winsorize at 0.5 and 2.0.

On each of the reconstitution reference dates, S&P Dow Jones Indices uses up to five years of daily returns to compute Scholes-Williams betas with exponential weights and Vasicek shrinkage.

Non-trading Days

Non-trading days are business days where a company's stock return is missing, but the reference index is calculated. Non-trading days are excluded from the beta calculation and the stock's return for the subsequent day is converted into a multi-day return. Multi-day returns are used for up to five days. If a stock does not trade for more than five consecutive days, the non-trading days are excluded from the beta calculation, as is the first day trading resumes.

Return Calculations

Stock price and index returns for beta calculations are as follows:

1. S&P Dow Jones Indices uses five years of closing price history for both the stock and the reference index.
2. In rare cases when a daily stock price is available, but the reference index value is not, this day's observation is excluded from the beta calculation.
3. The stock return is computed as:

$$\text{StockReturn} = \frac{\text{ClosePrice} - \text{PreviousDayClosePrice}}{\text{PreviousDayClosePrice}}$$

4. The index return is computed as:

$$\text{IndexReturn} = \frac{\text{IndexValue} - \text{PreviousDayIndexValue}}{\text{PreviousDayIndexValue}}$$

5. These stock and reference index returns are used for the beta calculations.

Exceptions Handling

1. In some cases, a stock may have the same price for two consecutive days and the price return is 0.0%. This is a valid scenario and this observation, in addition to the corresponding index return, is used for the beta calculation.

2. If a stock's closing price is reported to S&P Dow Jones Indices as a zero or a null value, it is excluded from the return calculation, as is its corresponding index value.
3. If a stock does not trade for more than five consecutive days, the non-trading days are excluded from the beta calculation, as is the first day trading resumes.
4. Standard beta calculations are for a five-year time period. However, if a stock does not have five years of closing values, S&P Dow Jones Indices will calculate beta values based on the stock's length of trading history.

Exponential Weighting

The calculation of beta places more weight on recent observations, with exponential decay and a half-life of 2.5 years.

Exponential weights are based on a stock's trading days. W_d is the weight on day d , where d ranges from 1 to D , the total number of valid stock returns in the estimation window. D can be up to five years (1,260 observations) if closing prices are available. Day d is measured from the reconstitution reference date, where $d = 1$ means the data point is one trading day away from the reconstitution reference date, and $d = D$ means the data point is 1,260 trading days away from the reconstitution reference date.

$$W_d = 2^{-d/\lambda}$$

where:

$$\lambda = 630 \text{ days (the half-life of the decay for all stocks)}$$

Scholes-Williams Beta

In the formulae for beta estimation for stock i below, the subscript t refers to daily observations used in the estimation, where t ranges from 1 to T , the total number of observations used (after removing dates with missing stock returns).

$$Stk_{i,t} = \log(1 + \text{return of stock } i \text{ on day } t);$$

$$Ind_t = \log(1 + \text{return of index on day } t);$$

$$Ind3_t = Ind_{t-1} + Ind_t + Ind_{t+1} = \text{the three-day return on the index}$$

The Scholes-Williams Beta is the ratio of two regression coefficients:

$$\beta_{sw,i} = \frac{Cov(Stk_{i,t}, Ind3_t) / Var(Ind3_t)}{Cov(Ind_t, Ind3_t) / Var(Ind3_t)}$$

The variances $Var()$ and covariances $Cov()$ are computed using both stock and index returns, weighted by the exponential weight W_t .

Vasicek Shrinkage

Betas are shrunk towards one (1) based on the standard error of the estimates.

For each stock i , Scholes-Williams betas are estimated, and one-day betas are also estimated using a linear regression with exponential weights.

$$Stk_{i,t} = \alpha_i + \beta_i Ind_t + U_{SW,i,t}$$

Scholes-Williams residuals are:

$$U_{SW,i,t} = Stk_{i,t} - \alpha_i - \beta_i Ind_t$$

The volatility of the residuals is calculated as:

W_t = Exponential weight for observation t

$\sigma_{e,i}^2$ = Decay-weighted variance of Scholes-Williams residuals

$$\sigma_{e,i}^2 = \frac{1}{T-1} \sum_{t=1}^T (U_{SW,i,t} w_t - \overline{U_{SW,i} w})^2$$

or written as

$$\sigma_{e,i}^2 = \frac{1}{T-1} \sum_{t=1}^T U_{SW,i,t} w_t^2 - \frac{1}{T(T-1)} \left(\sum_{t=1}^T U_{SW,i,t} w_t \right)^2$$

where:

