

## Description

The S&P/TSX High Income Energy Index measures the performance of high-yielding stocks in the Canadian energy sector.

## Index Attributes

The Canadian energy sector offers a competitive yield relative to other economic sectors. By focusing on including only high-yielding stocks within the sector, the S&P/TSX High Income Energy Index is designed to track pure sector exposure with enhanced dividend yield.

## Methodology Construction

- **Universe.** To be eligible for inclusion in the S&P/TSX High Income Energy Index, a stock must be part of the S&P/TSX Composite and be classified as part of the GICS energy sector.
- **Constituent Selection.** Must have a dividend yield of at least 2% at time of inclusion in the index.
- **Weighting.** Index constituents are weighted by float-adjusted market cap, subject to a 5% cap for each stock. Caps are established at the quarterly rebalancing and are not revised until the next quarterly rebalancing.
- **Liquidity.** Must demonstrate adequate liquidity as measured by float turnover (total number of shares traded in Canadian markets over the previous 12 months divided by float-adjusted shares outstanding at the end of the period).
- **Quarterly Rebalancing.** At rebalance, the indicated annual 12-month dividend yield of each security is computed. While securities with yields higher than 2% form the index, current constituents will not be deleted from the index unless the indicated dividend yield drops below 1.5%.

## Quick Facts

WEIGHTING METHOD	Float-adjusted market cap weighted
REBALANCING FREQUENCY	Quarterly in March, June, September, and December
CALCULATION FREQUENCY	Real time
CALCULATION CURRENCIES	CAD, USD
LAUNCH DATE	July 22, 2013
FIRST VALUE DATE	April 21, 2006
REGULATORY AUTHORIZATION	European Union

All information for an index prior to its Launch Date is back-tested, based on the methodology that was in effect on the Launch Date. Back-tested performance, which is hypothetical and not actual performance, is subject to inherent limitations because it reflects application of an Index methodology and selection of index constituents in hindsight. No theoretical approach can take into account all of the factors in the markets in general and the impact of decisions that might have been made during the actual operation of an index. Actual returns may differ from, and be lower than, back-tested returns.
