Experience the active vs. passive debate on a global scale on [INDEXOLOGY<sup>®</sup>](#).

S&P Dow Jones Indices has been the de facto scorekeeper of the ongoing active versus passive debate since the first publication of the S&P Indices Versus Active (SPIVA) U.S. Scorecard in 2002. The SPIVA South Africa Scorecard measures the performance of actively managed, South African equity and fixed income funds denominated in South African rands (ZAR) against their respective benchmark indices over one-, three-, and five-year investment horizons.

### YEAR-END 2019 HIGHLIGHTS

#### South African Equities

Over 68% of South African active equity funds underperformed the [S&P South Africa 50](#) over the one-year period. The same equity funds fared better when compared to the broader benchmark; 56% outperformed the [S&P South Africa Domestic Shareholder Weighted \(DSW\) Capped Index](#) in 2019.

The difference in fund performance between the two aforementioned benchmarks reflected the strength of South African large-cap stocks in relation to mid and small caps. The large-cap benchmark, the S&P South Africa 50, was up 10.4% in 2019. It outperformed the S&P South Africa DSW Capped Index by over 3% annualized over each of the one-, three-, and five-year periods, demonstrating the tendency of the largest 50 stocks to outperform in recent years.

Local market gains in 2019 were generally buoyed by the global rally following the late 2018 selloff and were not widely viewed as a reflection of economic strength. In fact, the IMF concluded in November 2019 that South Africa faced persistently weak economic growth, deteriorating debt, and major difficulties in its state-owned enterprises.

S&P DJI's series of factor, smart beta, and sector indices within South Africa had a disperse range of outcomes in 2019. Momentum strategies led the field in factors, with the [S&P Momentum South Africa](#) up 28.5% over the calendar year. The [S&P Enhanced Value South Africa Composite Index](#) trailed behind and was down 3.8% over the same period. The S&P South Africa DSW Materials Index posted a strong return of 32.5%, while the S&P South Africa DSW Information Technology Index lost ground and fell 10.6%. Interestingly, the [S&P South Africa DSW Capped Carbon Efficient Index](#) outperformed its benchmark by 2.6% in the year that saw the South African government introduce the Carbon Tax Act.

## Global Equities

South African funds with a global portfolio saw higher returns than those with a domestic focus when measured on an asset-weighted basis—the Global Equity category returned 21.8% for the one-year period. This growth was more than matched by the [S&P Global 1200](#) in local ZAR, with 73% of funds in this category unable to beat it in the year. On an asset-weighted basis, these funds underperformed the global benchmark by 3% in 2019. Similarly, over a three- and five-year period, the annualized asset-weighted returns were below that of the benchmark, by 3% and 2.5%, respectively.

## Fixed Income

Over 73% of funds in the Diversified/Aggregate Bond category were unable to surpass the one-year performance of the [S&P South Africa Sovereign Bond 1+ Year Index](#), which posted gains of over 10% in 2019. This was higher than the benchmark's annualized five-year return of 7.7%. Over both time periods, the returns from the S&P South Africa Sovereign Bond 1+ Year Index outstripped those from the broad local equity index (S&P South Africa DSW Capped Index).

In the Short-Term Bond funds category, 92% of managers were able to outperform the South Africa Short Term Fixed Interest (STeFI) Composite. The ability of these managers to outmaneuver the benchmark persisted across the three- and five-year periods.

## A UNIQUE SCORECARD FOR THE ACTIVE VERSUS PASSIVE DEBATE

Since its first publication 18 years ago, the SPIVA Scorecard has served as the de facto scorekeeper of the active versus passive debate. For more than a decade, we have heard passionate arguments from believers in both camps when headline numbers have deviated from their beliefs.

Over the years, we have built on more than a decade of experience publishing the report by expanding coverage into Canada, India, Japan, Australia, Latin America, and South Africa. While the report will not end the debate on active versus passive investing, we hope to make a meaningful contribution by examining market segments in which one strategy might work better than the other.

