CONTRIBUTION OF SECTORS TO S&P 500 DISPERSION*

COMMENTARY

- Consumer Discretionary was the top performing sector across the cap spectrum in Q3.
- Energy was the laggard across large, mid and small-caps.
- The contribution of cross-sector effects to total S&P 500 dispersion remained above its long-run average, indicating a greater potential relative reward to sector allocation.

*See pages 11-13 of "Sector Effects in the S&P 500®: The Role of Sectors, in Risk, Pricing, and Active Returns" for details on the strength of sector-level effects in the S&P 500.

**Utilities MidCap and SmallCap Capped Sectors include constituents of the GICS Utilities and Communication Services sectors.

***Financials & Real Estate MidCap and SmallCap Capped Sectors combines constituents of the GICS Financials and Real Estate sectors.

INDEX COMPOSITION

KEY TO FACTOR SCORINGS FOR INDICES

Factor Definitions

Each constituent of the S&P 1500 index is provided with a factor "score" for each of Beta, Volatility, Momentum, Dividend, Size, Value and Quality.

Factor	Measurement at single-stock level
Volatility	Trailing 12-month daily return volatility
Momentum	Twelve-month price change as of one month ago ("13 minus 1 momentum"), divided by the daily volatility during the twelve-month period that ended one month ago. For more details, see the S&P Momentum methodology
Value	The average of (normalized) earnings to price ratio, book to price ratio and sales to price ratio. For more details, see the S&P Value methodology.
Beta	Trailing 1 year beta of stock daily returns to the benchmark's return.
Dividend	Trailing 12-month dividend
Quality	The average of the (normalized) return on equity, the negative of the accruals ratio and the negative of the financial leverage ratio. For more details, see the S&P Quality methodology.
Size	Free-float market capitalization

Index Factor Ranking and Factor Diagram Scaling

Index Scores

Each index is provided a score in each factor from -100% to +100% based on how much of the total capitalization of the benchmark would must be excluded in order to provide a portfolio of stocks with similar exposure to that factor. This is done by examining a ranked series of hypothetical cap-weighted portfolios, including or excluding an increasing number of the stocks with the highest or lowest scores. An illustration of the process may be found at this [link](#).

Factor Diagram Axis

COMMENTARY

- The diagrams below illustrate factor exposures relative to the S&P 1500 across sectors, from large to small-caps.
- For example, large-cap Consumer Discretionary has approximately the same volatility as the S&P 1500, and becomes relatively more volatile at the mid and small-cap levels.

Select Sectors, MidCap and SmallCap Capped Sectors Value vs. Growth Scores (Size Proportional to Cap)

Sector Key

- Energy
- Materials
- Industrials
- Consumer Discretionary
- Consumer Staples
- Health Care
- Financials
- Info Tech
- Communication Services
- Utilities
- Real Estate

COMMENTARY

- Materials had the highest relative strength among large cap sectors.
- Among large caps, Technology has the highest growth score and Financials has the highest value score.
- Average constituent volatility in the Energy Select Sector is the highest across the cap spectrum.

For details on definitions of fundamental metrics, please refer to the disclosure section. Value and Growth scores are rescored for the S&P Total Market Index universe annually every December.

*Financials & Real Estate SmallCap Capped Sector combines constituents of the GICS Financials and Real Estate sectors.

**Utilities MidCap and SmallCap Capped Sectors include constituents of the GICS Utilities and Communication Services sectors.

Source: S&P Dow Jones Indices LLC and/or its affiliates and FactSet. Data as of September 30, 2020.

COMMENTARY

- Dispersion decreased across most sectors, especially in small-cap Health Care and mid-cap Energy.
- Correlations increased in most sectors, with large spikes in large-cap Info Tech and Materials.
- This combination of lower dispersion and higher correlations favors an environment more suitable to sector allocation.

SECTOR DISPERSION AND CORRELATION

NOTES

- The charts above decomposed volatility into its two main components: dispersion and correlation. The data points are each sector's average monthly value over the trailing 12 months. Trailing annualized volatility is included in parentheses. Index dispersions shown based on stock-level index-weighted dispersion over the calendar month. Index correlation based on single stock daily total returns during each calendar month. See "Implications of Sector Dispersion" for more information.
- See "At the Intersection of Diversification, Volatility and Correlation" for details on the relationship between correlation and dispersion.
- See "Dispersion: Measuring Market Opportunity" for the definition of index dispersion and more information on the uses of dispersion.

Notes On Additional Index Statistics

STATISTIC	NOTES
Price/Earnings (P/E)	Price per share as of observation date divided by earnings per share, calculated by adding the last twelve calendar months' quarterly reported earnings per share.
Price/Book (P/B)	Price per share as of observation date divided by latest annual reported book value per share.
Price/Sales (P/S)	Price per share as of observation date divided by sales per share, calculated by adding twelve calendar months' quarterly reported sales per share.
RSI - 30 Day	RSI is an indicator of the speed and change of price movements and oscillates between zero and 100. RSI is considered overbought when above 70 and oversold when below 30. RS is the average gain divided by average loss over the past 30 days. Then RSI is equal to 100 minus 100 divided by 1+RS.
