[Experience](#) the active vs. passive debate on a global scale.

### SUMMARY

Following an initial steep drop and recovery at the onset of the COVID-19 pandemic, equity markets around the world continued their rebound in 2021 as the global economy began to re-open. The [S&P 500<sup>®</sup>](#) had recovered all of its COVID-19-related losses by August 2020, and it posted a 40.8% gain over the 12 months ending on June 30, 2021. Of the 31 distinct benchmarks tracked by this report, 27 finished with a positive return over the year; the exceptions were among longer-term fixed income indices.

The positive market performance broadly translated into good *absolute* returns for active fund managers. But *relative* returns continued to disappoint; **in 15 out of 18 categories of domestic equity funds, the majority of actively managed funds underperformed their benchmarks.** The performance was particularly underwhelming in the small-cap space, as **78% of all small-cap funds lagged the [S&P SmallCap 600<sup>®</sup>](#)** (see Report 1a).

**Exhibit 1: Percent of Domestic Equity Funds Underperforming Benchmarks in Trailing One-Year Period**

It's worth taking a moment to delve deeper into differences across market cap segments. Over the 12-month period, 58% of large-cap funds, 76% of mid-cap funds, and 78% of small-cap funds trailed the S&P 500, [S&P MidCap 400®](#), and S&P SmallCap 600, respectively. At first glance, this isn't particularly new: SPIVA year-end reports have shown that more than 50% of large-cap funds have lagged the S&P 500 [each year for 11 consecutive years](#) (see Report 1a).

However, fund managers in the mid-cap and small-cap segments have often managed to do better than their large-cap counterparts when the large-cap benchmark had a higher return than the respective mid- or small-cap benchmark, in ways that are not consistent with the "greater skill" premise.<sup>1</sup> Instead, it is more likely that mid-cap and small-cap fund managers are quietly edging into the larger-cap space and benefiting from the higher returns available there.

The re-opening gains of early 2021 add one more data point to that hypothesis. As the rest of the market caught up to the large-cap rally of the initial pandemic phase, mid-cap and small-cap managers who tilted up the capitalization scale were caught leaning in the wrong direction. Exhibit 2 shows how quickly many funds fell short of the benchmark.

CATEGORY	YEAR-END 2020	MID-YEAR 2021
S&P 500 Total Return, 12-Month Period (%)	18.40	40.79
S&P MidCap 400 Total Return, 12-Month Period (%)	13.66	53.24
S&P SmallCap 600 Total Return, 12-Month Period (%)	11.29	67.40
Large-Cap Funds Underperforming the S&P 500, 12-Month Period (%)	60.33	58.20
Mid-Cap Funds Underperforming the S&P 400, 12-Month Period (%)	50.68	75.52
Small-Cap Funds Underperforming the S&P 600, 12-Month Period (%)	45.52	78.02

Source: S&P Dow Jones Indices LLC. Data as of June 30, 2021. Past performance is no guarantee of future results. Table is provided for illustrative purposes.

The performance difference across the market cap segments also explains how the majority of large-, mid-, and small-cap funds did worse than their benchmarks, but only 44% of all domestic funds underperformed the [S&P Composite 1500®](#)'s 42.1% gain over the past 12 months. Since the returns were much higher in the mid- and small-cap space, those funds trailed their narrower market cap benchmarks, but they still beat the S&P Composite 1500 in the all-funds comparison (see Report 1a).

We also assess returns of actively managed funds against their benchmarks on a risk-adjusted basis. We consider volatility, calculated through the standard deviation of monthly returns, as a proxy for risk, and use return/volatility ratios to evaluate performance. **After adjusting for risk, the majority of actively managed domestic equity funds in all categories underperformed their benchmarks on a net-of-fees basis over long-term investment horizons.** The few bright spots in the mid-term investment periods were concentrated in mid- and small-cap growth funds and real estate funds (see Report 1b).

<sup>1</sup> For more information on silent style drift, see Ganti, Anu R. and Craig J. Lazzara, "[Style Bias and Active Performance](#)," S&P Dow Jones Indices, March 2021; see also Lazzara, Craig, "[Performance Trickery, part 3](#)," *Indexology® Blog*, April 2020.

More internationally focused funds posted similarly strong absolute returns, but the majority of funds in those categories also lagged their benchmarks, both in absolute and risk-adjusted terms (see Reports 6a and 6b).