Beyond the SPIVA Scorecard's widely cited headline numbers is a rich data set that addresses issues related to measurement techniques, universe composition, and fund survivorship that are less frequently discussed but are often more fascinating. These data sets are rooted in the fundamental principles of the SPIVA Scorecard that regular readers will be familiar with, including the following.

- **Survivorship Bias Correction:** Many funds might be liquidated or merged during a period of study. However, for someone making an investment decision at the beginning of the period, these funds are part of the opportunity set. Unlike other commonly available comparison reports, SPIVA Scorecards account for the entire opportunity set—not just the survivors—thereby eliminating survivorship bias.
- **Asset-Weighted Returns:** Average returns for a fund group are often calculated using only equal weighting, which means the returns of a ZAR 100 billion fund affect the average in the same manner as the returns of a ZAR 100 million fund. An accurate representation of how market participants fared in a particular period can be ascertained by calculating weighted average returns in which each fund's return is weighted by net assets. SPIVA Scorecards show both equal- and asset-weighted averages.
- **Data Cleaning:** SPIVA Scorecards avoid double counting multiple share classes in all count-based calculations by using only the share class with greater assets. Index, leveraged, and inverse funds, along with other index-linked products, are excluded because this is meant to be a scorecard for active managers.

## REPORTS

<b>Report 1: Percentage of South African Funds Outperformed by Benchmarks</b>				
<b>FUND CATEGORY</b>	<b>COMPARISON INDEX</b>	<b>ONE-YEAR (%)</b>	<b>THREE-YEAR (%)</b>	<b>FIVE-YEAR (%)</b>
South African Equity	S&P South Africa DSW Capped Index	44.04	53.30	61.01

## APPENDIX A

### SPIVA Styles and Morningstar Fund Classifications

Data from Morningstar is obtained for all managed funds domiciled in South Africa for which month-end data is available during the performance period. The data includes the most comprehensive South African fund data on active and finalized (merged or liquidated) funds over the chosen period. Funds are classified based on the Morningstar fund classification system, and the SPIVA South Africa Scorecard covers South African and international equity and fixed income categories.

#### International and South African Funds

The SPIVA South Africa Scorecard covers both domestic and international funds that are denominated in South African rands and they have been mapped to the relevant Morningstar fund categories as indicated in this report. The Morningstar classification system produces narrow, style-based classifications for funds, particularly in relation to international equities. S&P Dow Jones Indices has consolidated the style-based categories in order to generate a larger sample size and develop a broad-market comparison to market-based benchmarks. A narrow, style-based comparison would yield a limited sample size, given that value and growth style segments are not consistently discernible over a five-year period.

Morningstar categories have been mapped to SPIVA peer groups in the following manner.

<b>MORNINGSTAR CATEGORY</b>	<b>SPIVA CATEGORY</b>	<b>BENCHMARK INDEX</b>
EAA Fund South Africa & Namibia Equity	South African Equity	S&P South Africa DSW Capped Gross Total Return (ZAR) / S&P South Africa 50 Gross TR ZAR
EAA Fund Global Large-Cap Blend Equity	Global Equity	S&P Global 1200 Gross Total Return (ZAR)
EAA Fund Global Large-Cap Growth Equity		
EAA Fund Global Large-Cap Value Equity		
EAA Fund Global Flex-Cap Equity	Short-Term Bond	South Africa Short Term Fixed Interest (STeFI) Composite Total Return (ZAR)
EAA Fund ZAR/NAD—Short Term Bonds		
EAA Fund ZAR/NAD—Ultra Short Term Bonds	Diversified/Aggregate Bond	S&P South Africa Sovereign Bond 1+ Year Total Return Index (ZAR)
EAA Fund ZAR/NAD—Diversified Bonds		
EAA Fund ZAR/NAD—Flexible Bonds

## APPENDIX B

### Glossary—Reports

#### PERCENTAGE OF FUNDS OUTPERFORMED BY THE INDEX

To correct for survivorship bias, we use the opportunity set available at the beginning of the period as the denominator. We determine the count of funds that have survived and beat the index. We then report the index outperformance percentage.