T = The total number of observations (when there are no missing returns in the observation window, $T = D = 1,260$)

Autocorrelation terms and the index variance are as follows:

ρ_i = Correlation ($Stk_{i,t}, Stk_{i,t-1}$)

ρ_{Ind3} = Correlation($Ind3_t, Ind3_{t-1}$)

σ_{Ind3}^2 = Variance($Ind3$)

Regression coefficient of Ind against Ind3 is expressed as:

$$\beta_{Ind,Ind3} = \frac{Cov(Ind, Ind3)}{Var(Ind3)}$$

Scholes-Williams standard error is given by:

$$\sigma_{SW,i} = \left(\frac{\sigma_{e,i}^2}{T-2} \frac{1 + 2\rho_i \rho_{Ind3}}{\beta_{Ind,Ind3}^2 \sigma_{Ind3}^2} \right)^{\frac{1}{2}}$$

Scholes-Williams betas with Vasicek shrinkage is:

$$k_i = 1 - \frac{\sigma_{SW,i}^2}{\sigma_{SW,i}^2 + \text{Cross sectional Dispersion of } \beta_{SW,i}}$$

$$\beta_{SW,i}^{vasicek} = k_i * \beta_{SW,i} + (1 - k_i)$$

Appendix B

Composite Capex and Human Capital Score Calculation

The first step to determine the overall composite capex and human capital score is to calculate, as of the reconstitution reference date, the capex and R&D expense growth ratio, capex revenue effect ratio, and human capital score for each company in the eligible universe.

Capex and R&D Expense Growth Ratio

Capex and R&D expense growth is calculated for non-financial companies with reported R&D expenses in the three most recently reported fiscal years.

$$\text{Capex and R\&D Expense Growth} = \frac{\text{Sum of Latest Fiscal Year's Capex and R\&D Expense}}{\text{Three - year Average Capex and R\&D Expense}} - 1$$

For all financial companies and non-financial companies without reported R&D expenses in the three most recently reported fiscal years, only capex growth is calculated.

$$\text{Capex Growth} = \frac{\text{Latest Fiscal Year's Capex}}{\text{Three - year Average Capex}} - 1$$

Capex Revenue Effect Ratio

This is calculated as a company's latest revenue divided by its cumulative capex for the three most recently reported fiscal years.

$$\text{Capex Revenue Effect} = \frac{\text{Latest Fiscal Year's Revenue}}{\text{Three - year Cumulative Capex}}$$

Human Capital Score

The human capital score is obtained as of the reconstitution reference date from the prior year assessment available for each company from S&P Global Sustainable1 and considers four criteria components used in S&P Global's Corporate Sustainability Assessment (CSA).³ These criteria are assessed for all industries based on publicly disclosed data as well as data provided directly from companies that participate in the CSA. The four criteria are:

Human Capital Development. A company receives a score based on its ability to quantify and proactively manage its investments in human capital. A company scores well if it is able to achieve the following:

- Track and report quantitative measures of its training and development programs.
- Effectively explain the link between its development programs and the impact on its business.
- Quantify the economic benefits of its human capital investments and demonstrate higher economic value from these investments over time.

³ For a more information on the S&P Global CSA methodology and the CSA Questionnaires, please visit <https://www.spglobal.com/esg/csa/methodology/>.

Talent Attraction & Retention. A company receives a score based on its employee turnover rate and its ability to achieve the following:

- Demonstrate effective measures for evaluating employee performance.
- Provide long-term employee incentives (given that this is essential to the long-term performance of companies).
- Effectively maintain a relatively low turnover rate and retain talent over time.

Labor Practice Indicators. A company receives a score based on its ability to demonstrate gender equality within its organization and strong commitment to employee human rights. A company scores well if it can demonstrate the following:

- The retention of female employees from junior to senior management.
- Relatively equitable levels of pay among male and female employees in similar roles.
- Its employees are free to join an independent trade union.

Human Rights. A company receives a score based on its ability to demonstrate strong commitment to human rights and its ability to achieve the following:

- Develop a due diligence process to identify and assess impacts and risks related to human rights.
- Proactively conduct an assessment of potential human rights issues.

Each company receives a score from 0 to 100 for each of the four criteria detailed above. The Labor Practice Indicators and Human Rights criteria are equal weighted to derive a single score from 0 to 100 for Labor Practice Indicators and Human Rights. This single score, and the two other criteria scores, are then equally-weighted to obtain an overall Human Capital score from 0 to 100 for each company.