In a period of mostly climbing yields, fixed income funds posted better relative results than their benchmarks. In 12 of the 14 categories tracked, the majority of funds outperformed the relevant index benchmark. However, if we widen the lookback window to three years, the majority outperformed in just four categories. For those with a long-term view, **in no fixed income category did the majority of funds manage to surpass their benchmark over a 15-year window** (see Reports 11a and 11b).

### SPIVA SCORES IN SELECTED CATEGORIES

Exhibits 3 through 10 highlight SPIVA scores in selected investment categories, measured both by absolute returns and risk-adjusted returns. One-year SPIVA scores are calculated only in absolute returns, as volatilities calculated from only 12 monthly return data points are not statistically meaningful. While long-term SPIVA scores are calculated up to the 20-year period for domestic and international equities, fixed income scores use a 15-year period due to limited data availability.

## METHODOLOGY

There is nothing novel about the index versus active debate. It has been a contentious subject for decades, and there are strong believers on both sides, with the vast majority of market participants falling somewhere in between. Since its first publication in 2002, the SPIVA Scorecard has served as the de facto scorekeeper of the active versus passive debate. When headline numbers have deviated from their beliefs, we have heard passionate arguments from both camps.

Beyond the SPIVA Scorecard's widely cited headline numbers is a rich data set that often addresses far more fascinating issues—though far less discussed—about measurement techniques, universe composition, and fund survivorship. These data sets are rooted in the following fundamental principles of the SPIVA Scorecard, with which regular readers will be familiar.

- **Survivorship Bias Correction:** Many funds might be liquidated or merged during a period of study. However, for someone making an investment decision at the beginning of the period, these funds are part of the opportunity set. Unlike other commonly available comparison reports, SPIVA Scorecards account for the entire opportunity set—not just the survivors—thereby eliminating survivorship bias.
- **Apples-to-Apples Comparison:** Fund returns are often compared to popular benchmarks such as the S&P 500, regardless of size or style classification. SPIVA Scorecards avoid this pitfall by measuring a fund's returns against the returns of a benchmark appropriate for that particular investment category.
- **Asset-Weighted Returns:** Average returns for a fund group are often calculated using only equal weighting, which results in the returns of a USD 10 billion fund affecting the average in the same manner as the returns of a USD 10 million fund. A more accurate representation of how market participants fared in a particular period is found by calculating weighted average returns where each fund's return is weighted by net assets. SPIVA Scorecards show both equal- and asset-weighted averages.
- **Style Consistency:** SPIVA Scorecards measure style consistency for each style category across different time horizons. Style consistency is an important metric because style drift (the tendency of funds to diverge from their initial investment categorization) can have an impact on asset allocation decisions.
- **Data Cleaning:** SPIVA Scorecards avoid double counting multiple share classes in all count-based calculations, using only the share class with most assets. Since this is meant to be a scorecard for active managers, it excludes index funds, leveraged and inverse funds, and other index-linked products.

## REPORTS

Report 1a: Percentage of U.S. Equity Funds Underperforming Their Benchmarks – Absolute Returns						
FUND CATEGORY	COMPARISON INDEX	1-YEAR (%)	3-YEAR (%)	5-YEAR (%)	10-YEAR (%)	20-YEAR (%)

## APPENDIX A

### SPIVA Styles and Lipper Fund Classifications

The CRSP Survivor-Bias-Free US Mutual Fund Database is the only complete database of both active and liquidated or merged mutual funds. It was created in 1995 and contains fund data from December 1961. Current and historical data from August 1998 has been supplied by Lipper and Thomson Reuters. The fund classifications are based upon the Lipper fund classification system. The SPIVA Scorecard covers domestic equity, global equity, and global fixed income categories.

#### U.S. Equity

SPIVA covers major capitalization levels (large-, mid-, small-, and multi-cap funds) and investment styles (growth, core, and value). S&P Dow Jones Indices uses the Lipper fund classifications, which determine a fund portfolio's capitalization and investment style assignments.