#### SURVIVORSHIP (%)

The survivorship measure represents the percentage of funds in existence at the beginning of the time period that are still active at the end of the time period.

#### EQUAL-WEIGHTED FUND PERFORMANCE

Equal-weighted returns for a particular style category are determined by calculating a simple average return of all active funds in that category in a particular month.

#### ASSET-WEIGHTED FUND PERFORMANCE

Asset-weighted returns for a particular style category are determined by calculating a weighted average return of all funds in that category in a particular month, with each fund's return weighted by its total net assets. Asset-weighted returns are a better indicator of fund category performance because they reflect the returns of the total money invested in that particular style category with more accuracy.

#### QUARTILE BREAKPOINTS

The  $p$ th percentile for a set of data is the value that is greater than or equal to  $p\%$  of the data but is less than or equal to  $(100-p)\%$  of the data. In other words, it is a value that divides the data into two parts: the lower  $p\%$  of the values and the upper  $(100-p)\%$  of the values. The first quartile is the 75th percentile, which is the value separating the elements of a population into the lower 75% and the upper 25%. The second quartile is the 50th percentile, and the third quartile is the 25th percentile. For fund category quartiles in a particular time horizon, the data used is the return of the largest surviving share class of the fund net of fees, excluding loads.

#### SURVIVORSHIP BIAS

Many funds might liquidate or merge during a period of study. This usually occurs due to continued poor performance by the fund. Therefore, if index returns were compared to fund returns using only surviving funds, the comparison would be biased in favor of the fund category. The SPIVA reports remove this bias in three ways. The first method to remove the bias is to use the entire investment opportunity set, made up of all funds in that particular category at the outset of the period, as the denominator for outperformance calculations. The second is explicitly to show the survivorship rate in each category. The final way is to construct a peer average return series for each category based on all available funds at the outset of the period.

## FEES

The fund returns used are net of fees, excluding loads.

## Indices

A benchmark index provides an investment vehicle against which fund performance can be measured.

### S&P SOUTH AFRICA DOMESTIC SHAREHOLDER WEIGHTED (DSW) CAPPED INDEX

The S&P South Africa Domestic Shareholder Weighted (DSW) Capped Index modifies the [S&P South Africa Domestic Shareholder Weighted \(DSW\) Index](#) to ensure that no single stock weighs more than 10% of the index at each rebalancing. The S&P South Africa Domestic Shareholder Weighted (DSW) Index adjusts the weights of companies in the [S&P South Africa Composite](#) in order to reflect the level of ownership by South African investors. The S&P South Africa Composite is a float-adjusted, market-cap-weighted index that measures the performance of large-, mid-, and small-cap companies listed on the Johannesburg Stock Exchange.

### S&P GLOBAL 1200

Capturing approximately 70% of the world's capital markets, the S&P Global 1200 is a composite of seven headline indices, many of which are accepted leaders in their regions. It includes the [S&P 500<sup>®</sup>](#) (U.S.), [S&P Europe 350](#) (Europe), [S&P/TOPIX 150](#) (Japan), [S&P/TSX 60](#) (Canada), [S&P/ASX All Australian 50](#) (Australia), [S&P Asia 50](#) (Asia Ex-Japan), and [S&P Latin America 40](#) (Latin America).

### SOUTH AFRICA SHORT TERM FIXED INTEREST (STEFI) COMPOSITE

The South Africa Short Term Fixed Interest (STeFI) Composite Index approximates the performance of money market instruments in the market. Instruments such as call deposits and negotiable certificates of deposits (BCD's) represent common, liquid instruments and provide a good proxy of short-term markets.

### S&P SOUTH AFRICA SOVEREIGN BOND 1+ YEAR INDEX

The S&P South Africa Sovereign Bond 1+ Year Index seeks to track the performance of local-currency-denominated sovereign debt publicly issued by the government of South Africa in its domestic market, with maturities of one year or more.