Outlier Handling and Winsorization

Outlier capex and R&D expense growth ratios, and capex revenue effect ratios are winsorized to ensure that the average values used to calculate the overall composite capex and human capital score are less distorted by extreme values. For a given variable, the values for all eligible companies are first ranked in ascending order. Then, for companies that lie above the 97.5 percentile rank or below the 2.5 percentile rank, their value is set as equal to the value of the 97.5 percentile ranked or the 2.5 percentile ranked company, whichever is applicable.

Z-score Computation

Computing a z-score is a widely adopted method of standardizing a variable in order to combine it with other variables that may have a different scale or unit of measurement. The z-score for the winsorized capex and R&D expense growth ratio, winsorized capex revenue effect ratio, and human capital score is calculated for each eligible company using the mean and standard deviation of the relevant variable within the eligible universe.

The z-score is calculated as follows:

$$z_{\alpha} = \frac{(x_{\alpha} - \mu_{\alpha})}{\sigma_{\alpha}}$$

where:

z_{α} = Z-score for a given company

x_{α} = Winsorized variable for a given company

μ_{α} = Arithmetic mean of the relevant variable in the eligible universe, excluding any missing values

σ_{α} = Standard deviation of the relevant variable in the eligible universe

Capping and Transformation of Z-scores

Z-scores of the capex and R&D expense growth ratio, and capex revenue effect ratio are winsorized to ensure that the average values used to calculate the composite capex and human capital score are less distorted by extreme values. To do this, z-scores for these two ratios are subject to a floor and ceiling of -2 and +2, respectively. Then, by adding 2 to each of these z-score values, they are transformed to a value within the range of 0 and 4.

All eligible companies with human capital scores above the average of the eligible universe are assigned positive z-scores, subject to a ceiling of 4. Companies with human capital scores below the average of the eligible universe and companies without human capital scores are assigned z-scores of 0.

Composite Capex and Human Capital Score

For each eligible company, the average z-score is computed by taking a simple average of the three scores to form the composite capex and human capital score. Where there is a missing value, the average z-score is computed by taking a simple average of the remaining two scores.

Appendix C

Methodology Changes

Methodology changes since April 27, 2016, are as follows:

Change	Effective Date (After Close)	Methodology	
		Previous	Updated
Eligibility Factors: Listing	09/20/2024	--	A company must be a constituent of the TOPIX as of the last business day of December, two years prior to the rebalancing reference date.
Human Capital Score	09/20/2024	The human capital score is obtained as of the reconstitution reference date from the latest assessment available for each company from S&P Global Sustainable ¹ and takes into account four criteria components used in S&P Global's Corporate Sustainability Assessment (CSA).	The human capital score is obtained as of the reconstitution reference date from the prior year assessment available for each company from S&P Global Sustainable ¹ and takes into account four criteria components used in S&P Global's Corporate Sustainability Assessment (CSA).

Disclaimer

Performance Disclosure/Back-Tested Data

Where applicable, S&P Dow Jones Indices and its index-related affiliates (“S&P DJI”) defines various dates to assist our clients by providing transparency. The First Value Date is the first day for which there is a calculated value (either live or back-tested) for a given index. The Base Date is the date at which the index is set to a fixed value for calculation purposes. The Launch Date designates the date when the values of an index are first considered live: index values provided for any date or time period prior to the index’s Launch Date are considered back-tested. S&P DJI defines the Launch Date as the date by which the values of an index are known to have been released to the public, for example via the company’s public website or its data feed to external parties. For Dow Jones-branded indices introduced prior to May 31, 2013, the Launch Date (which prior to May 31, 2013, was termed “Date of introduction”) is set at a date upon which no further changes were permitted to be made to the index methodology, but that may have been prior to the Index’s public release date.

Please refer to the methodology for the Index for more details about the index, including the manner in which it is rebalanced, the timing of such rebalancing, criteria for additions and deletions, as well as all index calculations.

Information presented prior to an index’s launch date is hypothetical back-tested performance, not actual performance, and is based on the index methodology in effect on the launch date. However, when creating back-tested history for periods of market anomalies or other periods that do not reflect the general current market environment, index methodology rules may be relaxed to capture a large enough universe of securities to simulate the target market the index is designed to measure or strategy the index is designed to capture. For example, market capitalization and liquidity thresholds may be reduced. In addition, forks have not been factored into the back-test data with respect to the S&P Cryptocurrency Indices. For the S&P Cryptocurrency Top 5 & 10 Equal Weight Indices, the custody element of the methodology was not considered; the back-test history is based on the index constituents that meet the custody element as of the Launch Date. Also, the treatment of corporate actions in back-tested performance may differ from treatment for live indices due to limitations in replicating index management decisions. Back-tested performance reflects application of an index methodology and selection of index constituents with the benefit of hindsight and knowledge of factors that may have positively affected its performance, cannot account for all financial risk that may affect results and may be considered to reflect survivor/look ahead bias. Actual returns may differ significantly from, and be lower than, back-tested returns. Past performance is not an indication or guarantee of future results.