Lipper assigns a market capitalization to each fund based on the percentages of a fund's three-year weighted equity assets that fall into each of Lipper's three defined market capitalization slices. The market capitalization breakpoints are calculated using all common stocks, excluding all non-U.S. domiciled stocks and ADRs, trading on the NYSE, AMEX, and NASDAQ. Funds are assigned to the capitalization level in which they have a 75% or higher weighting. Any fund that has less than 75% of its three-year weighted allocation in any of the three market capitalization ranges is classified as a multi-cap fund.

For investment style selection, the Lipper classification system uses three-year fundamental portfolio characteristics (price/earnings, price/book, and three-year sales-per-share growth) and, if necessary, confirming secondary characteristics (price-to-sales and price-to-operating cash flow). Fund statistics are compared to their relevant S&P Dow Jones Indices capitalization-level index to determine the growth, core, or value style.

In some cases, S&P Dow Jones Indices combines closely related Lipper fund classifications in one SPIVA category. Exhibit A1 maps the SPIVA U.S. Equity fund categories to Lipper classifications.

**Exhibit A1: U.S. Equity Category Mappings**

SPIVA CATEGORY	LIPPER FUND CLASSIFICATION
Large-Cap Growth Funds	Large-Cap Growth Funds
Large-Cap Core Funds	Large-Cap Core Funds

Multi-Cap Value Funds	Multi-Cap Value Funds
Real Estate Funds	Real Estate Funds

Source: S&P Dow Jones Indices LLC, Lipper. Table is provided for illustrative purposes.

### International Equity

For international equity, SPIVA reports on four major categories (global, international, international small-cap, and emerging markets) of interest to global asset allocators. These categories also include multiple Lipper capitalization and style classifications.

**Exhibit A2: Global Equity Category Mappings**

SPIVA CATEGORY	LIPPER FUND CLASSIFICATION
Global Funds	Global Large-Cap Growth Funds

## Fixed Income

SPIVA reports on nine domestic, two global, and three municipal fixed income categories. The Lipper domestic fixed income classifications are based on maturity and credit quality. For maturity, long is over 10 years, intermediate is 5-10 years, short/intermediate is 1-5 years, and short is 1-3.5 years. For credit quality, bonds are assigned to U.S. Treasury, U.S. government (includes government and agency issues), A- or BBB-rated (according to Lipper fund rating methodology), loan participations, and high yield classifications. Lipper also includes U.S. mortgages and Government National Mortgage Association (GNMA) classifications.

In global fixed income, Lipper differentiates between global (including the U.S.) and international (excluding the U.S.) objectives. For municipal debt funds, we include the general classification (invests in the top four credit ratings) plus two state funds (California and New York).

## **APPENDIX B: GLOSSARY**

### **Percentage of Funds Underperforming the Index**

To correct for survivorship bias, we use the opportunity set available at the beginning of the period as the denominator. We determine the count of funds that have survived and beat the index. We then report the index outperformance percentage.

### **Survivorship (%)**

This measure represents the percentage of funds in existence at the beginning of the time period that is still active at the end of the time period.

### **Style Consistency (%)**

This calculation shows the percentage of funds that had the same style classification at the end of the time period as at the beginning of the time period.

### **Equal-Weighted Fund Performance**

Equal-weighted returns for a particular style category are determined by calculating a simple average return of all active funds in that category in a particular month.

### **Asset-Weighted Fund Performance**

Asset-weighted returns for a particular style category are determined by calculating a weighted average return of all funds in that category in a particular month, with each fund's return weighted by its total net assets. Asset-weighted returns are a better indicator of fund category performance because they more accurately reflect the returns of the total money invested in that particular style category.

### **Quartiles Breakpoints**

The  $p^{\text{th}}$  percentile for a set of data is the value that is greater than or equal to  $p\%$  of the data, but is less than or equal to  $(100 - p)\%$  of the data. In other words, it is a value that divides the data into two parts: the lower  $p\%$  of the values and the upper  $(100-p)\%$  of the values. The first quartile is the 75<sup>th</sup> percentile, the value separating the elements of a population into the lower 75% and the upper 25%. The second quartile is the 50<sup>th</sup> percentile and the third quartile is the 25<sup>th</sup> percentile. For fund category quartiles in a particular time horizon, the data used is the return of the largest share class of the fund net of fees, excluding loads.

