S&P 500® Currency Hedged Indices are designed to represent the returns of index strategies that involve hedging currency risk while accepting underlying equity market risk. By employing such a strategy, the index seeks to reduce the risk of downward currency fluctuations while also sacrificing potential currency gains.

Description

S&P 500® Currency Hedged Indices are designed to represent the returns of index strategies that involve hedging currency risk while accepting underlying equity market risk. By employing such a strategy, the index seeks to reduce the risk of downward currency fluctuations while also sacrificing potential currency gains.

Index Attributes

The S&P 500 EUR Hedged uses a currency-hedged strategy to reduce the risk of currency fluctuations, although potential currency gains may be sacrificed. We adjust the amount hedged on a monthly basis.

Created in 1957, the S&P 500 was the first broad U.S. market-cap-weighted stock market index. Today, it’s the basis of many listed and over-the-counter investment instruments. This world-renowned index includes 500 of the top companies in leading industries of the U.S. economy. Focusing on the large-cap segment of the market, the S&P 500 covers approximately 80% of available U.S. market cap.

Methodology Construction

The index is a subindex of the S&P 500. The methodology snapshot that follows applies to the S&P 500.

• **Universe.** All constituents must be U.S. companies.

• **Eligibility Market Cap.** To be included, companies must have an unadjusted market cap of USD 8.2 billion or greater.

• **Public Float.** Companies must have a float market cap of at least USD 4.1 billion.

• **Financial Viability.** Companies must have positive as-reported earnings over the most recent quarter, as well as over the most recent four quarters (summed together).

• **Adequate Liquidity and Reasonable Price.** Using composite pricing and volume, the ratio of annual dollar value traded (defined as average closing price over the period multiplied by historical volume) to float-adjusted market capitalization should be at least 1.00, and the stock should trade a minimum of 250,000 shares in each of the six months leading up to the evaluation date.

• **Sector Representation.** Sector balance, as measured by a comparison of each GICS sector’s weight in an index with its weight in the S&P Total Market Index, in the relevant market capitalization range, is also considered in the selection of companies for the indices.

• **Company Type.** All eligible U.S. common equities listed on eligible U.S. exchanges can be included. REITs are also eligible for inclusion. Closed-end funds, ETFs, ADRs, ADS, and certain other types of securities are ineligible for inclusion.

All information for an index prior to its Launch Date is back-tested, based on the methodology that was in effect on the Launch Date. Back-tested performance, which is hypothetical and not actual performance, is subject to inherent limitations because it reflects application of an Index methodology and selection of index constituents in hindsight. No theoretical approach can take into account all of the factors in the markets in general and the impact of decisions that might have been made during the actual operation of an index. Actual returns may differ from, and be lower than, back-tested returns.