Typically, when S&P DJI creates back-tested index data, S&P DJI uses actual historical constituent-level data (e.g., historical price, market capitalization, and corporate action data) in its calculations. As ESG investing is still in early stages of development, certain datapoints used to calculate certain ESG indices may not be available for the entire desired period of back-tested history. The same data availability issue could be true for other indices as well. In cases when actual data is not available for all relevant historical periods, S&P DJI may employ a process of using “Backward Data Assumption” (or pulling back) of ESG data for the calculation of back-tested historical performance. “Backward Data Assumption” is a process that applies the earliest actual live data point available for an index constituent company to all prior historical instances in the index performance. For example, Backward Data Assumption inherently assumes that companies currently not involved in a specific business activity (also known as “product involvement”) were never involved historically and similarly also assumes that companies currently involved in a specific business activity were involved historically too. The Backward Data Assumption allows the hypothetical back-test to be extended over more historical years than would be feasible using only actual data. For more information on “Backward Data Assumption” please refer to the FAQ. The methodology and factsheets of any index that employs backward assumption in the back-tested history

will explicitly state so. The methodology will include an Appendix with a table setting forth the specific data points and relevant time period for which backward projected data was used. Index returns shown do not represent the results of actual trading of investable assets/securities. S&P DJI maintains the index and calculates the index levels and performance shown or discussed but does not manage any assets.

Index returns do not reflect payment of any sales charges or fees an investor may pay to purchase the securities underlying the Index or investment funds that are intended to track the performance of the Index. The imposition of these fees and charges would cause actual and back-tested performance of the securities/fund to be lower than the Index performance shown. As a simple example, if an index returned 10% on a US \$100,000 investment for a 12-month period (or US \$10,000) and an actual asset-based fee of 1.5% was imposed at the end of the period on the investment plus accrued interest (or US \$1,650), the net return would be 8.35% (or US \$8,350) for the year. Over a three-year period, an annual 1.5% fee taken at year end with an assumed 10% return per year would result in a cumulative gross return of 33.10%, a total fee of US \$5,375, and a cumulative net return of 27.2% (or US \$27,200).

While S&P DJI has obtained information from sources it believes to be reliable, S&P DJI does not perform an audit or undertake independent verification of any information it receives. S&P DJI reserves the right to vary or discontinue any index at any time for regulatory or other reasons. Various factors, including external factors beyond S&P DJI's control might necessitate material changes to indices.

To the extent that regulatory authorities allow a rating agency to acknowledge in one jurisdiction a rating issued in another jurisdiction for certain regulatory purposes, S&P Global Ratings reserves the right to assign, withdraw or suspend such acknowledgement at any time and in its sole discretion. S&P Dow Jones Indices, including S&P Global Ratings, disclaim any duty whatsoever arising out of the assignment, withdrawal, or suspension of an acknowledgement as well as any liability for any damage alleged to have been suffered on account thereof. Affiliates of S&P Dow Jones Indices LLC, including S&P Global Ratings, may receive compensation for its ratings and certain credit-related analyses, normally from issuers or underwriters of securities or from obligors. Such affiliates of S&P Dow Jones Indices LLC, including S&P Global Ratings, reserve the right to disseminate its opinions and analyses. Public ratings and analyses from S&P Global Ratings are made available on its Web sites, www.standardandpoors.com (free of charge), and www.ratingsdirect.com and www.globalcreditportal.com (subscription), and may be distributed through other means, including via S&P Global Ratings publications and third-party redistributors. Additional information about our ratings fees is available at www.standardandpoors.com/usratingsfees.

S&P Global keeps certain activities of its various divisions and business units separate from each other to preserve the independence and objectivity of their respective activities. As a result, certain divisions and business units of S&P Global may have information that is not available to other business units. S&P Global has established policies and procedures to maintain the confidentiality of certain nonpublic information received in connection with each analytical process.