### **Survivorship Bias**

Many funds might liquidate or merge during a period of study. This usually occurs due to continued poor performance by the fund. Therefore, if index returns were compared to fund returns using only surviving funds, the comparison would be biased in favor of the fund category. These reports remove this bias by (a) using the entire investment opportunity set, made up of all funds in that particular category at the outset of the period, as the denominator for outperformance calculations, (b) explicitly showing the survivorship rate in each category, and (c) constructing peer average return series for each category based on all available funds at the outset of the period.

**Fees**

The fund returns used are net of fees, excluding loads.

**INDICES<sup>2</sup>**

A benchmark index provides an investment vehicle against which fund performance can be measured.

**U.S. Equity****S&P 500**

Widely regarded as the best single gauge of the U.S. equities market, this market-capitalization-weighted index includes a representative sample of 500 leading companies in the foremost industries of the U.S. economy and provides over 80% coverage of U.S. equities.

**S&P MIDCAP 400**

This index consists of 400 mid-sized companies and covers approximately 7% of the U.S. equities market.

**S&P SMALLCAP 600**

This index consists of 600 small-cap stocks and covers approximately 3% of the U.S. equities market.

**S&P COMPOSITE 1500**

This is a broad, market-capitalization-weighted index of 1500 stocks. This index is comprised of three size-based indices: the S&P 500, S&P MidCap 400, and S&P SmallCap 600, which measure the performance of large-, mid-, and small-cap stocks, respectively. This index represents 90% of U.S. equities.

**S&P 500 GROWTH AND VALUE INDICES**

These indices form an exhaustive, multi-factor style series covering the entire market capitalization of the S&P 500. Constituents, weighted according to market capitalization, are classified as growth, value, or a mix of growth and value.

**S&P MIDCAP 400 GROWTH AND VALUE INDICES**

These indices form an exhaustive, multi-factor style series covering the entire market capitalization of the S&P MidCap 400.

**S&P SMALLCAP 600 GROWTH AND VALUE INDICES**

These indices form an exhaustive, multi-factor style series covering the entire market capitalization of the S&P SmallCap 600.

## S&P COMPOSITE 1500 GROWTH AND VALUE INDICES

These indices form an exhaustive, multi-factor style series covering the entire market capitalization of the S&P Composite 1500.

### S&P UNITED STATES REIT

This index measures the investable universe of publicly traded real estate investment trusts.

## International Equity

### S&P GLOBAL 1200

Capturing approximately 70% of the world's capital markets by market capitalization, the S&P Global 1200 is a composite of seven headline indices, many of which are accepted leaders in their regions. It includes the S&P 500 (U.S.), [S&P Europe 350®](#) (Europe), [S&P/TOPIX 150](#) (Japan), [S&P/TSX 60](#) (Canada), [S&P/ASX All Australian 50](#) (Australia), [S&P Asia 50](#) (Asia Ex-Japan), and [S&P Latin America 40](#) (Latin America).

### S&P INTERNATIONAL 700

This index measures the non-U.S. component of the global equity markets, covering all the regions included in the S&P Global 1200, excluding the U.S. (S&P 500).

### S&P DEVELOPED EX-U.S. SMALLCAP

This index represents the small-cap segment—the bottom 15% by size—of the world's universe of institutionally investable securities, excluding the U.S.

### S&P/IFCI COMPOSITE

This index is widely recognized as a comprehensive and reliable measure of the world's emerging markets. It measures the returns of stocks that are legally and practically available to foreign market participants.

## Fixed Income<sup>3</sup>

### BARCLAYS CAPITAL LONG GOVERNMENT BOND INDEX

This index consists of U.S. Treasury and U.S. government agency bonds with maturities greater than 10 years.

### BARCLAYS CAPITAL INTERMEDIATE GOVERNMENT BOND INDEX

This index consists of U.S. Treasury and U.S. government agency bonds with maturities from 1 to 10 years.

<sup>3</sup> Barclays Capital Fixed Income Indices were formerly the Lehman Brothers Indices.

**BARCLAYS CAPITAL 1-3 YEAR GOVERNMENT BOND INDEX**

This index consists of U.S. Treasury and U.S. government agency bonds with maturities from one to three years.

**BARCLAYS CAPITAL LONG GOVERNMENT/CREDIT BOND INDEX**

This index covers corporate and non-corporate fixed income securities that are rated investment grade and have maturities greater than 10 years.

**BARCLAYS CAPITAL INTERMEDIATE GOVERNMENT/CREDIT BOND INDEX**

This index covers corporate and non-corporate fixed income securities that are rated investment grade with maturities from 1 to 10 years.

**BARCLAYS CAPITAL 1-3 YEAR GOVERNMENT/CREDIT BOND INDEX**

This index covers corporate and non-corporate fixed income securities that are rated investment grade and have one to three years until their final maturity.

**BARCLAYS CAPITAL HIGH YIELD BOND INDEX**

This index includes all fixed income securities with a maximum quality rating of Ba1/BB+ (including defaulted issues), a minimum amount outstanding of USD 100 million, and at least one year to maturity.

**BARCLAYS CAPITAL BROTHERS MORTGAGE-BACKED SECURITIES INDEX**

This index includes 15- and 30-year fixed-rate securities backed by mortgage pools of the Government National Mortgage Association (GNMA), Federal Home Loan Mortgage Corporation (FHLMC), and Federal National Mortgage Association (FNMA).

**BARCLAYS CAPITAL GLOBAL AGGREGATE BOND INDEX**

This index covers the most-liquid portion of the global investment-grade, fixed-rate bond market, including government, credit, and collateralized securities.

**BARCLAYS CAPITAL EMERGING MARKETS INDEX**

This index includes fixed- and floating-rate U.S. dollar-denominated debt from emerging markets.

**S&P NATIONAL AMT-FREE MUNICIPAL BOND INDEX**

This index is a broad, comprehensive, market-value-weighted index designed to measure the performance of the investment-grade U.S. municipal bonds that are exempt from the Alternative Minimum Tax.

**S&P CALIFORNIA AMT-FREE MUNICIPAL BOND INDEX**

This index is designed to measure the performance of the investment-grade California municipal bonds that are exempt from the Alternative Minimum Tax.

### S&P NEW YORK AMT-FREE MUNICIPAL BOND INDEX

This index is designed to measure the performance of the investment-grade New York bonds that are exempt from the alternative minimum tax.

### S&P/LSTA U.S. LEVERAGED LOAN 100 INDEX

This index is designed to reflect the performance of the largest facilities in the floating-rate bank loan, or senior loan, market.

This document does not constitute an offer of services in jurisdictions where S&P Dow Jones Indices LLC, S&P Global, Dow Jones or their respective affiliates (collectively "S&P Dow Jones Indices") do not have the necessary licenses. Except for certain custom index calculation services, all information provided by S&P Dow Jones Indices is impersonal and not tailored to the needs of any person, entity or group of persons. S&P Dow Jones Indices receives compensation in connection with licensing its indices to third parties and providing custom calculation services. Past performance of an index is not an indication or guarantee of future results.

It is not possible to invest directly in an index. Exposure to an asset class represented by an index may be available through investable instruments based on that index. S&P Dow Jones Indices does not sponsor, endorse, sell, promote or manage any investment fund or other investment vehicle that is offered by third parties and that seeks to provide an investment return based on the performance of any index. S&P Dow Jones Indices makes no assurance that investment products based on the index will accurately track index performance or provide positive investment returns. S&P Dow Jones Indices is not an investment advisor, and S&P Dow Jones Indices makes no representation regarding the advisability of investing in any such investment fund or other investment vehicle. A decision to invest in any such investment fund or other investment vehicle should not be made in reliance on any of the statements set forth in this document. Prospective investors are advised to make an investment in any such fund or other vehicle only after carefully considering the risks associated with investing in such funds, as detailed in an offering memorandum or similar document that is prepared by or on behalf of the issuer of the investment fund or other investment product or vehicle. S&P Dow Jones Indices LLC is not a tax advisor. A tax advisor should be consulted to evaluate the impact of any tax-exempt securities on portfolios and the tax consequences of making any particular investment decision. Inclusion of a security within an index is not a recommendation by S&P Dow Jones Indices to buy, sell, or hold such security, nor is it considered to be investment advice. Closing prices for S&P Dow Jones Indices' US benchmark indices are calculated by S&P Dow Jones Indices based on the closing price of the individual constituents of the index as set by their primary exchange. Closing prices are received by S&P Dow Jones Indices from one of its third party vendors and verified by comparing them with prices from an alternative vendor. The vendors receive the closing price from the primary exchanges. Real-time intraday prices are calculated similarly without a second verification.