In addition, S&P Dow Jones Indices provides a wide range of services to, or relating to, many organizations, including issuers of securities, investment advisers, broker-dealers, investment banks, other financial institutions, and financial intermediaries, and accordingly may receive fees or other economic benefits from those organizations, including organizations whose securities or services they may recommend, rate, include in model portfolios, evaluate, or otherwise address.

Some indices use the Global Industry Classification Standard (GICS®), which was developed by, and is the exclusive property and a trademark of, S&P Global and MSCI. Neither MSCI, S&P DJI nor any other party involved in making or compiling any GICS classifications makes any express or implied warranties or representations with respect to such standard or classification (or the results to be obtained by the use

thereof), and all such parties hereby expressly disclaim all warranties of originality, accuracy, completeness, merchantability, or fitness for a particular purpose with respect to any of such standard or classification. Without limiting any of the foregoing, in no event shall MSCI, S&P DJI, any of their affiliates or any third party involved in making or compiling any GICS classifications have any liability for any direct, indirect, special, punitive, consequential or any other damages (including lost profits) even if notified of the possibility of such damages.

S&P Dow Jones Indices products are governed by the terms and conditions of the agreements under which they may be provided. A license is required from S&P Dow Jones Indices to display, create derivative works of and/or distribute any product or service that uses, is based upon and/or refers to any S&P Dow Jones Indices and/or index data.

ESG Indices Disclaimer

S&P DJI provides indices that seek to select, exclude, and/or weight index constituents based on, but not limited to, certain environmental, social or governance (ESG) indicators, or a combination of those indicators, including the following: environmental indicators (including the efficient use of natural resources, the production of waste, greenhouse gas emissions, or impact on biodiversity); social indicators (such as, inequality and investment in human capital); governance indicators (such as sound management structures, employee relations, remuneration of staff, tax compliance, respect for human rights, anti-corruption and anti-bribery matters), specific sustainability or values-related company involvement indicators (for example, production/distribution of controversial weapons, tobacco products, or thermal coal), or controversies monitoring (including research of media outlets to identify companies involved in ESG-related incidents).

S&P DJI ESG indices use ESG metrics and scores in the selection and/or weighting of index constituents. ESG scores or ratings seek to measure or evaluate a company's, or an asset's, performance with respect to environmental, social and corporate governance issues.

The ESG scores, ratings, and other data used in S&P DJI ESG indices is supplied directly or indirectly by third parties (note these parties can be independent affiliates of S&P Global or unaffiliated entities) so an S&P DJI ESG index's ability to reflect ESG factors depends on these third parties' data accuracy and availability.

ESG scores, ratings, and other data may be reported (meaning that the data is provided as disclosed by companies, or an asset, or as made publicly available), modelled (meaning that the data is derived using a proprietary modelling process with only proxies used in the creation of the data), or reported and modelled (meaning that the data is either a mix of reported and modelled data or is derived from the vendor using reported data /information in a proprietary scoring or determination process).

ESG scores, ratings, and other data, whether from an external and/or internal source, is based on a qualitative and judgmental assessment, especially in the absence of well-defined market standards, and due to the existence of multiple approaches and methodologies to assess ESG factors and considerations. An element of subjectivity and discretion is therefore inherent in any ESG score, rating, or other data and different ESG scoring, rating, and/or data sources may use different ESG assessment or estimation methodologies. Different persons (including ESG data ratings, or scoring providers, index administrators or users) may arrive at different conclusions regarding the sustainability or impact of a particular company, asset, or index.

Where an index uses ESG scores, ratings or other data supplied directly or indirectly by third parties, S&P DJI does not accept responsibility for the accuracy or completeness of such ESG scores, ratings, or data. No single clear, definitive test or framework (legal, regulatory, or otherwise) exists to determine 'ESG', 'sustainable', 'good governance', 'no adverse environmental, social and/or other impacts', or other equivalently labelled objectives. In the absence of well-defined market standards and due to the existence of multitude approaches, the exercise of judgment is necessary. Accordingly, different persons may classify the same investment, product and/or strategy differently regarding 'ESG', 'sustainable', 'good governance', 'no adverse environmental, social and/or other impacts', or other equivalently labelled

objectives. Furthermore, the legal and/or market position on what constitutes an 'ESG', 'sustainable', 'good governance', 'no adverse environmental, social and/or other impacts', or other equivalently labelled objectives may change over time, especially as further regulatory or industry rules and guidance are issued and the ESG sustainable finance framework becomes more sophisticated.

Prospective users of an S&P DJI ESG Index are encouraged to read the relevant index methodology and related disclosures carefully to determine whether the index is suitable for their potential use case or investment objective.
